KILLINGIT · LLM BENCHMARK

Prompt Benchmark

Two coaching tasks, all 285 selected models on OpenRouter. Same athlete, two prompts: a single day on Friday 30 October 2026, and a season revision on Sunday 1 November 2026 after the Atlas Mountain Race on 28 February 2027 became the next goal. Every valid response is scored by anthropic/claude-haiku-5.5.

MODELS	VALID ON BOTH	UNGRADED (SPEED F)	HARD-GATE FAILURES	AVERAGE SCORE (VALID)
285	162	1	182	8.6

What was tested. This report combines `2026-11-01-cost-a-plus-v2` and `2026-11-01-above-a-plus`; a later run replaces an earlier result for the same model. Each model received `benchmarks/prompts/today-prompt.txt` and `benchmarks/prompts/revise-season-prompt.txt` verbatim, in two separate calls. The today prompt asks for only the plan for 2026-10-30. The revision prompt asks for a refreshed season, current block, week and day after the athlete set the Atlas Mountain Race on 28 February 2027 as the next goal. Both prompts contain the full athlete profile, recent activities and coach analyses, the current plan, the athlete's latest metrics, and the weather forecast. A model needed a retry when a response was not parseable or did not match its contract. 145 models needed at least one retry. 123 models did not return valid JSON on both prompts; they remain in the tables with a score of 0 and their provider error, except the 1 models that reached the 20-minute speed-F limit. Those were stopped and recorded with ability ? instead of F, and are omitted from scoring.

Hard gates on the season revision. Ability is F for any model that does not mention Atlas anywhere in its output, leaves block 1 unchanged without asking an Atlas coach question, or changes the start date of block 1 (2026-10-21). The gates are checked mechanically against the supplied current block, not by the judge. 182 models failed at least one gate.

How quality was judged. Every valid JSON response was read and scored by anthropic/claude-haiku-5.5 (OpenRouter) with a rubric for its prompt, not by a code pattern matcher. Each prompt is scored out of 12.5 across contract compliance (1.5), fidelity (2.0), design (3.0), rationale (2.0), grounding (2.0), and extra, useful detail (2.0). The combined score is the mean of the two prompt scores; each component keeps the weaker of the two values, so a failing component in either prompt grades the model F. Time and cost are the sum of both prompt runs, including retries. Judge cost: $1.2410. Ability, speed and cost

> grades use the same bands as the app catalog; a model stopped at the 20-minute speed-F limit is shown as ability ?.

SUMMED MODEL TIME	TOTAL COST	BEST SCORE	WITHIN 0.3 OF BEST
817.0 min	**$12.3342**	**10.8**	**4**

Run `2026-11-01-combined` · generated 2026-11-01 · model costs are OpenRouter-reported, including retries · times are the sum of both prompts · judge: anthropic/claude-haiku-5.5.

All models

Ranked by combined judged quality, then by cost. Time and cost include both prompts and any retry.

Models close to the best

Every model scoring within 0.3 points of the best (10.8), ranked by quality and then cost. This is the practical shortlist: the plans that are close to as good as the best one on both prompts.

RANK	MODEL	ABILITY	SPEED	COST GRADE	SCORE /12.5	TIME	RUN COST	GATES
1	google/gemini-4-argon	A	A	C	**10.8**	76.7 s	$0.1134	pass
2	openai/gpt-6.1-sol	A	A	B	**10.6**	79.1 s	$0.0572	pass
3	unbiased/pareto-26.9	A	B	B	**10.5**	124.9 s	$0.0452	pass
4	x-ai/grok-4.7	A	E	D	**10.5**	640.8 s	$0.1832	pass

Best value in the shortlist

TOP 10 CHEAPEST

#	MODEL	ABILITY	SPEED	COST GRADE	SCORE /12.5	RUN COST	TIME
1	unbiased/pareto-26.9	A	B	B	**10.5**	$0.0452	124.9 s

3	google/gemini-4-argon	A	A	C	**10.8**	$0.1134	76.7 s
4	x-ai/grok-4.7	A	E	D	**10.5**	$0.1832	640.8 s

TOP 10 FASTEST

#	MODEL	ABILITY	SPEED	COST GRADE	SCORE /12.5	TIME	RUN COST
1	google/gemini-4-argon	A	A	C	**10.8**	76.7 s	$0.1134
2	openai/gpt-6.1-sol	A	A	B	**10.6**	79.1 s	$0.0572
3	unbiased/pareto-26.9	A	B	B	**10.5**	124.9 s	$0.0452
4	x-ai/grok-4.7	A	E	D	**10.5**	640.8 s	$0.1832

Both lists are restricted to the shortlist above. A zero cost is an OpenRouter free or zero-priced model.

Model-by-model

One section per model in rank order. Each shows the sum of both prompts, the hard gates, and then each prompt's score, judgment and JSON exactly as returned (pretty-printed).

#1

google/gemini-4-argon

Google: Gemini 4 Argon

10.8/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
A	A	C	76.7 s	$0.1134	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00759	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.4/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.7/2

Combined judgment: Today plan: The JSON is valid and matches the requested today object, and the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 30 TSS and 220 W FTP all agree with the plan. The session is well built for a back-protective hinge progression, with knee-height pulls, two split-squat sets, rest intervals tied to heart rate, and a mobility finish, though the phrase holding a rack or Upright is a sloppy typo and the stated timing adds up to about 48 minutes. The rationale names the posterior-chain and sit-bone goals and what is lost by skipping, and the description draws on Tuesday's goblet squats and Thursday's rest day from the input. Season revision: The response names Atlas throughout the season and block, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and the later blocks tile contiguously to 2027-08-29 with PBP and the April 200 km preserved. Today's 60-minute indoor session has intervals that sum correctly and carries a sensible FTP-based power and cadence prescription. Weaknesses: the Atlas taper block runs through the race date, the 300 km and 400 km and 600 km qualifiers are invented rather than supplied, and past sessions such as Wednesday and Saturday were edited without need. The rationale also contains a small factual slip about the last ride.

TODAY PLAN

11.3/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
19.8 s	$0.0404	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 2.0/2 · Design 2.5/3 · Rationale 1.8/2 · Grounding 1.7/2 · Detail 1.8/2

Judgment: The JSON is valid and matches the requested today object, and the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 30 TSS and 220 W FTP all agree with the plan. The session is well built for a back-protective hinge progression, with knee-height pulls, two split-squat sets, rest intervals tied to heart rate, and a mobility finish, though the phrase holding a rack or Upright is a sloppy typo and the stated timing adds up to about 48 minutes. The rationale names the posterior-chain and sit-bone goals and what is lost by skipping, and the description draws on Tuesday's goblet squats and Thursday's rest day from the input.

    "description": "Warm-up (8 min): 5 min easy incline treadmill walk or stair machine (HR 100–120 bpm), followed by 10 bodyweight hip airplanes or glute bridges and 6/side quadruped bird-dogs.\n\nMain Lifting
```

```
Circuit (32 min): Take a full 90–120 seconds of rest between every set and wait until your heart rate drops below 110 bpm before starting the next set.\n1. Elevated Rack Pull or High-Handle Trap-Bar Deadlift (set at knee height to protect your lower back while teaching a clean hip hinge): 1 warm-up set of 10 reps at 30 kg, then 3 working sets of 8–10 controlled reps at 40–45 kg. Brace your core, hinge at the hips with a flat back, and stop immediately if you feel any lower-back strain.\n2. Bodyweight Split Squat (holding a rack or Upright for balance): 2 sets of 8 reps per leg. Capping at 2 unweighted sets protects your quads after Tuesday's goblet squats while stretching the rear-leg hip flexors.\n3. Seated Cable Row (neutral grip): 3 sets of 10–12 reps at 35–45 kg, pausing for 1 second with shoulder blades squeezed together.\n4. Dumbbell Farmer's Carry: 3 walks of 35–40 seconds holding 16–20 kg dumbbells at your sides, walking tall with ribs stacked over hips.\n5. Dead Bug: 3 sets of 8 slow reps per side, pressing your lower back firmly into the floor throughout.\n\nPost-Workout Unrecorded Daily Mobility (8 min, stop watch first): 90s/side couch stretch, 90s soft-knee standing forward fold, 90s 90/90 hip rotations, 90s supported deep squat hold, 90s supine figure-4 glute stretch, and 60s slow cat-cow.\n\nNutrition & Appetite Tip: Have a protein-rich snack (such as skyr or cottage cheese) 60–90 minutes before finishing work so you enter the gym and evening dinner well-satiated.",
    "optional": false,
    "optionalRationale": "This session directly builds the posterior-chain and anti-extension core endurance required to hold a more forward, aerodynamic pelvic tilt on the bike without lower-back pain or excessive weight on your sit bones during next spring's brevets and Paris-Brest-Paris, while preserving lean muscle mass as you lose body fat. Skipping it forfeits one of only two weekly strength stimuli in this foundation block and delays the structural hip-hinge adaptation that protects your back during both long climbs and everyday crouching work.",
    "rationale": "After Thursday's full recovery day, your legs and lower back are fresh to introduce the second half of your weekly gym split. Using knee-height rack or trap-bar pulls safely patterns your hip hinge without forcing you into the deep floor position that irritates your lower back, while keeping split squats to two bodyweight sets respects the quad adaptation observed during Tuesday's goblet squats. Disciplined 90–120 second rest intervals (<110 bpm) keep systemic stress low so this session supports lean-mass preservation and fat loss without triggering post-workout evening hunger."
  }
}

SEASON REVISION

10.3/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
56.9 s	**$0.0730**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.4/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.7/2

Judgment: The response names Atlas throughout the season and block, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and the later blocks tile contiguously to 2027-08-29 with PBP and the April 200 km preserved. Today's 60-minute indoor session has intervals that sum correctly and carries a sensible FTP-based power and cadence prescription. Weaknesses: the Atlas taper block runs through the race date, the 300 km and 400 km and 600 km qualifiers are invented rather than supplied, and past sessions such as Wednesday and Saturday were edited without need. The rationale also contains a small factual slip about the last ride.

{
  "season": {
    "goal": "Complete the Atlas Mountain Race starting February 28, 2027, followed by the spring randonneur brevet series (starting with a 200 km in April) and Paris-Brest-Paris in August 2027, using sustainable 3-to-4-month training cycles with deliberate mental and physical resets to prevent burnout.",
    "rationale": "Your primary calendar focus is the ultra-distance Atlas Mountain Race on February 28, 2027, which precedes your April 200 km brevet and August Paris-Brest-Paris. Because your training history shows that disciplined progression holds for a maximum of four months before stagnation or burnout sets in, the season is structured around a focused four-month preparation cycle into late February, immediately followed by a deep recovery and mental reset block in March. By the time you reach the April 200 km brevet, the endurance base from your Atlas Mountain Race build will easily carry you through the distance, turning the spring brevets into low-pressure qualification and pacing practice on the road to Paris-Brest-Paris.",

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
A	A	B	79.1 s	$0.0572	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00717	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.7/2 · Design 2.5/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.7/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and the 220 W FTP, matching the Friday gym session in the current plan. The exercise list is specific, with sets, reps, reserve guidance, rest periods, stop conditions and a fallback for the hinge, though the added chest press and the 40 kg pulldown are not in the plan. The rationale is accurate but generic on fat loss and hunger, while the optionalRationale names the concrete loss from skipping, and the response honestly notes that back symptoms and working loads were not reported. Season revision: Atlas is named in the season goal, block summaries and week and today rationales, block 1 starts on 2026-10-21 and is genuinely revised, the season blocks tile contiguously to 2027-08-31, and tomorrow, nextWeek, nextBlock and bodyMetrics are kept null or empty as required. The trainer workout's power targets (101, 124, 135 W) correctly match 45, 55 and 60 percent of 225 W and sum to 40 minutes. Weaknesses: the block name and focus never mention Atlas, the Atlas Event block lists 3 weeks across roughly two calendar weeks, past session titles and TSS values were quietly rewritten, and today's session was swapped from the supplied run to a trainer ride without explanation in the rationale. Some block rationale text reads as meta-commentary about week labelling.

    "description": "Use your gym for a controlled, pain-free session. Since your current back symptoms and hinge working weight are not reported, start conservatively and do not increase loads today.\n\nWarm-up — 5 minutes: easy stationary cycling, then 8 supported bodyweight hip hinges and 5 shallow split squats per side.\n\nStrength — approximately 32 minutes:\n1. Elevated rack or trap-bar pull: 2 × 8 from approximately knee height, using a light implement you can lift comfortably with at least 4 repetitions in reserve. Practise an unloaded hinge first; if you cannot keep the movement comfortable and controlled, use 2 × 12 glute bridges instead. Do not force an empty Olympic bar if it is too heavy.\n2. Supported bodyweight split squat: 2 × 8 per side, using a shallow, comfortable range. Keep both sets easy enough to leave 3–4 repetitions in reserve.\n3. Lat pulldown: 2 × 10 at 40 kg, reducing the load if needed to leave 3 repetitions in reserve.\n4. Machine chest press: 2 × 10 at a light load that leaves 3–4 repetitions in reserve.\n5. Pallof press: 2 × 10 per side, pausing briefly with your arms extended without rotating your trunk.\n\nRest 90–120 seconds between compound sets and about 60 seconds between Pallof sets; start again when your breathing is comfortable rather than chasing a heart-rate threshold. Stop any movement that causes back or joint pain, and avoid grinding repetitions.\n\nFinish — 8 minutes of gentle mobility: low lunge, soft-knee forward fold, 90/90 hip rotations, supported squat hold, supine figure-4 stretch, and cat-cow. Stay within comfortable ranges rather than forcing flexibility.",
    "rationale": "Your manageable quad burn on Tuesday and comfortable run/walk and rowing on Wednesday support a second conservative strength exposure after Thursday's scheduled recovery. Low-volume leg work, a carefully supported hinge progression, and trunk control build the strength you need to tolerate cycling posture and long climbs without exhausting your legs before the weekend. Strength training also helps preserve muscle during gradual fat loss.",
    "optional": false,
    "optionalRationale": "This session builds posterior-chain strength, anti-rotation control, and whole-body loading tolerance for your longer-term brevet and Paris-Brest-Paris preparation. Within your Autumn Re-Entry block and approximately 5–5.5 hours of structured training this week, it provides your second strength stimulus without adding hard endurance work. Skipping it would remove that second opportunity to develop back-tolerant movement and preserve muscle while you pursue fat loss."
  }
}

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build consistent cycling exposure, aerobic durability and sustainable strength habits before
adding substantial intensity.",
    "rationale": "Your recent hiking, easy running and rowing show that you tolerate controlled aerobic
work, and your strength sessions provide useful supporting load. However, the current week contains no
recorded cycling before today, so cycling consistency and saddle tolerance are more valuable now than
threshold intervals. The earlier three-hour Zwift race and additional leg loading also favor a measured
progression. Keep most riding conversational, generally below 140 bpm, using power to prevent surges rather
than forcing power when your heart rate or perceived effort rises. Aim for a comfortable cadence around 85–
95 rpm on easy flat trainer work without forcing an unnatural rhythm. Establish three repeatable rides
before extending the longest ride, retain one purposeful strength session, and use a second only when
recovery is good. Recovery weeks and varied aerobic options support your longer-term adherence. Your FTP
remains anchored to your stated 225 W; later small projections are conditional planning estimates, not
measurements. Week labels follow Monday-start calendar weeks, with the first week clipped to the block's 21
October start.",

10.5/12.5

Pareto 26.9

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
A	B	B	124.9 s	$0.0452	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00700	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.5/1.5 · Fidelity 1.7/2 · Design 2.4/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, matches the required today object, and keeps the date, planned status, 45-minute moderate gym workout, 30 TSS, 220 W FTP and null bikeWorkout consistent with the plan. The exercise selection is sensible and respects the back-protection constraints, with specific sets, reps and a rest rule tied to the athlete's heart-rate feedback. Weaknesses are that load guidance for the rack pulls and goblet squats is thin, there are no stop conditions or pain fallbacks, and the mobility circuit is named but not described, while the rationale leans on a strong claim that this is the primary fix for back pain rather than tying the session to the fat-loss goal. Season revision: The candidate names Atlas throughout the season and block, keeps block 1 starting on 2026-10-21, and gives block 1 genuinely new weeks, so the three hard requirements are met. The season tiles contiguously from October 2026 to August 2027 and explicitly handles the four-month adherence limit, the Atlas taper and the post-race recovery. Weaknesses: the season end date of 2027-08-31 is an assumption, the block 1 weeks are conservative to the point of little cycling progression for a long-distance goal, and the Sunday trainer session with its power targets (135, 146 and 113 W) is consistent with the 225 W FTP and the weather, but the week's past-day session titles were renamed rather than kept as supplied. The weekly TSS total of about 194 checks out against the session estimates.

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build repeatable cycling frequency and aerobic durability while keeping strength, cross-
training, and recovery sustainable.",
    "rationale": "Your controlled rides and positive feedback support easy aerobic training, but this week's
completed endurance has mainly been on foot. Regular saddle time is therefore the first priority for Atlas
and your later brevets. Your recent three-hour race and substantial hiking also show why total load matters
even when cycling volume is low. You will establish three manageable cycling exposures before extending the
long ride, keep strength away from failure, and introduce moderate work only when easy riding is repeatable.
Recovery weeks and a minimum sustainable routine of two purposeful rides plus brief strength help you avoid
an all-or-nothing training pattern. Your FTP remains an uncertain 225 W baseline; small later projections
depend on completed cycling, not on hiking, running power, or planned training alone.",

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.6/2

Combined judgment: Today plan: The response is clean valid JSON with only the requested today object, and it matches the planned 2026-10-30 moderate 45-minute indoor gym session with correct status, TSS, FTP and indoor flags. The exercise selection is sensible for this athlete's lower-back and quad constraints: a knee-height pull, capped bodyweight split squats, a seated row and dead bugs, with explicit sets, reps, rest and heart-rate gates. The rationale ties the session to sit-bone pressure, back protection and the spring brevet and PBP goals, but it is somewhat thin on the week's target load and the fat-loss role. The 40 kg starting load for the pull is a reasonable stated assumption, though the response does not explicitly flag it as one. Season revision: The season is genuinely re-planned around Atlas Mountain Race on 28 February 2027, with contiguous blocks that tile to 2027-08-22, block 1 kept at 2026-10-21, and the current week and today coherent with the supplied activities and weather. Weaknesses include a short and weakly differentiated taper before Atlas, a season end date and PBP timing that are assumed rather than supplied, some meta-style phrasing about the prior load in the block rationale, and a coachQuestion about the April brevet date that a conservative assumption could have resolved, so the question-only penalty does not apply but the question is avoidable.

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Indoor gym session, 45 minutes, moderate. This is the second strength day of the week: a
flat-back hip hinge and two controlled single-leg sets, not a hard leg day. Rest 90–120 seconds between
every set and do not start the next set until your heart rate is under 110 bpm. Warm-up, 8 minutes: 4
minutes easy bike or SkiErg, then 8 glute bridges, 6 slow dowel or empty-bar hip hinges with a flat back,
and 6 shallow bodyweight split squats per side. Main work: (1) Knee-height rack pull or trap-bar pull, 3
sets of 8. You have not loaded this pattern yet, so start at 40 kg, or the empty trap bar if 40 kg already
rounds your lower back. Bar starts about knee height; stand tall without leaning back; stop the set if the
lower back takes over. (2) Bodyweight split squat, 2 sets of 8 per leg only — no third set. Torso tall,
front foot flat, hand on a rack for balance. Stay at bodyweight because Tuesday's goblet squats still left
some quad burn. (3) Seated cable row or chest-supported row, 3 sets of 10, starting at 35–40 kg and only
going up if you can pause 1 second at the chest without shrugging. This replaces a bent-over row so the
lower back stays quiet. (4) Dead bug, 3 sets of 6 per side, slow, lower back pressed into the floor. After
you save the session, do your usual unrecorded hip and spine circuit, about 90 seconds each: couch stretch
or low lunge with hips forward, standing forward fold with soft knees, 90/90 hip rotations, deep squat hold
with heels down, supine figure-4, and cat-cow. Keep dinner protein-rich and high in vegetables so the
session does not turn into a large evening meal.",
    "optional": false,
    "optionalRationale": "This session builds the flat-back hip hinge and single-leg stability that take
load off your sit bones and lower back on long climbs, which is the posture base for the April 200 km brevet
and Paris-Brest-Paris. Skipping it leaves that hinge untrained for another week while your back is ready for
this conservative load and not for heavier squats or good mornings."

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027, comfortably complete a 200 km brevet in
April 2027, and arrive ready for Paris-Brest-Paris in August 2027 by training in sustainable cycles of about
four months.",
    "rationale": "Atlas Mountain Race is your first major test and it sits about four months from now, which
is as long as you have previously been able to keep disciplined progress. The season is therefore separate
cycles with real recovery between them, not one continuous build through August. You first lock in easy
aerobic durability, cadence above 85 rpm, and light strength inside your two-hour weekday limit, with the
long work on weekends. December and January grow the long ride, fueling, and climbing cadence, using skiing
and easy running as extra aerobic time rather than extra fatigue. February is specific and then shorter so
you reach 28 February fresh. Two easy weeks follow the race. Brevet-specific riding then starts on 15 March
so you can start a 200 km from early April; the exact April date is not stated, so that block keeps you
ready across April rather than peaking for one unknown day. After that you start a new cycle for Paris-
Brest-Paris, again with an easier week every fourth week, because a second hard build stacked on the first
would repeat the pattern that has stopped your progress before. The season runs through 22 August 2027 on
the assumption that Paris-Brest-Paris falls in mid-to-late August and is finished by then. Your stated FTP
of 225 W is the baseline.",

  },
  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "You need time in the saddle and a habit you can keep, not a threshold chase, because Atlas
Mountain Race on 28 February 2027 is won by durable easy pacing, climbing cadence, and fueling, and you have
only held disciplined progress for about four months. Recent rides show you can stay easy when you choose
to: indoor power near 100-135 W with heart rate in the teens and a hike at 114 bpm. Cadence has still
dropped to 66-78 rpm when you are not watching it, and the three-hour effort at 187 bpm average heart rate
the day before this block shows that hard racing does not build the engine you need. Weekdays stay inside
your two-hour after-work limit. Weekends carry the longer ride. Aerobic heart rate stays under 140 bpm,
cadence is above 85 rpm from the first minute on the flat, and missed minutes are not made up. Strength is
one low-load full-body session a week with loads logged, because extra leg work such as pole vaulting has
already shown up as heavy quads. A short tempo block waits until the fifth week, and only if the easy rides
have been consistent. Your stated FTP of 225 W stays the baseline; recent power is far below threshold and
does not support a higher number. November rain and sunset before the end of the working day mean the longer
rides go on the trainer unless a weekend day is actually dry.",

    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If you would rather rest, take the day off. Saturday's hike already covered this week's long easy
aerobic work."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before you start the cadence-focused trainer rides that build
Atlas Mountain Race durability. Thirty easy minutes maintains a little running-specific durability for the
winter base and costs almost nothing the day after a 2 hour 5 minute hike. It stays indoors because rain and
gusts up to 7 m/s are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "Skipping this run costs only a small slice of running-specific durability.
Saturday's hike already trained the long easy aerobic engine that carries you through the early hours of
Atlas Mountain Race, and one missed 30-minute run does not change your ability to start next week's rides
fresh. Rest is an acceptable choice if your legs are heavy.",

Google: Gemini 3.8 Flash

10.4/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	B	112.3 s	$0.0787	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00691	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns only the requested today object with status planned, which is correct because no activity is recorded for 2026-10-30, and it keeps the planned 45-minute moderate indoor gym session with the elevated pull and split squat progression. The design is safe and specific, with sets, reps, rest tied to the heart-rate recovery cue, and a sensible seated row and Pallof press addition, though the cable row load of 35 to 40 kg is asserted without basis and there is no explicit load progression or RPE guidance. The rationale is grounded in the athlete's lower-back and hip-hinge problems and the brevet goal, and the description repeats the daily mobility circuit cleanly. Season revision: The response names Atlas throughout, keeps block 1 starting on 2026-10-21, and re-tiles the remaining season contiguously to 2027-08-29 with a sensible four-month wave, March reset and Atlas taper. Block 1 changes are modest, mainly the rationale and the week 2 target load, and the Atlas-specific work is largely deferred to later blocks. The season rationale adds world-knowledge detail such as Morocco and the 1,200 km PBP distance, and the Thursday session is retitled as Easy Indoor Spin even though the athlete logged nothing that day. Today's session is detailed and kept coherent with the week, and tomorrow, next week and next block are correctly null.

    "bikeWorkout": null,
    "description": "Warm-up (5 min): Light dynamic mobility including 10 cat-cows, 10 bodyweight glute
bridges, and 10 unloaded hip hinges focusing on soft knees and flat back.\n\nMain Strength Circuit (32
```

```
min):\n1. Elevated Knee-Height Rack Pulls (or High-Handle Trap Bar Pulls): 1 warm-up set of 8 reps with an empty bar, then 3 working sets of 8 reps with light resistance (30–40 kg total). Set the bar pins directly at kneecap height. Focus on bracing your core, pulling your shoulders back, and hinging purely from your hips with a neutral spine—do not pull from the floor. Rest a full 90–120 seconds between sets until your heart rate drops below 110 bpm.\n2. Bodyweight Split Squats: 2 sets of 8 reps per leg. Keep your torso upright and lower under control. Rest 90 seconds between sets. Keep this strictly bodyweight to preserve your quads for the weekend.\n3. Seated Cable Row (neutral grip): 3 sets of 10 reps at moderate weight (approx. 35–40 kg). Focus on mid-back retraction without leaning backward.\n4. Half-Kneeling Pallof Press: 3 sets of 10 reps per side. Brace your glutes and core to resist rotational pull.\n5. Side Plank: 3 sets of 20–30 seconds per side. Rest 45 seconds between sets.\n\nDaily Hip and Spine Mobility Circuit (8 min, unrecorded):\nSpend 90 seconds on each movement: (1) Couch stretch or low lunge with hips gently pushed forward, (2) Standing forward fold with soft knees, gradually lengthening hamstrings toward the floor, (3) 90/90 hip rotations on the floor, (4) Deep squat hold with heels grounded (holding a sturdy gym upright for balance if needed), (5) Supine figure-4 glute stretch, and (6) Slow cat-cow focusing on segmented spinal movement.",
    "optional": false,
    "optionalRationale": "This session builds foundational posterior-chain durability, pelvic stability, and safe hip-hinge mechanics without loading your lumbar spine from the floor. If you skip this workout, you miss the progressive neuromuscular stimulus required to strengthen your glutes and lower back, leaving you vulnerable to the climbing back pain and pelvic-tilt sit-bone friction that derail multi-hour randonneur brevets."

  "season": {
    "goal": "Successfully complete the Atlas Mountain Race on February 28, 2027, complete the randonneur brevet qualifying series starting with a 200 km event in April, and peak for Paris-Brest-Paris in August 2027, structuring the progression with planned recovery phases to prevent burnout given a four-month discipline ceiling.",
    "rationale": "Your season targets two major ultracycling peaks alongside a spring qualifying campaign: the Atlas Mountain Race on 28 February 2027 and Paris-Brest-Paris in August 2027, bridged by the brevet series. Because your training history shows progress is sustainable for at most four months before fatigue or loss of discipline sets in, the season is divided into two distinct training waves separated by an intentional recovery and reset block. Wave one spans November through February, dedicating four disciplined months to building aerobic base, winter durability via skiing and cycling, and off-road ultra endurance for Morocco. March provides a vital mental and physical decompression block with reduced structure and active recovery, preventing burnout while transitioning to the road. Wave two builds through the spring brevet series (200 km to 600 km) and peaks specifically for the 1,200 km demands of Paris-Brest-Paris in August.",

typesafe/jev-router

10.4/12.5

TypeSafe: Jev Router

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	C	142.7 s	$0.1077	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00723	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns only the required today object with the correct date, planned status, 45 minute moderate gym workout, outdoor false, canBeOutdoor false, FTP 220 and bikeWorkout null, all consistent with the plan. The exercise selection is sensible for the hinge-protection goal, with explicit sets, reps, RPE, rest and a heart-rate ceiling of 110 bpm that matches the coach feedback. The weakness is that no starting loads or load progression are given for the rack pulls or cable row, and the rationale is somewhat generic about lean mass and back resilience. Season revision: The season is refreshed in place with the current block starting on 2026-10-21, the later blocks tile cleanly through 2027-08-31, tomorrow, nextWeek and nextBlock stay null, and the week has seven sessions with a matching today entry. Atlas is named in the season goal, several block focuses, the week rationale and today's rationale, and the 45-minute indoor ride uses correct 225 W percentages that sum to the stated duration. Weaknesses: the current block itself is named Cycling Re-entry and never mentions Atlas, the season rationale invents a multiday Atlas framing the athlete did not state, and the week's pre-Atlas load is only lightly tied to the event.

TODAY PLAN

Judgment: The candidate returns only the required today object with the correct date, planned status, 45 minute moderate gym workout, outdoor false, canBeOutdoor false, FTP 220 and bikeWorkout null, all consistent with the plan. The exercise selection is sensible for the hinge-protection goal, with explicit sets, reps, RPE, rest and a heart-rate ceiling of 110 bpm that matches the coach feedback. The weakness is that no starting loads or load progression are given for the rack pulls or cable row, and the rationale is somewhat generic about lean mass and back resilience.

    "title": "Gym Strength B: Hip Hinge, Split Squat & Core",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Warm up 8 minutes easy bike or brisk walk plus hip/spine mobility. Then do: A) trap-bar
or knee-height rack pull 3x6-8 at RPE 6-7, leaving 2-3 reps in reserve, with a flat back and 90-120 seconds
rest; B) bodyweight split squat 2x8 per leg, 2 seconds down, 60-90 seconds rest, stopping if quad burn
becomes limiting; C) seated cable row 3x10-12 at RPE 7, 90 seconds rest; D) Pallof press 3x10 per side, 60
```

```
seconds rest; E) dead bug 3x8 per side. Let your heart rate fall below 110 bpm before each pull and split-squat set. Finish with 5 minutes of hip/spine mobility: couch stretch, 90/90 rotations, cat-cow, and forward fold.",
    "optional": false,
    "optionalRationale": "This session is a key part of the Autumn Re-Entry block's safe hip-hinge and posterior-chain progression, building the back and hip resilience you need for pain-free long brevets while helping preserve lean mass during fat loss. It also supports Week 1's 5.0-5.5 hour target load. If you skip it, you lose the weekly dose of controlled hinge and single-leg strength that protects your lower back and reduces the sit-bone and climbing-posture problems that would otherwise limit your PBP build."
  }
}

SEASON REVISION

10.0/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
122.9 s	**$0.1032**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.6/2

Judgment: The season is refreshed in place with the current block starting on 2026-10-21, the later blocks tile cleanly through 2027-08-31, tomorrow, nextWeek and nextBlock stay null, and the week has seven sessions with a matching today entry. Atlas is named in the season goal, several block focuses, the week rationale and today's rationale, and the 45-minute indoor ride uses correct 225 W percentages that sum to the stated duration. Weaknesses: the current block itself is named Cycling Re-entry and never mentions Atlas, the season rationale invents a multiday Atlas framing the athlete did not state, and the week's pre-Atlas load is only lightly tied to the event.

{
  "season": {
    "goal": "Build toward completing the Atlas Mountain Race starting 28 February 2027, comfortably completing your spring randonneur brevet series, and finishing Paris-Brest-Paris in August 2027 while sustaining a training routine beyond four months.",
    "rationale": "Your goals require durable cycling fitness, climbing strength, reliable fueling, equipment familiarity, and sustainable training habits more than an early peak in FTP. Your recent easy activities felt good, but limited recent cycling and the substantial October race load favor rebuilding cycling consistency before adding demanding intervals. Use short, varied training cycles with regular recovery, a deliberately achievable minimum week, and no make-up sessions. Most riding should remain conversational, with progressively longer weekend rides and limited purposeful intensity. Skiing can support winter aerobic fitness without replacing all cycling-specific work. Your Atlas date is treated as the start of a multiday event; its finishing date and your exact brevet and PBP dates are unconfirmed, so event and recovery windows remain provisional. The season ends on 31 August as a planning horizon, not an assumed PBP date. Atlas readiness will depend on tolerating progressive long rides, technical practice, and equipment rehearsals; this plan cannot guarantee readiness from your current training.",

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.3/2 · Design 2.2/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.6/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate values, 45 minutes, indoor gym flags, null bikeWorkout and the 220 W FTP. The session is a sensible gym hinge-and-core day with specific sets, reps, rest, RIR and stop conditions, and it honestly flags the missing pull-load number as an assumption. The rationale ties the session to the hinge progression, back and sit-bone goals and fat-loss muscle retention, though it could say more about the weekly load target. Minor weaknesses are the 3x10 lat pulldown at 40 kg sitting below the athlete's recent 50 kg work without much justification, and the extra loaded glute bridge adding volume to a session the plan keeps moderate. Season revision: The block starts on 2026-10-21, the Atlas Mountain Race is named in the season, block and rationale, and the blocks tile contiguously with a sane taper before 28 February. The season ends on 2027-04-04, however, so Paris-Brest-Paris in August 2027 and the intervening brevet series are dropped from the plan. Today was switched from the supplied run to a detailed indoor trainer ride whose interval durations sum correctly to 60 minutes, and the week keeps seven sessions with the completed days reported accurately. Some season rationale describes general Atlas race characteristics such as hike-a-bike that the athlete did not state.

```
    "bikeWorkout": null,
    "description": "Gym session, about 45 min. Rest 90–120 s between sets so your HR drops below 110 bpm before each set. Expect a session average around 100–110 bpm and peaks under about 140 bpm. Stop every set with 3+ reps in reserve. I have no pull-load number from you, so the load for the rack pull is a conservative assumption.\n\n1) Warm-up (6 min): cat-cow x10, hip hinge with a dowel or broomstick x10 (flat back, soft knees), bodyweight glute bridge x12, 90/90 hip rotations x5 per side.\n2) Elevated rack or trap-bar pull from knee height: 3 x 8. Start with the bar plus a light plate load (roughly 30–40 kg total). Brace your core, keep your back flat, and push the floor away. Stop the set if your lower back takes over. Do not pull from the floor yet.\n3) Bodyweight split squat: 2 x 8 per side, holding a support for balance. Use a short, controlled range and stop well before quad burn forces you to rush.\n4) Lat pulldown: 3 x 10 at 40 kg (you already did 50 kg x 10, so keep this smooth with a 2-second lowering phase).\n5) Loaded glute bridge: 3 x 12 with a light load (about 12 kg, or bodyweight if that feels easier). Squeeze for 1 s at the top.\n6) Pallof press: 3 x 10 per side.\n7) Plank: 3 x 30 s, plus side plank 2 x 20 s per side if time allows.\n\nFinish by stopping the recording and then doing your 8-minute hip and spine mobility circuit (unrecorded). It is raining, so being indoors costs you nothing. Afterwards, have a protein-rich snack and plan a high-volume vegetable dinner to keep tonight's hunger manageable.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge pattern and core stability that will later let you load heavier posterior-chain work. That strength is what stops back ache on long climbs and reduces the sit-bone pressure of an upright riding position on PBP-length rides. It is also the second lifting dose of the week. Skipping it delays the hinge progression and the gradual strength gain that supports fat loss, because lifting helps preserve muscle while you eat in a deficit. It also fits the block's strength-and-mobility focus and keeps the week's load on target. Tomorrow's hike is capped at 2 hours, so today's work is controlled and moderate rather than taxing."
  }

RETURNED JSON

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 strong and healthy, then recover and complete a 200 km randonneur brevet in April 2027 (assumed early April) as the first step of the brevet series that leads to Paris-Brest-Paris in August 2027.",
    "rationale": "The Atlas Mountain Race on 28 February is the first and hardest target, so the season builds toward it. It is a multi-day, self-supported ultra event, probably with rough terrain and some hike-a-bike. That calls for aerobic durability, fuelling, steady climbing at low intensity, strong walking legs and enough strength to hold position on a loaded bike. You can only sustain disciplined training for about 4 months, and 21 October to 28 February is about 4.3 months. The plan therefore starts modestly, builds volume gradually, includes a deload every fourth week, and puts the peak in late January and early February rather than early on. After the race, a recovery block protects you from the long-effort fatigue and leads into the April 200 km brevet, which is comfortably within reach on the fitness you will have. Paris-Brest-Paris preparation is a separate disciplined cycle that should start after the April brevet, so this season ends with the first brevet. The 225 W FTP is the baseline. Recent evidence shows large fatigue from unplanned hard efforts (the 3-hour race at 187 bpm average) and cadence below 85 rpm on easy rides, so early blocks keep aerobic work under 140 bpm and build cadence efficiency before adding intensity. Hiking, skiing and easy running add aerobic volume at low joint and muscular cost through the winter.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence above 85 rpm and low-load strength without
stacking fatigue, as the base for the Atlas Mountain Race.",
    "rationale": "The Atlas Mountain Race on 28 February rewards a deep, durable aerobic base, so this first
block raises steady cycling volume and cadence efficiency before intensity enters. The block is also the
first part of an approximately 4-month disciplined stretch you can sustain, so it progresses gradually and
includes a deload in Week 4. Week 1 carried about 587 TSS because of the 3-hour race at 187 bpm average HR
and strength work with pole vaulting, which is a high load for a recovery week. Week 2 delivered mostly
strength, rowing, a short run and long hikes at controlled heart rates. Almost no cycling was done, and
cadence on the trainer has stayed below 85 rpm, so the closing ride of Week 2 and the early Week 3 rides
focus on cadence efficiency. Every aerobic session stays under 140 bpm, strength is logged separately and
either completed or deliberately shortened, and missed minutes are not made up. Hiking stays in the plan
because walking durability and steady aerobic work suit the race. A single controlled threshold-adjacent
stimulus enters in Week 3 only if cycling execution is clean, followed by the Week 4 deload. The 225 W FTP
is retained because no fresh test or sustained power data justifies a change.",

HARD GATES	JUDGE COST	JUDGED
pass	$0.00692	anthropic/claude-haiku-5.5

Mentions Atlas **pass**

Block 1 changed or Atlas question asked **pass**

Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns a clean today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and 220 W FTP, matching the week plan's Friday Gym Strength B. The exercise prescription is specific, with sets, reps, RPE guidance, rest periods, a fallback for back discomfort and a stop condition, and it respects the two-set split squat cap. Weaknesses are that the rationale is somewhat generic, the goblet squat progression from the week plan is not referenced, the athlete's requested heart-rate targets for non-cycling work are replaced by a vague instruction not to chase heart rate, and the 45-minute timing is tight for the listed lifts. Season revision: The season is cleanly re-tiled from 2026-10-21 to 2027-08-31 with contiguous blocks, block 1 starts on 2026-10-21, tomorrow, nextWeek and nextBlock stay null, and the Atlas race is named in the season goal, block 3 and today's rationale. The weakness is that block 1 itself is still the old brevet-era aerobic base: weeks 3 to 7 are not re-tailored for Atlas-specific demands such as hike-a-bike, multi-day fatigue or off-road volume, and the coach question asks about off-road access the athlete never raised instead of working that into the plan. Some Morocco-specific details such as night riding and multi-day bike carrying are inferred rather than supplied.

```

```
    "description": "Allow 5 minutes to warm up, 32 minutes for lifting and 8 minutes for mobility. Warm up with easy stationary cycling, then rehearse 8 unloaded hip hinges while keeping your spine comfortably neutral. Complete: elevated knee-height rack or trap-bar pull 2 × 8; supported bodyweight split squat 2 × 8 per side; machine chest press 2 × 10; seated cable row 2 × 10; Pallof press 2 × 10 per side. Your current hinge load is unknown, so use the lightest practical setup and keep every exercise around RPE 5–6/10, leaving at least four good repetitions in reserve. Rest 90–120 seconds between lower-body sets and 60–90 seconds between upper-body and core sets; take longer if your breathing or technique has not recovered. Do not chase a heart-rate target during lifting. If the elevated pull causes back discomfort or you cannot maintain control, use 2 × 12 comfortable glute bridges instead. Stop any exercise that produces sharp or increasing pain. Finish with 8 minutes of gentle low-lunge stretching, supported soft-knee forward folding, 90/90 hip rotations, supported squat holding, supine figure-4 stretching and cat-cow. Avoid forcing range or rounding into a loaded stretch.",
    "rationale": "Your manageable quad burn on Tuesday and comfortable Wednesday run/row support a second conservative gym exposure after Thursday's scheduled recovery. Low-volume leg work and a carefully controlled hinge develop strength without creating unnecessary soreness before tomorrow's hike. Supported pulling, pressing and anti-rotation work address your full-body strength goal and the trunk endurance you need for long climbs.",
    "optional": false,
    "optionalRationale": "This session builds posterior-chain strength and trunk control toward tolerating long brevet and Paris-Brest-Paris rides with less back fatigue. It provides the Autumn Re-Entry block's second weekly strength stimulus within your roughly five-hour training week, while resistance training supports muscle retention during gradual fat loss. Skipping it would remove that second strength exposure and slow your progression toward more resilient hips and back."

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027 with the durability to ride and carry a bike for multiple days, then comfortably finish a 200 km brevet in April as the first step of the randonneur series, and build to Paris-Brest-Paris in August 2027 with steady pacing, fuelling discipline and sustained aerobic endurance.",
    "rationale": "The season runs from 21 October 2026 to the end of August 2027 because that span covers your three goals in order: the Atlas Mountain Race on 28 February, the 200 km brevet in April with the rest of the randonneur series behind it, and Paris-Brest-Paris in August. The near-term priority is Morocco: a multi-day off-road race rewards long, durable, well-fuelled riding and the ability to keep pedalling and pushing a bike for very long days much more than it rewards a high threshold, so the first half of the season builds aerobic volume, cadence efficiency, general strength and fuelling habits. The brevets then convert that durability into sustained road distance, and the PBP block extends it to 400-600 km with sleep and pacing management. Because you can hold disciplined structure for roughly four months at a time, the season is cut into short single-purpose blocks of two to eight weeks with planned resets — most importantly a two-week reset straight after Morocco — so each block starts with one clear job and ends before your motivation or your adaptation runs out. Volume grows conservatively from a 4-6 hour aerobic base toward long weekend rides, threshold work enters in small doses only after a week of stable aerobic execution, and FTP starts from the 225 W you stated on 1 November and rises only as completed training justifies.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This seven-week block builds the aerobic durability, cadence efficiency and general
strength that everything later rests on: the Atlas Mountain Race at the end of February, the April brevet
series and Paris-Brest-Paris in August. Your recent record — a three-hour race at 187 bpm average, a
strength session that became a squat-and-pole-vaulting load with heart rate spiking to 150 bpm, and a well-
controlled 2 h 05 min hike at 114 bpm — shows good aerobic discipline at low intensity but a tendency to add
unplanned high load on top of it. So almost all riding stays below 140 bpm with cadence above 85 rpm from
the first minute, strength is a separate logged low-load session that you either complete fully or
deliberately cut, and missed minutes are dropped rather than recovered. Because you can hold structure for
roughly four months at a time, this is the first of a chain of short single-purpose blocks with planned
resets, which keeps each one fresh enough to finish. Week 3 introduces the first controlled sustained-power
work only after Week 2's steady aerobic execution, Week 4 deloads, and volume then grows to 6.5-7.5 hours in
Weeks 6-7. FTP stays at the 225 W you stated on 1 November until sustained power data says otherwise.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week served its purpose: strength A on Tuesday, a Wednesday double of 15 minutes of
rowing plus a 32-minute easy run, strength B on Friday, and a 2 h 05 min hike on Saturday at 114 bpm average
that stood in for the planned 90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling,
and Thursday's trainer ride was the only session missed, so fatigue is low and nothing needs to be made up.
Sunday closes the week with 30 easy minutes instead of a replacement ride, so you arrive at Week 3's first
controlled sustained-power work fresh. The one thing still untrained is cycling cadence: neither the hike
nor the strength days gave you cadence-above-85-rpm work, and that habit carries into Week 3, because
repeatable efficiency at low intensity is what carries you through the long days in Morocco and the 200 km
brevet in April.",

      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled sustained-power work. Thirty easy
minutes maintains the weight-bearing aerobic fitness and running economy that support the long hike-a-bike
and bike-carrying sections of the Atlas Mountain Race in February, and it costs almost nothing in fatigue
the day after a 2 h 05 min hike. It stays indoors because rain and 7 m/s gusts are forecast all day, and the
115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "This run keeps your weight-bearing aerobic fitness and running economy alive,
which is exactly what carries you through the pushing and carrying sections in Morocco and keeps running
usable as winter cross-training toward the April brevet. It is also the week's only running stimulus and
adds a small amount toward the week's roughly 240 TSS. The cost of skipping it is low in absolute terms
because the week's cycling and strength work is already banked, but you would lose the only running-specific
work of the week, which takes longer to rebuild later.",

meta/muse-spark-1.1

10.3/12.5

Meta: Muse Spark 1.1

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	A+	B	24.3 s	$0.0686	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00660	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 1.9/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean and the today object matches the planned Friday gym session on 2026-10-30 with correct type, intensity, duration, indoor flags, FTP and TSS. The exercise list is well sequenced for this athlete: glute bridges, elevated hinge, a capped split squat, lat pulldown with the logged loads, Pallof and side plank, with rest periods and a heart-rate gate before sets. The description adds useful stop conditions for rounding of the low back and sharp quad burn, though it does not state an RPE target and the 40-50 kg rack pull starting load is an unflagged assumption. The rationale ties the session to hip-hinge durability and fat-loss goals and states the cost of skipping, but it is somewhat generic about the weekly load target. Season revision: The response names Atlas throughout the season, keeps block 1 starting on 2026-10-21, and tiles the seven season blocks correctly through 2027-08-22 with the Atlas race placed inside a dedicated block. However, block 1 is barely changed from the supplied version, with only the FTP values and a rewritten rationale differing, so the Atlas adaptation does not really reach the current block. The later blocks run brevet and PBP-style builds for roughly 16 weeks without a reset, which conflicts with the athlete's stated four-month ceiling, and terms such as night riding and hike-a-bike are introduced without athlete support. The current week and today's session are coherent and correctly leave tomorrow and the next week and block null, but today's rationale was rewritten beyond what the supplied planned workout allowed.

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The response is clean JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, and 30 TSS, matching the planned Friday gym session. The exercise list is well chosen for the hinge and back-protection goals, with explicit sets, reps, rest, form cues and stop conditions, and it respects the two-set split squat limit from the coach feedback. Weaknesses: the chest-supported row load is only loosely anchored to last week's pulldowns, the 3x12 bridge progression is conditional and vague, and the rationale does not mention the week's goblet squat volume, which belongs to the other gym day. Season revision: The answer names Atlas throughout the season goal, season rationale, and the new AMR blocks, keeps block 1 starting on 2026-10-21, returns tomorrow, nextWeek and nextBlock as null, and tiles the season blocks without gaps. Its weaknesses are that block 1 is largely the old block with only the rationale and some target-load wording changed, the season ends on 2027-04-04 so Paris-Brest-Paris in August 2027 appears only as a sentence in the goal rather than as planned work, and the Wednesday session was merged and retitled even though the rest of the week was meant to stay as supplied. Today's session is coherent with the week and grounded in the athlete's HR and indoor constraints, though flipping optional to true is a judgment call the rationale only partly supports.

TODAY PLAN

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.5/3 · Rationale 1.7/2 · Grounding 1.8/2 · Detail 1.7/2

Judgment: The response is clean JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, and 30 TSS, matching the planned Friday gym session. The exercise list is well chosen for the hinge and back-protection goals, with explicit sets, reps, rest, form cues and stop conditions, and it respects the two-set split squat limit from the coach feedback. Weaknesses: the chest-supported row load is only loosely anchored to last week's pulldowns, the 3x12 bridge progression is conditional and vague, and the rationale does not mention the week's goblet squat volume, which belongs to the other gym day.

```
    "description": "Gym Strength B at your well-equipped gym. Keep every working set controlled and take a full 90–120 seconds of rest so your heart rate drops below 110 bpm before you start the next set. Do not add load if your lower back or form wavers.\n\nWarm-up (8 min): 5 minutes easy walk or gym bike, then 8 cat-cows, 8 bodyweight glute bridges, and 6 slow broomstick or empty-bar hip hinges to knee height with a flat back.\n\nMain:\n1) Elevated rack or trap-bar pulls with the bar at knee height: 2 light rehearsal sets of 5, then 3 working sets of 8. Use a conservative load that lets you keep a perfectly flat back and the bar close to your body (empty bar or a light trap-bar load if unsure). Hinge from the hips; do not round or yank. If any set bothers your back, drop the load immediately or stop that exercise.\n2) Bodyweight split squats: 2 sets of 8 per leg only, no extra load. Front knee tracks over mid-foot, torso tall, 2-second lower. Stop at 2 sets even if they feel easy — your quads are still adapting after Tuesday's goblet squats.\n3) Chest-supported or seated cable row: 3x10–12 at a moderate effort similar to last week's 40–50 kg lat pulldowns. Squeeze the shoulder blades; no torso swing.\n4) Glute bridge or hip thrust: 3x12. Add a light dumbbell or plate on the hips only if last week's bodyweight 3x12 still feels easy.\n5) Dead bug: 3x8 per side, low back pressed to the floor, slow.\n6) Side plank: 3x20–25 s per side.\n\nFinish with your daily 8-minute hip/spine mobility circuit (unrecorded): about 90 seconds each of couch stretch or low lunge with hips pushed forward, standing forward fold with soft knees gradually straightening toward the floor, 90/90 hip rotations, deep squat hold with heels down, supine figure-4, and cat-cow.",
    "optional": false,
    "optionalRationale": "This is the week's second gym dose and the only session that rebuilds a safe hip hinge with elevated rack/trap-bar pulls plus two bodyweight split-squat sets. That hinge and posterior-chain control is what lets you sit more aero without sit-bone blisters and climb without a tired back — the core flexibility and strength you need for long brevets and PBP. Skip it and you lose half of this week's strength stimulus and delay the hinge progression Week 2 builds on."
  }
}

Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Judgment: The answer names Atlas throughout the season goal, season rationale, and the new AMR blocks, keeps block 1 starting on 2026-10-21, returns tomorrow, nextWeek and nextBlock as null, and tiles the season blocks without gaps. Its weaknesses are that block 1 is largely the old block with only the rationale and some target-load wording changed, the season ends on 2027-04-04 so Paris-Brest-Paris in August 2027 appears only as a sentence in the goal rather than as planned work, and the Wednesday session was merged and retitled even though the rest of the week was meant to stay as supplied. Today's session is coherent with the week and grounded in the athlete's HR and indoor constraints, though flipping optional to true is a judgment call the rationale only partly supports.

RETURNED JSON

{
  "season": {
    "goal": "Arrive at the Atlas Mountain Race on 28 February 2027 with durable aerobic endurance, efficient climbing cadence, and enough strength for long mountain days, then recover in time to finish a 200 km brevet comfortably in April 2027, with Paris-Brest-Paris in August 2027 as the next horizon.",
    "rationale": "You have an ultra-distance A-event in four months, a 200 km brevet six weeks after that, and a history of losing disciplined progress after about four months. This season therefore peaks at the Atlas Mountain Race rather than stretching one continuous build all the way to Paris-Brest-Paris. The opening block rebuilds aerobic control, cadence above 85 rpm, and low-load strength. Winter then keeps cycling specific while skiing and easy running add durability without stacking fatigue. January and February convert that base into long, well-fuelled mountain endurance, then a short taper into 28 February. March is recovery and easy brevet practice, not another peak, so you can finish the 200 km without repeating the fade. Frequent deload weeks and mixed modes are how you stay inside that four-month window.",

10.2/12.5

OpenAI: GPT-6 Luna Pro

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	A	A+	87.4 s	$0.0118	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00670	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid, uses the requested today object with the correct date, planned status, moderate workout type, 45 minutes, indoor gym flags, 220 W FTP and TSS 30, and it correctly avoids marking an activity as completed. The session is a sensible second strength day with elevated pulls, lat pulldowns, split squats, bridges and Pallof presses, and it includes a rest interval, heart-rate gate and back-stop instruction. Weaknesses are that the loads are only described as light with no RPE or reps-in-reserve guidance, the description does not reference the athlete's earlier quad-burn feedback when choosing volume, and the rationale is solid but somewhat generic about the season goal. Season revision: The response names Atlas throughout the season, the block focus and the rationale, keeps block 1 starting on 2026-10-21, and returns the eight required keys with seven week sessions and a matching today session. The season blocks tile contiguously to 2027-08-31 and preserve the April brevet and Paris-Brest-Paris, with the Atlas build, taper and post-race recovery placed sensibly. Weaknesses: block 1 weeks 2 to 7 are largely unchanged, so the Atlas adaptation in the current block is mostly a relabel of focus and rationale rather than a real redesign, and the four-week Atlas endurance build is compressed. Today's rationale is also reworded rather than kept, and the week rationale partly narrates the prior week instead of stating the plan as it stands.

moonshotai/kimi-k2.7-code

10.2/12.5

MoonshotAI: Kimi K2.7 Code

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	B	148.1 s	$0.0479	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00687	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, the today object matches the 2026-10-30 Friday gym session with status planned, 45 minutes, moderate intensity, indoor, FTP 220 W and TSS 30, and no bikeWorkout is correctly null. The exercise prescription is specific with sets, reps, rest, tempo and a heart-rate recovery gate that respects the athlete's back and hip limits. However, it drops the goblet squat progression that the week plan asks to hold at three sets, and the volume of roughly twelve exercise blocks with 90 to 120 second rests looks tight for 45 minutes. The rationale names the posterior-chain and single-leg purpose and what is lost by skipping, though it links less explicitly to the fat-loss goal. Season revision: The season tiles cleanly from 2026-10-21 to 2027-08-31 with Atlas named in the block names and goal, a post-Atlas reset, the April 200 km brevet, and the four-month reset logic, and block 1 keeps its 2026-10-21 start with tomorrow, nextWeek and nextBlock correctly null. Weaknesses: block 1 itself changes little for Atlas beyond wording and a threshold stimulus in week 3, the already-completed sessions were edited (Wednesday merged into a 47-minute double, the hike's duration and TSS changed), and the week 2 target load (260-285 TSS) does not match the week's own session TSS sum of about 233. The August 31 season end is an invented date, though it is disclosed as a conservative assumption.

TODAY PLAN

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "This is the second half of your introductory gym split and the key lower-back-safe
strength stimulus for the week. After a 5-minute general warm-up (light row or walk), do 2 sets of 10
bodyweight box squats to a bench to groove hip motion. Main work: elevated knee-height rack pulls or trap-
bar deadlifts, 3 sets of 8 reps with a light load you can move with a perfectly flat back and controlled
tempo (2 seconds up, 2 seconds down), resting 90–120 seconds so your heart rate drops below 110 bpm before
each set. Then bodyweight Bulgarian split squats, 2 sets of 8 reps per side, focusing on an upright torso
and controlled descent; stop if quad burn becomes sharp. Follow with 3 sets of 10 seated cable rows at a
moderate load, 3 sets of 10 dumbbell overhead presses, and finish with core: 3 sets of 10 Pallof presses per
side and 3 sets of 30-second front planks. Close with your 8-minute hip and spine mobility circuit. The goal
is posterior-chain and single-leg resilience to support an eventual lower, more comfortable cycling
position, not to lift heavy today.",
    "optional": false,
    "optionalRationale": "Skipping this session removes the only dedicated hip-hinge and single-leg strength
stimulus this week. You would delay the lower-back and hip-flexor adaptations that let you ride longer with
less sit-bone pressure, and you would enter next week with less stability for the run/walk and row
sessions."
  }

{
  "season": {
    "goal": "Build long-distance cycling durability for the Atlas Mountain Race on 2027-02-28, arrive able
to comfortably complete the April 200 km brevet and the spring randonneur series, and keep a sustainable
base toward Paris-Brest-Paris in August 2027 without overrunning the athlete's realistic four-month
disciplined-training window.",
    "rationale": "The season now prioritises ultra-endurance cycling first, with strength as support and
skiing or running as low-cost aerobic cross-training. Because disciplined progress has historically lasted
no more than about four months, the year is split into clear commitments with deliberate resets after the
Atlas Mountain Race and again after the April brevet period rather than one uninterrupted build. The current
block stays aerobic-first because recent training shows good low-intensity control but also sporadic high-
load spikes from a three-hour race and extra strength work; efficient cadence, repeatable sub-140 bpm
riding, fueling practice, and durable strength are the qualities that later support long off-road racing,
200 km brevets, and PBP. The exact August date for Paris-Brest-Paris is not stated, so the season horizon is
set conservatively to 2027-08-31.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block is the right start for an Atlas-to-brevet-to-PBP season because the limiting
factor is not top-end power but repeatable aerobic output, pedalling efficiency, fueling tolerance, and the
ability to keep training after the first hard months. Week 1 produced much more load than planned through
the three-hour race, extra activity, strength and pole-vaulting work, a controlled easy ride, and the long
hike, so the block keeps intensity conservative rather than chasing missed minutes. Week 2 showed good
heart-rate discipline but not enough cycling-specific cadence work, so cadence above 85 rpm from the first
minute remains a core skill before threshold volume grows. A single controlled threshold stimulus is
appropriate only after stable aerobic execution, followed by the planned deload; that shape protects
consistency toward 2027-02-28 while leaving room for the April brevet and the later PBP build. The 225 W FTP
baseline stays because there is no fresh sustained-power evidence to justify moving it.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered low-fatigue aerobic work without the planned cycling cadence
stimulus: Tuesday and Friday strength sessions were completed, Wednesday combined a short row with an easy
run, Thursday's trainer ride was missed, and Saturday's 2 h 05 min hike at 114 bpm average replaced the 90-
minute indoor endurance ride with well-controlled aerobic effort. Every recorded aerobic session respected
the 140 bpm ceiling, so fatigue is acceptable and the correct close is today's short optional run rather
than a make-up ride. Missed minutes are not recovered, because the next useful step toward the Atlas
Mountain Race and April brevet is fresh execution of Week 3's first controlled threshold stimulus. The
week's remaining technical priority is cadence above 85 rpm from the first minute of the next ride, since
smooth repeatable pedalling is what preserves power late in a 200 km day.",

OpenAI: GPT-6 Sol

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	A+	B	40.9 s	$0.0561	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00642	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.7/2 · Design 2.3/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean and matches today's date, planned status, 45-minute moderate gym session, non-outdoor flag and 220 W FTP, with the plan's two split-squat sets and a hinge-focused structure respected. The rationale is grounded in the athlete's reported quad burn and the weekend aerobic work, and it states what is lost by skipping. The description is concise and includes a back-pain stop rule and rest guidance, but it gives no load progression or RPE target and says only keep loads comfortable, which is vague for an athlete who wants exact sets, reps and loads. Season revision: The response names Atlas in the season goal and blocks, keeps block 1 starting on 2026-10-21, and revises weeks 2 to 7 with a changed block rationale, so the hard requirements are met. The season tiles contiguously from 2026-10-21 through 2027-08-31 with a credible Atlas build, two-week taper, post-race recovery and brevet and PBP phases. Weaknesses: the block name and rationale never name Atlas, the rowing day TSS drops from 70 to 37 without explanation, the season end date of 2027-08-31 is assumed rather than supplied, and today's description is largely a copy of the supplied one with the weather note reworded.

x-ai/grok-4.5

SpaceXAI: Grok 4.5

10.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	B	99.6 s	$0.0979	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00974	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.5/2

Combined judgment: Today plan: The response is valid JSON with only the requested today object, and it correctly keeps the planned Friday gym session as a 45-minute moderate workout with TSS 30, FTP 220 W, outdoor false and canBeOutdoor false. The exercise selection matches the plan's hinge and split-squat constraints and reflects the athlete's back and hip issues, with sets, reps, rest periods and a stop condition for split squats. Weaker points are the vague load prescription ('about 40-50 percent of what feels heavy' with no reference load) and the rationale, which is sound but leans on generic claims about blisters and posture rather than tying the session to the block's specific progression targets. Season revision: The response names Atlas throughout the season, block and week, keeps block 1 starting on 2026-10-21, and genuinely re-focuses that block toward ultra-distance durability, so the core mechanical requirements are met. The season tiles contiguously from 2026-10-21 to 2027-04-04 with correct week counts, and tomorrow, nextWeek, nextBlock and bodyMetrics are handled as required. Weaker points: the season spans roughly five and a half months of continuous work without explicitly addressing the athlete's four-month ceiling beyond labelling phases, the brevet series between Atlas and Paris-Brest-Paris is thin, and the Atlas taper sits in a short block ending after the race. The current week and today's session are coherent and grounded in the logged activities, but the detail for the remaining week is limited since only the current week's sessions exist.

TODAY PLAN

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "45-minute Gym Strength B session focused on safe posterior-chain hinge mechanics and
unilateral leg work to protect your lower back while building the hip strength and core stability needed for
a more aerodynamic cycling posture and blister-free long rides. Warm-up (5 min): 2 min easy bike or row + 10
bodyweight glute bridges + 10 cat-cows. Main circuit (3 rounds, 90–120 s rest between sets so HR drops below
110 bpm): (1) Elevated knee-height rack or trap-bar pulls 3×8 @ light load that keeps a perfectly flat back
(start ~40–50 % of what feels heavy); (2) Bodyweight rear-foot-elevated split squats 2×8/leg (stop if quad
burn becomes sharp); (3) Single-arm dumbbell row 3×10/side @ moderate weight; (4) Dead-bug or bird-dog
3×8/side slow and controlled; (5) Side plank 3×20–25 s/side. Cool-down: 5 min easy walk + the daily
unrecorded 8-minute hip/spine mobility circuit (couch stretch, forward fold, 90/90, deep squat hold, figure-
4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session directly builds the elevated hip-hinge pattern and unilateral
stability that let you hold a lower, pain-free position on the bike and eliminate sit-bone blisters and
climbing back ache—the exact qualities required for comfortable 200 km+ brevets and ultimately PBP. Skipping
it delays the safe loading progression your back needs and leaves the posterior chain under-prepared for the
volume that arrives in later blocks, slowing both fat-loss consistency and long-ride durability."

{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 with durable ultra-endurance fitness,
efficient cadence, and strength for loaded riding, then comfortably complete a 200 km brevet in April 2027
as the first of a randonneur series, while building the base for Paris-Brest-Paris in August 2027. Training
is structured in sustainable phases of at most about four months to match your history of consistent
progress.",
    "rationale": "Atlas Mountain Race is now the primary A-goal inside this season, so the year is built
backward from late-February ultra-distance demands: aerobic durability, steady power on long climbs,
fueling, and strength for hike-a-bike and loaded handling. The April 200 km brevet sits as a controlled
checkpoint three to four weeks after AMR recovery, and Paris-Brest-Paris remains the long horizon that
rewards the same aerobic engine. Because disciplined blocks have historically held for roughly four months
or less, each phase is kept purposeful and time-boxed, with clear recovery weeks and no filler intensity, so
you can sustain progress from the October base through February without burnout.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence above 85 rpm, and low-load strength without
stacking fatigue, as the foundation for Atlas Mountain Race",
    "rationale": "Ultra-distance success in the Atlas Mountains rests on a wide aerobic base, repeatable
cadence under fatigue, and enough strength for hike-a-bike and loaded handling. This seven-week block
therefore prioritises controlled heart-rate aerobic work, cadence from the first minute of every ride, and
two short full-body strength sessions per week at low systemic cost. Week 1 already delivered a high
realised load from the Zwift race and extra activity, so the progression stays conservative: Week 2 finishes
as a low-fatigue rebuild, Week 3 adds one controlled threshold stimulus only if aerobic execution stays
clean, Week 4 deloads, then Weeks 5–6 raise endurance volume toward the winter block while strength remains
maintenance-only. The 225 W FTP baseline is held until sustained power data justifies a change, and every
session must earn its place toward February durability rather than fill the calendar.",

z-ai/glm-5.1

Z.ai: GLM 5.1

10.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	D	D	331.1 s	$0.1927	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00687	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned, indoor, 45-minute moderate gym workout with TSS 30 and an FTP of 220 W, matching the current week and the Gym Strength B session referenced in the coach replies. The exercise selection is sensible for this athlete (elevated pulls, two split-squat sets, bridges, Pallof work) and the description gives sets, reps, rest, HR gating below 110 bpm, form cues and a back-discomfort fallback, though it does not state a progression rule beyond starting light. The rationale is specific to the posterior chain and sit-bone position, but it does not tie the session to the fat-loss goal or the evening-hunger concern that the block is built around. Season revision: The season is rebuilt around Atlas on 28 February 2027, PBP in August 2027 and the April brevet, and the nine blocks tile contiguously from 2026-10-21 to 2027-08-31 with block 1 starting correctly. Tomorrow, nextWeek and nextBlock are correctly left null and bodyMetrics is correctly empty. However, block 1 is barely changed from the supplied version: its name, focus, weeks and targets are essentially the same, with only the rationale naming Atlas, so the current block does not visibly accommodate the new goal. The current week and today's session are coherent but add little Atlas-specific preparation beyond generic cross-training language. The response also includes the extra coachQuestion and modelsRemarks keys, which is consistent with the base contract but not with the narrower key list in the revision request. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B — Safe Hinge Progression & Posterior Chain Stability\n\nWarm-up (5
min):\n• 3 min light cardio (treadmill walk, bike, or rower at easy effort)\n• 10 cat-cow with slow spinal
movement\n• 8 bodyweight hip hinges with hands on hips, focusing on flat back and pushing hips back\n\nMain
Sets (rest 90–120 sec between sets; let HR drop below 110 bpm before each set):\n\n1. Elevated Rack Pulls or
Trap-Bar Pulls (bar at knee height) — 3 × 8 reps\n   Start light (40–50 kg trap-bar or empty barbell on rack
pins). Focus on flat back, pushing hips back to the wall behind you, and squeezing glutes at the top. If any
lower-back discomfort, reduce the load or raise the bar one pin higher.\n\n2. Bodyweight Split Squats — 2 ×
8–10 per leg\n   Hold a support if needed for balance. Keep torso upright, front knee tracking over toes,
back knee dropping toward the floor. Controlled tempo: 2 sec down, 1 sec up.\n\n3. Glute Bridge (feet
elevated on bench or add resistance band above knees) — 3 × 12\n   Squeeze glutes hard at the top for a 2-
count. Keep ribs down so you don't arch your lower back.\n\n4. Pallof Press — 3 × 10 per side\n   Hold the
extended position for a full 2-count to challenge anti-rotation. Keep hips square.\n\n5. Side-lying
Clamshells (resistance band above knees) — 2 × 12 per side\n   Slow and controlled: open the top knee
without rolling your pelvis back.\n\n6. Plank — 3 × 30–40 sec\n   Straight line from head to heels. If your
back starts to sag, reset or shorten the hold.\n\nCool-down (5 min):\n• 90 sec standing forward fold with
soft knees, gradually straightening\n• 90 sec couch stretch or low lunge with hips pushed forward\n• 90 sec
supine figure-4 glute stretch\n• 60 sec cat-cow\n\nFinish with your daily 8-minute hip and spine mobility
circuit in the evening if not done here.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength and safe hip-hinge mechanics that
protect your lower back during long climbs and heavy work, and directly progresses the glute and hip
stability you need to hold a more aerodynamic, sit-bone-friendly cycling position. Skipping it means
delaying the hinge pattern that lets you eventually load deadlifts and squats safely — the very foundation
for pain-free riding and the 200 km brevet in April."
  }
}
```

SEASON REVISION

9.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

  "season": {
    "goal": "Build the ultra-endurance durability to complete the Atlas Mountain Race (February 28, 2027), a
200 km randonneur brevet (April 2027), and Paris-Brest-Paris (August 2027), with efficient cadence,
sustainable pacing, and the cross-training resilience to maintain training motivation across a ten-month
season.",
    "rationale": "The season spans October 2026 through August 2027 to prepare for three major events: the
Atlas Mountain Race in February, a 200 km brevet in April, and Paris-Brest-Paris in August. The athlete's
history of losing motivation after roughly four months of disciplined training demands built-in variety:
cross-training phases with skiing and running, distinct race targets that reset focus, and recovery blocks
after each major event. The current aerobic-base block establishes the durability foundation; winter
training builds threshold and AMR-specific endurance; post-AMR recovery resets before brevet preparation; a
varied spring-summer phase with cross-training keeps PBP preparation fresh; and the final block peaks
endurance for Paris-Brest-Paris. FTP starts at 225 W and should progress conservatively through consistent
aerobic and threshold work.",

xiaomi/mimo-v2.6-flash

10.1/12.5

Xiaomi: MiMo-V2.6-Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	D	A+	483.7 s	$0.00535	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00694	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.5/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is clean, uses the requested today object with the correct date, planned status, workout and moderate enums, 45 minutes, indoor flags and a bike workout of null, matching the outlined Friday gym session. The exercise list is specific and safe, with sets, reps, rest and hip-hinge cues. However, it cuts goblet squats to 2 sets, which departs from the current week plan of 3 steady sets, and it gives no load progression, RPE guidance or fallback for pain. The rationale is specific to the athlete's back, hips and fat-loss goal and states what is lost by skipping. Season revision: The response names Atlas throughout the season, the block focus and the rationale, keeps block 1 starting on 2026-10-21, and builds a credible sequence of Atlas build, two-week taper, race, recovery and brevet series. Its weaknesses are that the final block has six weeks listed for about 6.3 weeks of dates, the season end was moved to 2027-08-31 without a firm basis, and the completed Wednesday rowing and run were merged into one changed session. The coachQuestion about brevet and PBP dates is a reasonable clarification but was resolvable with a conservative assumption, and the weekly and daily rationales are specific and grounded in the 187 bpm race, the 587 TSS week and the 225 W FTP.

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session focused on safely rebuilding your hip hinge and posterior chain while
protecting your lower back. Warm up 8 minutes on the rower or bike plus hip CARs and cat-cow. Then: (1)
Knee-height rack pull or trap-bar pull — 3 sets x 8 reps at a light, controlled load, flat back, drive
```

```
through the hips, full 90–120 s rest so heart rate drops below 110 bpm; (2) Goblet squat — 2 sets x 10 reps
at 12 kg (holding volume down after Tuesday's quad burn), 2 min rest before the second set; (3) Lat pulldown
— 3 sets x 10 reps at 50 kg; (4) Bodyweight split squat — 2 sets x 8 reps per leg, rear foot elevated; (5)
Pallof press — 3 x 10 per side; (6) Plank — 3 x 30 s. Finish with 2–3 minutes of light stretching. Follow
with your unrecorded daily 8-minute hip and spine mobility circuit (couch stretch, standing forward fold,
90/90 hip rotations, deep squat hold, supine figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain and core strength that directly supports
your season goals: the elevated rack pulls safely re-teach the hip hinge you need to hold a lower, more
aerodynamic cycling posture without loading your vulnerable lower back, which is what currently causes your
sit-bone blisters and back ache on long climbs and rides. The Pallof presses and planks build the anti-
rotation core stability that keeps your pelvis stable in the saddle over Paris-Brest-Paris-length days, and
the split squats address the single-leg strength and hip flexibility behind your inability to touch the
floor. Skipping it costs you the progressive strength stimulus that this Autumn Re-Entry block exists to
establish before winter base building, and it would stall your fat-loss goal by removing the lean-muscle
maintenance that keeps your resting metabolic rate and protein-driven satiety up while you cut."

```
{
  "season": {
    "goal": "Reach the Atlas Mountain Race on 28 February 2027 ready for long mountain days over gravel,
then complete a 200 km brevet in April 2027, a randonneur brevet series, and Paris-Brest-Paris in August
2027, while keeping training varied enough to stay consistent beyond the athlete's usual four-month window
of disciplined training.",
    "rationale": "The season is built around the Atlas Mountain Race on 28 February 2027 as the primary
target, with the April 200 km brevet, the brevet series, and Paris-Brest-Paris in August 2027 as the follow-
on goals. From today there are 17 weeks to the AMR, which sits right at the edge of the four-month block of
disciplined training the athlete has historically sustained, so the plan front-loads variety — trainer
riding with cadence blocks, two short strength lifts, easy running, hiking and winter skiing — and breaks
the build into short blocks with distinct identities and visible milestones instead of one long repetitive
grind. Training stays aerobic-first with strict sub-140 bpm ceilings and cadence above 85 rpm until the base
is durable, because the realized load already includes a three-hour race at 187 bpm average plus unplanned
strength and pole-vaulting work that must be absorbed before intensity returns. FTP is held at the athlete's
stated 225 W until sustained power data supports a change. After AMR the season shifts to recovery and
conservative brevet pacing for April, then rebuilds long endurance, fuelling and back-to-back loading for
the brevet series and Paris-Brest-Paris.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue —
the aerobic platform for Atlas Mountain Race climbing",
    "rationale": "This block is the aerobic and strength platform for the Atlas Mountain Race on 28 February
2027: seven weeks from 21 October to 6 December that make low-intensity riding durable and efficient before
any intensity is added. Because the athlete's disciplined training has historically lasted no more than four
months, the block deliberately mixes trainer sessions with cadence blocks, two short strength lifts, easy
running, hiking and weekend outdoor work — variety that keeps adherence alive while the same underlying
quality (repeatable aerobic efficiency under 140 bpm with cadence above 85 rpm) is trained every week. Week
1 delivered roughly 587 TSS including a three-hour race at 187 bpm average and unplanned strength plus pole-
vaulting, so the progression stays conservative: Week 2 holds volume low with strict heart-rate control,
Week 3 may add a single controlled threshold stimulus only if aerobic execution stays stable, Week 4
deloads, and Weeks 5-7 rebuild toward 6-7 hours with one tempo block. FTP remains 225 W because no sustained
power evidence justifies a change.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what lets you hold long mountain days at the Atlas Mountain Race and still
finish a 200 km brevet in April.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "This run builds the weight-bearing aerobic durability that keeps your legs
accustomed to running motion through the winter base — the same low-level conditioning that lets you stay
moving during long self-supported days at the Atlas Mountain Race — and it is the final easy stimulus that
closes the week's target load before Week 3 adds a threshold session. Skip it and you lose that closing
aerobic touch and, more importantly, one more completed session in a week already short of a planned ride,
which is exactly the kind of gap that has broken your four-month training streak before.",

unbiased/pareto-26.10

10.1/12.5

Pareto 26.10

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	A	160.0 s	$0.0315	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00703	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.5/2 · Design 2.2/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.6/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned 45-minute moderate gym session with matching date, type, intensity, FTP and TSS, and sets outdoor and canBeOutdoor to false as a gym session should be. The exercise prescription is specific (sets, reps, rest, elevated hinge replacing floor deadlifts, capped split squats), which fits the athlete's back and quad constraints. Weaknesses: the description does not state load progression or an explicit RPE target for the pulls, the optionalRationale leans toward generic benefits rather than the concrete week target, and it does not mention a weight assumption for the lat pulldowns or a fallback if the back aches. Season revision: The season is genuinely re-planned around Atlas on 28 February 2027, with a coherent build, taper, event window and PBP-directed later blocks that tile contiguously, and block 1 correctly starts on 2026-10-21 with the current week and today revised consistently. The current block name, focus and rationale never name Atlas, which weakens the block-level Atlas link, and the season has minor defects: block 5 is labelled three weeks but spans about 2.3 weeks, the taper is labelled four weeks but spans about 3.3, and the Atlas event end and season end of 31 August are invented rather than supplied. Today's indoor 40-minute ride has accurate power percentages that sum to the stated duration and is well justified by the rain forecast, though its optionalRationale contains a muddled phrase about being the only recorded-or-planned cycling session.

```
    "bikeWorkout": null,
    "description": "Gym Strength B (45 min). Warm up with 5 min easy cardio and dynamic hip openers. Main
work: 3x8 light elevated knee-height rack or trap-bar pulls (hinge from the hips with a flat back, ~40-50%
of what feels heavy — technique first), 2x8 bodyweight split squats per leg (keep quads fresh), 3x12 glute
bridges, 3x10 lat pulldowns (build to a challenging but controlled weight), 3x10/side Pallof press, and
3x30s plank. Take 90-120s rest between sets so your heart rate drops below 110 bpm before each set. Finish
with your 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This is the week's second strength session and the first safe exposure to the
elevated hip hinge — the movement pattern that rebuilds your lower-back resilience and lets you hold a more
aerodynamic position on long rides without pain. Skipping it would leave your posterior chain and core
under-stimulated this week, delaying the back-protection progress that Paris-Brest-Paris and the brevet
series depend on, and would also reduce the muscle-preserving stimulus that keeps your fat-loss phase
effective."

    "alternatives": [
      "If your legs feel unusually heavy, ride only 20 minutes at an easy conversational effort without
chasing the prescribed power.",
      "If you have pain, illness symptoms or substantial fatigue, take a full rest day and do not make up
the session."
    ],
    "rationale": "You have useful general aerobic work from yesterday's hike and two strength sessions this
week, but little recent cycling-specific practice. Forty minutes of low-resistance riding gives you
controlled pedaling and saddle exposure without another substantial muscular or impact load. This supports
the block's cycling-consistency focus and your longer-term ability to tolerate successive riding days at
Atlas and sustained road riding during your brevet series. Today's 3-8 °C rain makes the trainer a practical
setting for this controlled session.",
    "optional": false,
    "optionalRationale": "You build cycling-specific aerobic efficiency, comfortable pedaling and repeatable
saddle exposure toward the durability required for Atlas and Paris-Brest-Paris. At approximately 22 TSS,
this keeps your week near its modest 202 TSS total while providing its only recorded-or-planned cycling
session. Skipping it would leave a gap in the block's central cycling-consistency objective; shortening it
is preferable if your legs are tired, while pain or illness still warrants rest.",

mistralai/mistral-large-4-0

10.1/12.5

Mistral: Mistral Large 4

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	D	C	300.4 s	$0.1202	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00670	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate correctly keeps the planned 2026-10-30 gym session as a valid, indoor, moderate 45-minute workout with TSS 30 and FTP 220 W, and it follows the coach's Week 1 modifications (split squats limited to two bodyweight sets, knee-height pulls instead of floor deadlifts, the 110 bpm rest gate, and the lat pulldown 30/40/50 kg progression). The rationale ties the session to the lower-back, hip-hinge and saddle-pressure goals and to the fat-loss target. Weaknesses: the warm-up and total time budget are not itemised, there is no explicit stop condition for back or hip pain, and load progression beyond the lat pulldown weights is thin. Season revision: The candidate names Atlas throughout the season goal, the block structure and the new Atlas block, keeps block 1 starting on 2026-10-21, tiles the season contiguously to 2027-04-04, and leaves tomorrow and nextWeek null as required. Its weakest point is design: the Atlas race on 28 February falls inside the new block 4, which starts 22 February, so there is no real taper before the race, and the April brevet and Paris-Brest-Paris are only lightly reflected in the later blocks. The rationale for today and the week is athlete-grounded, but it refers to a tomorrow session that is null and merges the past Wednesday rowing and run into one record, which weakens coherence and grounding somewhat.

TODAY PLAN

10.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
22.5 s	$0.0152	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.5/3 · Rationale 1.8/2 · Grounding 1.7/2 · Detail 1.4/2

Judgment: The candidate correctly keeps the planned 2026-10-30 gym session as a valid, indoor, moderate 45-minute workout with TSS 30 and FTP 220 W, and it follows the coach's Week 1 modifications (split squats limited to two bodyweight sets, knee-height pulls instead of floor deadlifts, the 110 bpm rest gate, and the lat pulldown 30/40/50 kg progression). The rationale ties the session to the lower-back, hip-hinge and saddle-pressure goals and to the fat-loss target. Weaknesses: the warm-up and total time budget are not itemised, there is no explicit stop condition for back or hip pain, and load progression beyond the lat pulldown weights is thin.

    "bikeWorkout": null,
    "description": "Gym Strength B, 45 min indoors: 5 min easy spin/row warm-up, then elevated knee-height
rack or trap-bar pulls 3x8 (light, flat back, no floor deadlifts), bodyweight split squats 2x10/side (short
```

```
stride, controlled), glute bridges 3x12, lat pulldown 3x10 (30/40/50 kg progression), Pallof press
3x10/side, plank 3x30 s. Rest 90–120 s between sets and start each set only when HR is below 110 bpm; finish
with your 8-min hip/spine mobility circuit. This session builds the safe hip-hinge, glute, and anti-rotation
strength that protects your lower back and reduces sit-bone load on long rides while keeping Week 1 inside
its moderate, fat-loss-friendly load.",
    "optional": false,
    "optionalRationale": "This is not optional: it is one of Week 1's two strength stimuli and the main
posterior-chain/core work in the Autumn Re-Entry block. Skipping it would cost you the hip-hinge resilience
and glute/core stability that keep your back unloaded on climbs and prevent saddle blisters on brevet-length
rides, and it would leave the week below its planned moderate load without the muscle-preserving signal that
supports steady fat loss."
  }
}

{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 and then the 200 km brevet in April 2027
with durable aerobic endurance, efficient climbing and self-sufficient pacing, as stepping stones toward
Paris-Brest-Paris in August 2027.",
    "rationale": "The season runs from 2026-10-21 to 2027-04-04 and is shaped around the Atlas Mountain Race
on 28 February 2027 as the first major target, with the April 200 km brevet and Paris-Brest-Paris in August
2027 behind it. Because you can hold disciplined training for at most about four months, the plan peaks at
the end of February — four months from today — and then asks only for brevet-specific consistency rather
than a second fitness peak. The current aerobic-base block builds the durable engine, cadence above 85 rpm
and low-load strength the race demands; the winter block adds controlled threshold work plus skiing and easy
running; the January-to-February build progresses sustained power, long weekend rides and climbing and
fueling practice; and the final block covers race week and brevet preparation through 4 April 2027.
Progression stays conservative because the unplanned three-hour race in the week of 19 October showed that
fatigue has to be managed, not stacked.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "Week 2 kept every aerobic session under the 140 bpm ceiling and fatigue is low, so today
adds only a short, strictly aerobic run to close the week's shape before Week 3's first controlled threshold
stimulus tomorrow. Thirty easy minutes maintain the running-specific durability that supports your cycling
base through the winter on the way to the Atlas Mountain Race, at a cost that will not compromise tomorrow's
session. It stays indoors because rain and gusts up to 7 m/s are forecast all day, and the 115-135 bpm
ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "This run keeps the running-specific aerobic durability that supports the aerobic
base this block is building toward the long hours of the Atlas Mountain Race, and it completes Week 2's low-
fatigue target of roughly 240 TSS with every session under 140 bpm. If you skip it, you lose that small
durability stimulus and the week's unbroken string of aerobic days, though nothing in the block depends on
these 30 minutes alone.",

openai/gpt-6.1-sol-pro

10.1/12.5

OpenAI: GPT-6.1 Sol Pro

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	D	93.2 s	$0.2567	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00740	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, outdoor false and FTP 220 W, and the TSS matches the plan. The session is well built for a conservative hinge-and-core day, with sensible sets, rest periods, RIR-style effort guidance, fallbacks and stop conditions. Weaknesses: the stated duration of 53 minutes departs from the planned 45-minute gym session, the hinge uses dumbbells or kettlebells rather than the knee-height rack or trap-bar pulls the plan specified despite the athlete having a full gym, and no heart-rate guidance is given for this non-cycling session. Season revision: Strong points: Atlas is named in the season goal, the block rationale and several block names, block 1 starts on 2026-10-21 and is genuinely changed, the season tiles contiguously through 2027-08-31, the week has seven sessions that sum to about 190 TSS, the 225 W FTP is used correctly, the indoor ride respects the rain forecast, and tomorrow and the next week and block stay null. Weak points: the plan runs disciplined training from October to late May with only one reset week, which strains the athlete's stated four-month ceiling. Block 1 still starts its first week on 2026-10-19, and some block and week text reads as commentary on the revision rather than the plan as it stands. The coachQuestion and modelsRemarks keys are omitted, and the rationale and detail are good but not exceptional.

```

```
    "description": "Complete approximately 45 minutes in the gym, then 8 minutes of comfortable mobility. Warm up with 5 minutes of easy stationary cycling and 8 unloaded hip hinges. Keep every working set controlled, with at least 3–4 repetitions in reserve; your current hinge strength is unknown, so start with the lightest practical load.\n\n1. Elevated kettlebell or dumbbell deadlift from blocks near knee height: 2 × 8. Keep the weight close, brace gently and move through your hips without rounding your back. Rest 2 minutes. If you cannot find a comfortable, pain-free hinge, use floor glute bridges, 2 × 12, instead.\n2. Supported bodyweight split squat: 2 × 6 per leg, using a comfortable depth. Rest 90–120 seconds between sets; omit the second set if your quads remain notably sore or your control deteriorates.\n3. Chest-supported machine row: 2 × 10, resting 90 seconds.\n4. Machine chest press: 2 × 10, resting 90 seconds.\n5. Pallof press: 2 × 10 per side, pausing briefly with your arms extended. Rest 60 seconds.\n6. Bird dog: 2 × 5 per side with a 3-second hold, keeping your pelvis still.\n\nFinish with 8 minutes of gentle mobility: approximately 80 seconds each of low-lunge hip-flexor stretch, supported soft-knee forward fold, 90/90 hip rotations, supported shallow squat hold, supine figure-4 stretch and small-range cat-cow. Divide time between sides where applicable. Do not force spinal flexion or stretch into pain. Stop any exercise that produces back pain rather than ordinary muscular effort.",
    "rationale": "Your controlled Tuesday lifting and comfortable Wednesday run/row support a second conservative strength exposure after a recovery day. Low-volume hinge practice, supported leg work and trunk stabilization develop the strength you need to tolerate long climbs and sustained cycling positions without unnecessarily tiring your legs before the weekend hike. Progressive strength training also helps preserve muscle during gradual fat loss.",
    "optional": false,
    "optionalRationale": "You are building posterior-chain strength, single-leg control and trunk endurance for comfortable brevet and Paris-Brest-Paris riding. This second weekly gym exposure supports the foundation block within approximately five hours of structured training this week, before mobility. Skipping it would remove your only dedicated hinge-practice session and reduce the strength stimulus supporting muscle retention during fat loss; keep the loads conservative rather than chasing fatigue."

deepseek/deepseek-v4-flash-0731

10.0/12.5

DeepSeek: DeepSeek V4 Flash 0731

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	C	A+	252.1 s	$0.00651	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00700	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate returns a clean today object for 2026-10-30 that matches the planned 45-minute moderate gym session, with indoor flags, FTP 220 W and TSS 30 all consistent with the plan. The exercise selection follows the current week's constraints: elevated rack or trap-bar pulls instead of floor deadlifts, two bodyweight split-squat sets, lat pulldowns building on the logged 30 to 50 kg progression, Pallof presses and planks, with the 90 to 120 second rest the coach asked for. The rationale is specific to the hinge, back protection and the fat-loss calorie deficit, and it states what is lost by skipping. Weaker points are the absence of load guidance for the rack pulls and the lack of a pain stop rule or RPE cue, which would have sharpened execution. Season revision: Atlas Mountain Race is named in the season goal and in the new Atlas Mountain Race Build block, block 1 starts on 2026-10-21 and its weeks are changed, the blocks tile contiguously to 2027-04-04, and the nextWeek, nextBlock and tomorrow fields stay null. The main design weakness is that the season has no taper before the 28 February Atlas race, which is treated as the end of a build rather than a peak, and the current week contains no cycling at all despite the athlete wanting power-targeted cycling. Past-session TSS values were also quietly revised and the output adds coachQuestion and modelsRemarks beyond the eight keys the revision request listed.

TODAY PLAN

```

```
    "bikeWorkout": null,
    "description": "Complete a 45-minute Gym Strength B session. Warm up with 5–6 minutes of easy cardio and dynamic hip mobility. Main work: (1) Elevated knee-height rack pulls (or trap-bar pulls) – 3 x 8–10 with a light, controlled load, resetting a flat-back hip hinge on every rep to protect your lower back; (2) Bodyweight split squats – 2 x 8–10 per leg with a slow tempo to keep quad fatigue manageable; (3) Loaded glute bridges – 3 x 12; (4) Lat pulldown – 3 x 10, continuing your progress from 30–50 kg while keeping the last rep crisp; (5) Pallof press – 3 x 10 per side; (6) Front plank – 3 x 30–45 seconds. Rest 90–120 seconds between sets so your heart rate drops below 110 bpm before each set. Finish with 5 minutes of hip/spine mobility.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength, hip-hinge control, and core anti-rotation stability that carry you toward a pain-free, more aerodynamic cycling posture, protect your lower back on long climbs, and preserve muscle while you create the calorie deficit for fat loss. Skipping it removes the week's only progressive strength stimulus, leaving your back and glutes less durable for Saturday's hike and the long rides ahead."

z-ai/glm-5.3-flash

Z.ai: GLM 5.3 Flash

10.0/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	75.3 s	$0.00787	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00657	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate returns a clean today object dated 2026-10-30 as a planned moderate 45-minute gym workout with TSS 30, matching the plan, and it correctly sets outdoor false and bikeWorkout null. The exercise list follows the week's prescribed structure (knee-height pulls, two split-squat sets, glute bridges, row or pulldown, Pallof, plank) with sets, reps, rest and a heart-rate rest gate. The rationale is tied to the plan and the skipped-deadlift history, but the claim that floor deadlifts aggravated your back is not stated in the input, and the 40 kg starting load for pulls is an unflagged assumption. Season revision: The season tiles contiguously from 2026-10-21 to 2027-08-22, names Atlas in the goal, the block list and the new Atlas build and taper blocks, and keeps block 1 starting on 2026-10-21 with tomorrow, nextWeek and nextBlock correctly null. However, block 1 itself changes only in its rationale, and the week and today sessions are carried over almost unchanged apart from a trimmed optionalRationale, so the current block and week are barely re-planned for the Atlas goal. The Wednesday rowing TSS was also silently cut from 70 to 15 without explanation, and the season rationale opens with meta wording about the plan now spanning the period. The Paris-Brest-Paris date is flagged as an assumption, which is honest, but the endDate of 2027-08-22 rests on it. Hard gates failed: block 1 is unchanged.

TODAY PLAN

10.9/12.5

```

```
    "bikeWorkout": null,
    "description": "Second gym session of the week at your full gym. Warm up 5 minutes on the bike or rower, then: (1) Knee-height rack or trap-bar pulls, 3 x 8 at a light load — start around 40 kg and only add weight once the flat-back hinge pattern is perfect; push your hips back and stand tall, resting 90–120 s until your heart rate is below 110 bpm before each set. (2) Bodyweight split squats, 2 controlled sets x 8–10 per leg, no added weight while Tuesday's quad burn fades. (3) Loaded glute bridge, 3 x 12 (add a light weight if bodyweight still feels easy). (4) Chest-supported row or lat pulldown, 3 x 10 at a moderate load. (5) Pallof press, 3 x 10 per side. (6) Plank, 3 x 30 s. Finish with your 8-minute hip and spine mobility circuit (couch stretch, forward fold, 90/90 hips, deep squat hold, figure-4, cat-cow).",
    "rationale": "This is the second conservative gym session of Week 1 and completes the two-day strength split. The knee-height elevated pulls rebuild your hip-hinge pattern from a safe position after floor deadlifts aggravated your back, the two bodyweight split-squat sets respect the quad burn you reported on Tuesday, and the Pallof press and plank work target the core strength and stability your second goal calls for. Holding 90–120 s rests with heart rate below 110 bpm keeps the session at moderate stress so it supports fat loss without spiking evening hunger, and it fits the week's 5.0–5.5 hour target load.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain hinge strength and core stability that protect your lower back on long climbs and let you hold a lower, more sustainable cycling posture toward the spring brevets and Paris-Brest-Paris — it is the second of your two weekly strength stimuli inside the 5.0–5.5 h Week 1 load. Skipping it halves this week's strength stimulus, stalls the safe hinge progression you need before Week 2 adds load, and costs you a day of the lean-mass-preserving work that underpins your fat-loss goal."
  }
}

{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027, then comfortably complete a randonneur brevet series starting with a 200 km brevet in April 2027, and ride Paris-Brest-Paris in August 2027.",
    "rationale": "The season now spans from the current base block through Paris-Brest-Paris in August 2027, with the Atlas Mountain Race on 28 February 2027 as the first A-event. The blocks that build toward it keep the conservative aerobic-first progression you have responded well to, then shift into ultra-specific endurance: long rides, back-to-back weekend days, climbing durability, and fueling practice, because a self-supported mountain ultra rewards sustained low-intensity output and pacing discipline far more than raw threshold power. After the race, a dedicated recovery and rebuild block protects you before the April 200 km brevet, and the spring brevet series (200, 300, 400, 600 km) doubles as both your stated goal and the natural qualification path for Paris-Brest-Paris. Because you have told me disciplined training has historically lasted at most about four months for you, the plan deliberately rotates emphasis every few weeks — cycling, strength, skiing and running — and places recovery weeks and a full post-race rebuild at fixed points, so no single monotone phase runs long enough to burn you out. I assume Paris-Brest-Paris falls in mid-August 2027; if the exact date differs, the final taper block shifts accordingly.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This seven-week block is the foundation for everything that follows: the Atlas Mountain
Race on 28 February 2027 is an ultra-distance mountain event, and its single biggest determinant is a large,
durable aerobic base built at low intensity. The block therefore prioritizes strict aerobic control (heart
rate under 140 bpm, cadence above 85 rpm from the first minute of every ride), low-load full-body strength,
and gradual volume progression toward six to seven hours per week. The conservative shape also respects two
things you have told me: your recent three-hour race at 187 bpm average heart rate added real fatigue that
had to be absorbed first, and your history of sustaining disciplined training for at most about four months
means this phase must stay varied and sustainable rather than aggressive. One controlled threshold stimulus
```

```
enters in Week 3 only if Week 2 demonstrated stable aerobic execution, followed by the planned Week 4
deload. The 225 W FTP baseline is retained because no fresh threshold test or sustained power evidence
justifies a change.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
```

```
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and ultimately the Atlas Mountain
Race.",

HARD GATES	JUDGE COST	JUDGED
pass	$0.00727	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.7/2 · Design 2.2/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.6/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the date, planned status, indoor workout type, 45-minute duration, moderate intensity, and 220 W FTP from the plan. The session is well chosen: knee-height rack pulls, supported split squats, rows, floor presses and Pallof presses, with specific sets, reps, rest, a reps-in-reserve load rule and a stop condition for back pain. The main weakness is the rationale, which is a brief, mostly generic statement that does not tie the session to the fat-loss goal, the block's target load or the athlete's hunger problem. The extra rationale field inside today is a minor contract deviation, and the description gives no concrete load progression or fallback for missing equipment. Season revision: Atlas is named throughout the season, the block and today, block 1 starts on 2026-10-21 and is genuinely revised, the season tiles contiguously through the Atlas taper, event and recovery and on to PBP, and tomorrow, nextWeek and nextBlock stay null. Today's intervals are internally consistent with the 225 W FTP (53, 60 and 51 percent of 225 W sums to 50 minutes). Weaknesses: the Atlas build is compressed into a few weeks with little Atlas-specific detail beyond block 1, the 2026-11-01 Atlas-relevant rationale is generic, the manual 2026-10-21 activity is ignored, and the block 1 week 1 targetLoad wording about the race on 20 October is confusing.

    "bikeWorkout": null,
    "description": "You have about 45 minutes, including mobility. Warm up for 5 minutes with easy walking
and unloaded hip hinges. Then do: knee-height rack pulls, 2 sets of 6 with a very light load; supported
bodyweight split squats, 2 sets of 8 per side; chest-supported rows, 2 sets of 10; dumbbell floor presses, 2
sets of 8; and Pallof presses, 2 sets of 10 per side. Choose loads that leave at least 3 comfortable
repetitions in reserve, and rest about 60–120 seconds between sets. Keep your back neutral on the pulls;
stop that exercise if you feel back pain. Finish with about 8 minutes of your gentle hip and spine mobility
routine.",
    "rationale": "Your second gym session builds on Tuesday's manageable strength work while giving your
quads and back a conservative introduction to split squats and a light elevated hinge.",
    "optional": false,
    "optionalRationale": "This session develops the leg, hip and trunk strength that can help you tolerate
long climbs and an extended riding position as you build toward your brevets and Paris-Brest-Paris. Skipping
it would cost you this week's second opportunity to practise the hinge and build that resilience during re-
entry."

10.0/12.5

MoonshotAI: Kimi K2 Thinking

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	D	B	430.6 s	$0.0601	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00668	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.1/3 · Rationale 1.6/2 · Grounding 1.4/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is valid, the today object has the right date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, FTP 220 and null bikeWorkout, and the session follows the plan's Friday gym structure with goblet squats, trap-bar pulls and two split-squat sets. The exercise prescriptions are specific, with sets, reps, rest, form cues and a stop rule, and the load assumption for the pulls is stated. Weaknesses: the warm-up suggests a rower, which the athlete's gym does not have, and the seven-exercise list with a 45-minute cap is crowded, so the description is long and partly padded. The optionalRationale states a concrete cost of skipping, though it is somewhat generic about injury risk. Season revision: The candidate names Atlas throughout the season, block, week and today, keeps block 1 starting on 2026-10-21, and tiles the later blocks without gaps through the season end, with the required eight keys present. Its weaknesses are that it mislabels Atlas as a February mountain bike race, which is not in the input, that it rewrites the Wednesday past session into a merged double-day with an inflated 100 TSS, and that block 1 changes little beyond the focus and rationale wording. Cycling blocks lack concrete power or heart-rate targets for the future weeks, and the 4-month disciplined-training limit is claimed but only loosely reflected in the 16-week build blocks.

    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Today’s gym session is deliberately placed after Thursday’s recovery to let your quads
and lower back absorb Tuesday’s squat volume and Wednesday’s run/row impact before reloading the hinge
pattern. This moderate 45-minute Strength B session builds the safe hip-hinge mechanics and single-leg
stability that reduce back ache on climbs and shift weight off your sit bones during long rides, directly
supporting your primary fat-loss goal by preserving lean muscle while keeping effort controlled enough to
avoid evening hunger spikes. Warm-up: 5 minutes easy spin on a gym bike or rower at <100 W / <110 bpm, plus
dynamic hip circles and leg swings. Main work: (1) Goblet Squat 3 x 10 reps @ 12 kg — hold the dumbbell at
your chest, keep elbows in, squat to a comfortable depth with a tall spine; if sharp quad burn returns
before the final set, stop at 2 sets. (2) Elevated Rack Pull or Trap-Bar Pull (bar or handles at mid-shin to
knee height) 3 x 8 reps @ a conservative 20–30 kg total — assume a light load since you have not yet
reloaded the hinge pattern; brace your core, maintain a perfectly flat back, drive through the hips, and
stop the moment form breaks. (3) Bodyweight Split Squat 2 x 8–10 reps per side — rear foot on a low bench or
floor, torso upright, controlled 2-second lowering; this builds hip-flexor length and single-leg stability
for riding and running. (4) Single-Arm Dumbbell Row 3 x 10 reps per side @ 14–18 kg — support on a flat
bench, keep back flat, pull elbow to hip. (5) Seated or Standing Dumbbell Overhead Press 3 x 10 reps @ 10–12
kg — brace your core to prevent lower-back arch. (6) Side Plank 3 x 30 seconds per side. (7) Dead Bug 3 x 8
reps per side, 3-second exhale on each extension. Rest 90–120 seconds between all heavy sets, allowing heart
rate to drop below 110 bpm before the next set. Finish with your standard 8-minute hip and spine mobility
circuit (couch stretch, forward fold, 90/90 rotations, deep squat hold, figure-4 stretch, cat-cow).",
    "optional": false,
    "optionalRationale": "Skipping this session costs you the protected hip-hinge patterning and single-leg
stability that directly reduces lower-back strain on long climbs and sit-bone pressure during ultra-distance
rides. Without it, you delay the postural adaptations needed for Paris-Brest-Paris and increase injury risk
when heavier winter loads arrive."
  }
}
```

SEASON REVISION

9.4/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
248.1 s	**$0.0330**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.1/3 · Rationale 1.6/2 · Grounding 1.4/2 · Detail 1.4/2

Judgment: The candidate names Atlas throughout the season, block, week and today, keeps block 1 starting on 2026-10-21, and tiles the later blocks without gaps through the season end, with the required eight keys present. Its weaknesses are that it mislabels Atlas as a February mountain bike race, which is not in the input, that it rewrites the Wednesday past session into a merged double-day with an inflated 100 TSS, and that block 1 changes little beyond the focus and rationale wording. Cycling blocks lack concrete power or heart-rate targets for the future weeks, and the 4-month disciplined-training limit is claimed but only loosely reflected in the 16-week build blocks.

nvidia/nemotron-3.5-super-vl:free

9.9/12.5

NVIDIA: Nemotron 3.5 Super VL (free)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	D	A+	344.8 s	$0	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00668	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.1/1.5 · Fidelity 1.4/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, and the session correctly stays a planned 45-minute moderate indoor gym day with bikeWorkout null and FTP 220 W. The exercise list follows the weekly plan and the athlete's recent feedback, including elevated hinge pulls, two split-squat sets, rest periods and the heart-rate ceiling. The main weakness is that the pull load is only described as light, with no load progression, RPE target, or stop condition for the back, and the rationale leans somewhat on generic benefits. Season revision: The season and block name Atlas Mountain Race Preparation, block 1 keeps its 2026-10-21 start, and the season tiles cleanly through 2027-08-31 with Paris-Brest-Paris preserved. The Atlas block, however, ends on the race date itself, so there is no taper before Atlas and the taper blocks come only after the brevet, which is a design flaw. The output also adds coachQuestion and modelsRemarks at top level despite the request for exactly eight keys, and it rewrites completed past sessions by merging the rowing and run and changing durations and TSS. Today's easy treadmill run is sensible and well explained, and the athlete's 4-month limit is addressed through embedded deloads.

deepseek/deepseek-v4.1-flash

9.9/12.5

DeepSeek: DeepSeek V4.1 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A	A+	80.2 s	$0.0136	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00649	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, 45-minute moderate gym session, 220 W FTP and 30 TSS all match the current plan, and the exercise list is specific with sets, reps, rest and a heart-rate recovery gate. However, the plan calls for three steady goblet squat sets this week and the candidate drops goblet squats entirely while using two split-squat sets as specified, so the session departs from the prescribed week structure without explanation. The optionalRationale is well grounded in the back and sit-bone problems and the block focus, but the description also embeds a Rationale label inside the workout text, which is messy, and it omits RPE or load-progression guidance for the new pull and lat pulldown loads. Season revision: The season was genuinely refreshed: it names the Atlas Mountain Race, keeps block 1 starting on 2026-10-21, and tiles the blocks contiguously through 2027-08-29 with PBP in its own block. The Atlas build is a separate block ending on the race date, but there is no pre-race taper before 28 February and the April 200 km brevet is not explicitly placed inside the brevet block. Block 1 itself changed only lightly, mainly in its rationale and week 2 target load, and its name and focus still do not mention Atlas. The current week and today's session are coherent and keep the supplied planned workout, though the past Wednesday rowing and run were merged into one session, which alters the record somewhat.

```
    "bikeWorkout": null,
    "description": "Warm up 5–8 min easy row/bike/walk plus dynamic hip openers, cat-cow, 90/90, glute
bridges, and bodyweight squats. Main: 1) elevated knee-height rack pulls or trap-bar pulls from blocks, 3x8
light-moderate with a flat back and no rounding, resting 90–120 s; 2) bodyweight split squats, 2x10 per leg,
controlled tempo, 90 s rest; 3) glute bridges, 3x12; 4) lat pulldown, 3x10 at 45–50 kg as form allows; 5)
Pallof press, 3x10 per side; 6) front plank, 3x30–40 s. Finish with the 8-min hip/spine mobility circuit.
Keep rest long enough that heart rate drops below 110 bpm before each set. Rationale: this is your second
strength exposure of Week 1, rebuilding safe hip-hinge mechanics and core stability for long-distance
cycling posture and lower-back resilience without excessive fatigue.",
    "optional": false,
    "optionalRationale": "This session builds the hip-hinge and posterior-chain strength that protects your
back on long climbs and supports a more sustainable cycling posture, while the core work addresses your sit-
bone discomfort and injury history. It contributes to the Autumn Re-Entry block's focus on safe strength and
mobility and to Week 1's 5.0–5.5 h multimodal target load. Skipping it costs you the chance to establish the
safe elevated hinge pattern and core stability that underpins your 200 km brevet and Paris-Brest-Paris
durability while preserving muscle during fat loss."

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control.",
    "rationale": "The week delivered its aerobic purpose without the cadence-specific cycling: two strength
sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed Thursday trainer
ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned 90-minute
trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the week closes
with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and Sunday stays
deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-minute run
keeps running-specific durability alive at minimal cost, and the week's remaining priority — cadence above
85 rpm from the first minute of every ride — carries into next week, because repeatable efficiency at low
intensity is what carries you through long-distance cycling.",

minimax/minimax-m3.1-flash

9.9/12.5

MiniMax: MiniMax M3.1 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A	A+	59.9 s	$0.0142	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00689	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 1.4/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The response matches the required today object, uses the correct date, planned status, workout and moderate values, 45 minutes, indoor flag, 30 TSS and 220 W FTP, and it keeps the session as the gym day the plan specifies. The exercise prescription is specific, with sets, reps, rest periods, knee-tracking and hinge cues, a heart-rate ceiling below 110 bpm before pulls, and a mobility finish, though the rack or trap-bar pull load is only described as light and the lat pulldown load is a loose range. The rationale ties the session to posterior-chain and spine stability for the saddle and the brevet goals and states a concrete cost of skipping, but the content is partly repeated between description and optionalRationale. Season revision: The plan works Atlas into the season, block names and block 1 focus and rationale, keeps block 1 starting on 2026-10-21, and the season blocks tile cleanly to 2027-08-29 with consistent week counts. It also leaves tomorrow, nextWeek and nextBlock null and fully details today. Weaknesses: the output adds coachQuestion and modelsRemarks beyond the eight requested top-level keys, the Atlas build block ends on race day with no taper before it, the season rationale mentions a four-week taper that the final block (three weeks) does not match, and the coachQuestion asks about Atlas details the plan could have assumed conservatively. The Wednesday double was also merged into one past session, which alters the recorded history.

    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Friday Gym Strength B is the second strength exposure of the re-entry week, and it
targets exactly the chain that is limiting you right now: hips and posterior chain for a back-safe hinge,
quads that are still re-adapting to loaded work, and trunk control for long rides. Your pulling and core
strength are clearly ahead of your legs, and both your 22 October and 27 October sessions ended with quad
burn, so the hinge is rebuilt light and unloaded while the squat and split-squat volume stays conservative.
Session (45 min, moderate): (1) Warm-up 8 min — 4 min easy walk/cycle on gym equipment at conversational
effort, 2 min bodyweight hip-hinge rehearsal with a flat back (band pull-aparts or wall glute), 2 min 90/90
hip rotations plus a deep squat hold with heels down, holding support if needed. (2) Goblet squat 12 kg, 3
sets × 8–10 reps — take a full 120 s rest before the third set and end the set if the quad burn returns;
knees track over toes. (3) Elevated knee-height rack pull or trap-bar pull at a light load, 3 sets × 8 reps
— flat back, ribs stacked, hips hinge back, drive the floor away; 90–120 s rest between sets so heart rate
settles below 110 bpm before each pull. (4) Bodyweight split squat, 2 controlled sets × 6–8 reps per leg,
90–120 s rest, full foot pressure through the arch. (5) Lat pulldown, 3 × 10 at a load you can control
cleanly (around 40–50 kg as tolerated, no grinding reps). (6) Pallof press 3 × 10 per side with a slow
braced hold, then plank 3 × 30–40 s, stopping each rep before your back rounds. (7) Finish with your 8-
minute hip/spine mobility circuit: couch stretch or low lunge, standing forward fold with soft knees, 90/90
hip rotations, deep squat hold, supine figure-4 glute stretch, cat-cow. This session is right for you now
because it keeps every load in the moderate Zone 2 range that supports steady fat loss without triggering
the evening hunger spikes you fight, while giving the hip hinge and spine the specific stimulus that
protects you on long climbs, in the saddle and in crouching work.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain hinge control, quad capacity and core
stability that let you hold a pain-free riding position and absorb the hours on the bike that your April 200
km brevet and August 2027 Paris-Brest-Paris require, and it is the second strength exposure that makes this
block's conservative two-day gym structure work. The week's target load is 5.0–5.5 hours (two 42–45 min gym
sessions, a 47 min run/row combo, a 65 min Zone 1–2 ERG ride, a capped 2 h hike, plus daily 8-minute
mobility). Skipping it removes your only posterior-chain and spine-stability stimulus for the week, slows
the back-safe hinge rebuild, and leaves the weekend hike and Sunday ERG ride carrying your legs without the
stability work beside them, so the cost is real and the session is not optional today."
  }
}
```

SEASON REVISION

8.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
45.6 s	**$0.0102**	**no**	**yes**	**200**	**stop**

Contract 0.9/1.5 · Fidelity 1.4/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.4/2

{
  "season": {
    "goal": "Peak for the Atlas Mountain Race on 28 February 2027, complete the first 200 km brevet in early
April 2027, and build to Paris-Brest-Paris in August 2027 with durable aerobic endurance, efficient climbing
cadence, and enough strength to handle long days on the bike.",
    "rationale": "The season is built around two peaks and a sustainable middle. The first peak is the Atlas
Mountain Race on 28 February 2027, which you have signed up for and which rewards climbing-specific
endurance, sustained power and back-to-back load; the second is Paris-Brest-Paris in August 2027, a 1200 km
challenge that demands very high aerobic volume and overnight durability. The 200 km brevet in early April
2027 sits between them as the first step of the randonneur series and as a low-stakes test of the fueling
and pacing you will use in August. Because you have said disciplined training rarely holds for more than
four months, the season is deliberately shaped as two arcs of roughly four months each with a genuine reset
between them: an October-to-February build that peaks at the mountain race, a short recovery and brevet
block in March and April, then a second arc from May to August that rebuilds toward Paris-Brest-Paris with a
mid-season reset in late May and a four-week taper. Every block keeps aerobic work capped, strength logged
separately, and missed minutes unrecovered, because consistency across the arcs is what will actually get
you to both goals.",

Race on 28 February 2027 and the 200 km brevet that follows in April: durable aerobic fitness, cadence above
85 rpm on flat riding, and low-load full-body strength, with no stacking of fatigue. Your own history of
holding a disciplined plan for at most four months means this block has to deliver repeatable, low-drama
execution rather than heroics, and the week to date shows that pattern working — every aerobic effort stayed
```

```
under the 140 bpm ceiling, the missed Thursday trainer ride was not chased, and the week closes with a short
controlled run. Realized load is roughly 295 TSS against a 180-220 TSS target because the extra 32-minute
run and the 2 h 05 min hike added volume that was not in the plan, so Week 3's single controlled threshold
stimulus enters at the low end of its range, the 225 W FTP estimate is held until a fresh test or sustained-
power evidence justifies a change, and the planned Week 4 deload stands.",

strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed Thursday
trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned 90-
```

```
minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. This week is the template for the whole season: you have said disciplined training rarely survives past four months, so the priority through the winter is repeatable, low-drama execution that carries you to the Atlas Mountain Race on 28 February and the 200 km brevet in April. The 30-minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority — cadence above 85 rpm from the first minute of every ride — is the efficiency that carries you through the mountain race's climbs and 200 km of April riding.",

```

```
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy minutes maintains the running-specific durability that supports your cycling base through the winter and costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic. With the season now built around the Atlas Mountain Race on 28 February and Paris-Brest-Paris in August, this kind of cheap, repeatable aerobic work is exactly what keeps a four-month training arc sustainable.",
    "optional": true,
    "optionalRationale": "The cost of skipping is genuinely small: 30 minutes of easy running builds running-specific durability that returns within days and adds no threshold fitness you would miss in the Atlas Mountain Race build. The session that matters this week is Monday's controlled threshold stimulus, and starting it with heavy legs from Saturday's hike is the more expensive mistake.",

9.9/12.5

MoonshotAI: Kimi K2 0905

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	78.4 s	$0.0257	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00658	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate returns clean JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and null bikeWorkout, and it follows the week plan's Gym Strength B structure with elevated knee-height pulls, two split-squat sets and a flat-back hinge cue. It reflects the athlete's feedback on the back, heart-rate recovery before sets, lat pulldown loads and the 90 to 120 second rest. Weaknesses include a warm-up that adds volume the 45-minute budget may not absorb, an unlisted band requirement, no RPE or stop conditions, and a rationale that leans somewhat on generic consequences of skipping. Season revision: The season is credibly re-shaped around Atlas on 28 February 2027, with named AMR build, recovery and PBP blocks that tile contiguously, and block 1 correctly starts on 2026-10-21 with no coachQuestion. However, the current block's weeks and focus are essentially unchanged from the prior plan, so Atlas preparation barely reaches the active block beyond a rationale sentence, and the seven-week base does not explicitly plan around the four-month discipline ceiling. The season rationale also introduces AMR and PBP distances of 1,150 km and 1,200 km that are not in the input. Today's session keeps its supplied content with a proper completion note, and the week has seven coherent sessions, but the outline days carry little concrete detail. Hard gates failed: block 1 is unchanged.

    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Your second gym session of the week introduces the safe hip-hinge progression your back needs. After a 5-minute general warm-up (light rowing, walking, or cycling), complete 2 rounds of: 10 bodyweight hip hinges (hands on hips, flat back, minimal knee bend), 10 walking lunges, and 10 band pull-aparts. Then the main work: Elevated rack pulls or trap-bar deadlifts from knee height, 3 sets of 8 reps at a light load (start with 40–50 kg or empty trap bar), resting 90–120 seconds between sets and letting your heart rate drop below 110 bpm before each set—focus on a flat-back hip hinge, pushing hips back first, not lifting with your lower back. Follow with bodyweight split squats, 2 sets of 8 reps per leg (rear foot elevated on a step if comfortable), resting 60–90 seconds between sets. Finish with: lat pulldown 2x10 at a moderate load (40–50 kg), Pallof press 2x10 per side, and a 30-second plank hold. Conclude with your 8-minute hip/spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength and hip-hinge pattern that protects your lower back on long climbs and allows a more aerodynamic cycling posture, directly addressing your sit-bone discomfort and back pain goals. The elevated pulls specifically retrain your hinge without the injury risk of floor deadlifts. Skipping this leaves your back vulnerable and delays the postural improvements that underpin your PBP and tour race ambitions."

meta/muse-spark-1.2

Meta: Muse Spark 1.2

9.9/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	22.0 s	$0.0685	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00680	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.1/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate keeps the correct date, planned status, 45-minute indoor gym workout, FTP of 220 W, TSS of 30 and null bikeWorkout, and returns only the requested today object. The exercise list is specific, with sets, reps, rest, load ranges, knee-height pulls instead of floor deadlifts, and split squats capped at two sets, which follows the week plan and the athlete's back history. Weaknesses: the rationale and optionalRationale overstate the link to saddle blisters and PBP durability, the 40-50 kg pull load is assumed without a clear note, and there are no explicit pain stop conditions or fallback for a missing trap bar. Season revision: The response names Atlas throughout the season, block 2 and block 1 rationale, keeps block 1 starting on 2026-10-21, returns contiguous blocks through 2027-08-22, and leaves tomorrow, nextWeek and nextBlock null as required. Block 1 itself is only lightly changed: its name, focus and seven week rows are essentially unchanged, and the main change is a rationale that adds Atlas and PBP context, so the block revision is thin. The Thursday-to-Saturday week is coherent, but the completed Wednesday row was merged with the run into one 47-minute session, altering a past record, and the today description was edited slightly despite being supplied. Some content is not grounded in the input, such as night-riding tolerance and self-supported bikepacking demands, and the outline days carry little concrete progression toward the Week 3 threshold stimulus. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session (45 min) + 8-min daily hip/spine mobility after. Warm-up 5 min easy on bike
or stair machine (HR <120). Then: 1) Elevated rack pull or trap-bar block pull from knee height - 3x8 at
light load 40-50kg, rest 90-120s between sets, let HR drop below 110 bpm, flat back, hips back, no floor
pull; 2) Bodyweight split squat - 2x10/leg, rest 90s, controlled depth; 3) Glute bridge - 3x12, rest 60s; 4)
Lat pulldown - 3x10 (30kg/40kg/50kg as tolerated); 5) Pallof press - 3x10/side, rest 60s; 6) Plank - 3x30s,
rest 60s. Keep goblet squat weight out of this session to let quads recover from Tuesday. Finish with
unrecorded 8-min mobility: couch stretch/low lunge, standing forward fold soft knees, 90/90 hip rotations,
deep squat hold, supine figure-4, cat-cow - ~90s each.",
    "rationale": "Today builds the safe hip-hinge pattern and unilateral leg stability you need for a pain-
free, more aerodynamic cycling position and to eliminate sit-bone overload on long rides. Using knee-height
elevated pulls instead of floor deadlifts protects your easily irritated lower back while still loading
glutes and hamstrings, and capping split squats at 2 bodyweight sets prevents quad overload after Tuesday's
3x12kg goblet squats. Kept at moderate intensity with full recoveries, it supports steady fat loss without
spiking evening hunger.",
    "optional": false,
    "optionalRationale": "Skipping this session loses the specific posterior-chain and core anti-rotation
adaptation that carries you through long climbs without back ache and lets you hold a lower handlebar
position without saddle blisters. It is the only hinge-focused stimulus this week - missing it delays the
safe progression to heavier pulls needed for PBP durability and your 5K/10K running resilience."
  }
}

  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, comfortably finish the 200 km brevet
series starting in April, and build toward Paris-Brest-Paris in August 2027 with durable aerobic endurance,
efficient cadence and strength for hilly terrain",
    "rationale": "The season runs 2026-10-21 to 2027-08-22 to cover Atlas, the spring brevets and PBP.
Because you have historically maintained disciplined progress for a maximum of 4 months, the plan is built
in 3-8 week blocks with a deload every 3rd-4th week, clear variation between cycling, skiing/running cross-
training and strength, and autonomy in easy sessions to sustain motivation. Block 1 rebuilds aerobic
consistency and cadence above 85 rpm after the high-load race week. Block 2 maintains cycling specificity
through winter while using skiing and easy running for durability. Block 3 peaks and tapers specifically for
the off-road, self-supported demands of Atlas on 28 February. Block 4 recovers from Atlas then rebuilds for
the April 200 km brevet, Block 5 sharpens brevet pacing, fueling 60-90 g/h and back-to-back durability, and
Blocks 6-8 build the very long-distance base, night-riding and specific endurance needed for PBP with a
final 2-week taper.",

openai/gpt-6.1-terra-pro

9.9/12.5

OpenAI: GPT-6.1 Terra Pro

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A	C	76.6 s	$0.1247	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00667	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is valid and matches the requested today shape, with the correct date, planned status, indoor gym workout, 45 minutes, moderate intensity, and 220 W FTP. The session follows the Friday Gym Strength B direction from the coach replies, including elevated pulls, two split squat sets, 90 to 120 second rests, and an 8-minute mobility finish. It omits the goblet squat work that the Week 1 block plan specifies, and gives no load guidance for lat pulldowns or pulls even though the athlete's recent loads are known. The rationale is reasonable but somewhat generic compared with the specific purpose stated in the optional rationale. Season revision: The season is rebuilt around the Atlas Mountain Race with contiguous blocks through August 2027, block 1 starts on 2026-10-21, tomorrow, nextWeek and nextBlock stay null, and today's trainer ride has power targets that correctly convert to 119, 135 and 115 W at 225 FTP. Weaknesses: the current block name and focus never mention Atlas, only the rationale does; the season end date of 2027-08-31 is an assumption; the four-month training ceiling is acknowledged in prose but not clearly engineered into the progression; and past sessions were rewritten (Wednesday run and rowing merged, Tuesday TSS changed) beyond what the revision required. The original planned run for today was replaced without a clear reason tied to the new goal.

anthropic/claude-opus-4.6

9.9/12.5

Anthropic: Claude Opus 4.6

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	D	101.9 s	$0.2885	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00693	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.5/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is valid, has only the today root key, and matches the required date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 220 W FTP and 30 TSS from the plan. The session is well sequenced with explicit sets, reps, rest, tempo and stop-and-regress cues for the elevated rack pull, which fits the coach's conservative hinge progression. Weaknesses: it adds a dumbbell Romanian deadlift and dead bugs that the week plan does not call for, despite this athlete's back sensitivity, and the Pallof press is described as same resistance as Tuesday, which is not supported by the Tuesday activity record. The rationale is specific to the back and hip goals but overstates the cost of skipping with an unsupported one-week delay claim. Season revision: The season is rebuilt around Atlas with a dedicated preparation block, taper and event block, post-race rebuild and brevet week, and the blocks tile cleanly with block 1 still starting 2026-10-21. Block 1 is genuinely revised (Week 3 threshold stimulus, Week 6 threshold session, adjusted loads) and names Atlas in its rationale, and tomorrow, nextWeek, nextBlock and bodyMetrics are correctly null or empty. Weaknesses: the season and block rationales use meta-language about reshaping and expanding the old plan, the season text adds unsupplied facts such as the race location in Morocco and a 55-65 percent FTP for 10-hour days, the Sunday session still reads as a full-day indoor run despite a reasonable outdoor-capable flag, and a coachQuestion is included even though Atlas was already worked into the plan.

{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Elevated Hinge & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B session focused on safe posterior-chain loading and single-leg stability,
followed by your 8-minute hip/spine mobility circuit.\n\n**Warm-up (5 min)**\n- 2 min brisk walk or light
bike\n- 1 min bodyweight hip hinges (hands on thighs, flat back)\n- 1 min bodyweight squats (slow tempo)\n-
1 min leg swings (10 each leg, front-to-back and side-to-side)\n\n**A1. Elevated Rack Pull or Trap-Bar
Deadlift from Knee Height**\n- 1 x 10 reps with empty bar or lightest trap bar (technique set — flat back,
brace core, drive through heels)\n- 3 x 10 reps at a light load you can control with a perfectly flat back
(start around 30–40 kg total; increase only if form is flawless)\n- Rest 90–120 seconds between sets; HR
should drop below 110 bpm before the next set\n- Cue: push the floor away rather than pulling the bar up;
keep shoulders packed and chest proud\n\n**A2. Bodyweight Split Squat (rear foot on floor)**\n- 2 x 10 reps
per leg\n- Rest 60–90 seconds between sets\n- Cue: keep torso upright, front knee tracking over toes, lower
until rear knee is just above the floor; if balance is an issue, hold a wall or rack\n\n**B1. Dumbbell
Romanian Deadlift (light)**\n- 3 x 10 reps with light dumbbells (8–12 kg each)\n- Focus on a slow eccentric
(3 seconds down), feeling the hamstring stretch; stop at mid-shin if hamstring tightness limits range\n-
Rest 60–90 seconds\n\n**B2. Cable or Band Pallof Press**\n- 3 x 10 reps per side (same resistance as
Tuesday)\n- Rest 60 seconds\n\n**C1. Side Plank**\n- 3 x 20 seconds per side (build toward 30 seconds over
coming weeks)\n- Rest 30–45 seconds between sides\n\n**C2. Dead Bug**\n- 3 x 8 reps per side (slow,
controlled, lower back pressed into floor)\n- Rest 45 seconds\n\n**Cool-down & Mobility (8 min)**\nYour
standard daily circuit: 90 seconds each of (1) couch stretch / low lunge with hips pushed forward, (2)
standing forward fold with soft knees gradually straightening, (3) 90/90 hip rotations on the floor, (4)
deep squat hold with heels down, (5) supine figure-4 glute stretch, (6) cat-cow with slow spinal
movement.\n\n**Pacing notes:** Take the full rest between every set. If the elevated rack pull causes any
lower-back discomfort, reduce the load or raise the pin/blocks higher. The goal is to groove a safe hip-
hinge pattern under light load, not to challenge maximal strength. Keep total session heart rate moderate —
brief peaks up to 130–140 bpm during working sets are fine, but recover below 110 bpm before the next set.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength and hip-hinge motor pattern that
directly addresses your lower-back vulnerability on long climbs and your inability to hold a more
aerodynamic cycling position — the exact adaptations you need to eliminate sit-bone blisters and back pain
on 200 km+ brevets and ultimately Paris-Brest-Paris. The split squats develop single-leg stability critical
for both cycling power transfer and your running progression toward the sub-23-minute 5K. The core anti-
rotation and dead-bug work reinforces the trunk stiffness that protects your spine during crouching,
carpentry, and sustained aero positions. Skipping this session delays your safe hinge progression by a full
week, leaving your back unprotected as training volume increases in Weeks 2–4 and pushing back the timeline
for loading good mornings and heavier squats that will ultimately support your cycling power and posture
goals."
  }
}
```

SEASON REVISION

9.2/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
72.1 s	**$0.1784**	**no**	**yes**	**200**	**stop**

Contract 1.2/1.5 · Fidelity 1.5/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.5/2

Judgment: The season is rebuilt around Atlas with a dedicated preparation block, taper and event block, post-race rebuild and brevet week, and the blocks tile cleanly with block 1 still starting 2026-10-21. RETURNED JSON

```
{
  "season": {
    "goal": "Build durable ultra-endurance fitness for the Atlas Mountain Race (February 28, 2027), then
maintain and extend that fitness through a randonneur brevet series starting with a 200 km in April 2027,
culminating in Paris-Brest-Paris in August 2027.",
    "rationale": "Your goals have expanded significantly: the Atlas Mountain Race in late February 2027 is
now the first A-event, followed by a 200 km brevet in April and Paris-Brest-Paris in August 2027. The Atlas
Mountain Race is an unsupported, multi-day ultra-distance event across mountainous terrain in Morocco,
demanding exceptional aerobic durability, climbing efficiency, self-sufficiency skills, sleep management,
```

```
and the ability to sustain moderate power output for many hours per day across multiple days. This reshapes
the season: the aerobic base block remains critical but must progress faster toward sustained multi-hour
efforts; the winter build must include longer weekend rides and threshold work to raise your ceiling; and a
specific Atlas preparation block must develop back-to-back long days, climbing cadence, fueling strategy,
and equipment familiarity before late February. After the Atlas Mountain Race, a recovery period transitions
into brevet-series preparation, maintaining the endurance base while sharpening pacing for the 200 km in
April. The season ends after the April brevet; Paris-Brest-Paris preparation will be planned in a subsequent
season. Given your stated pattern of maintaining disciplined training for a maximum of about four months,
the plan front-loads the most critical adaptations, builds in regular deload weeks to prevent burnout, and
keeps variety through cross-training (skiing, running, strength) to sustain motivation. Your current FTP of
225 W is the baseline; the priority is not raising FTP dramatically but building the durability to hold 55-
65% of FTP for 10+ hours per day across multiple days.",

z-ai/glm-5.3-flashx

Z.ai: GLM 5.3 FlashX

9.8/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	128.7 s	$0.0336	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00692	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean, uses the required today fields with valid enum values, and matches the planned 2026-10-30 moderate 45-minute gym session at the correct 220 W FTP estimate. The exercise selection is sensible for the athlete's back and hinge history, with rest guidance and an explicit load assumption for the untested rack pull. The weaknesses are a vague either-or row choice, the added row, dead bug and side plank beyond the planned split-squat and pull structure, and the unsupported claim that floor deadlifts aggravated the hinge, which the input does not state. The rationale is specific about what skipping costs, but the detail lacks RPE or rep-in-reserve guidance and clear stop conditions. Season revision: The season is credibly rebuilt around the Atlas Mountain Race on 28 February 2027, with contiguous blocks through the PBP taper, a four-month-aware build, a taper and a post-race reset, and the block 1 start kept at 2026-10-21. However, block 1 itself is only lightly changed: its name, focus and week structure are unchanged, and only its rationale mentions Atlas, so the block does not visibly reshape its later weeks for the Atlas build. The Wednesday session was also merged and re-scored in a way that alters a recorded past day, and the assumed 3-4 April brevet date and the Morocco reference are not from the input. Today's session is detailed and coherent with the week, with tomorrow, nextWeek and nextBlock correctly left null. Hard gates failed: block 1 is unchanged.

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "45-minute Gym Strength B at the gym (rain today, so indoors regardless). Warm-up: 5 min
easy bike or rower, then 10 cat-cow and 8 slow bodyweight squats. Main work, resting a full 90–120 s between
sets and letting heart rate drop below 110 bpm before starting each set: A) Knee-height rack or trap-bar
pulls — 3x8 with the lightest sensible load (empty bar or light dumbbells; I am assuming a conservative
starting weight since we have not tested this lift yet), braced and hinging with a flat back, 2-s squeeze at
the top; B) Bodyweight split squats — 2x8–10 per leg, holding a rack for balance if needed (stay at two sets
while your quads finish adapting); C) Seated cable row or single-arm dumbbell row — 3x10 at a controlled
moderate load; D) Dead bug — 2x10 per side, plus side plank — 2x30 s per side. Finish with 3–4 min of easy
stretching, stop the recording, then complete your daily 8-minute hip/spine mobility circuit. Purpose: this
is the second of your two weekly strength sessions, safely rebuilding the hip-hinge pattern that floor
deadlifts aggravated, adding single-leg strength for climbing, and continuing the core stability work that
protects your back on long rides.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain hinge strength and single-leg stability
that your Autumn Re-Entry block exists to create — the exact qualities that will keep your back pain-free on
long climbs and reduce sit-bone pressure toward the brevets and Paris-Brest-Paris. It is one of only two
strength stimuli this week, so skipping it delays your safe hinge progression by a full week and costs you
the loading dose the 4:1 structure is built around; with tomorrow's 2-hour hike and Sunday's ERG ride still
ahead, the modest quad load here will not compromise them."
  }

meta/muse-spark-open

9.8/12.5

Meta: Muse Spark Open

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	C	59.8 s	$0.1050	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00670	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.2/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The response keeps the planned Friday gym session with the correct date, planned status, moderate 45-minute workout type, indoor flags, null bikeWorkout and 220 W FTP, and it does not invent a completed activity. The exercise set is sensible for the athlete's hinge and back goals, with explicit sets, reps, rest, heart-rate gating and a mobility finish, though the loads are guessed without stating an assumption and the dumbbell chest press is not in the plan. The rationale ties the session to the back, sit-bone and brevet goals, but the lat pulldown load of 35-45 kg sits below the 50 kg the athlete completed recently, which weakens the grounding. Season revision: The output is valid, mentions Atlas in the season and in the Atlas block, keeps block 1 starting on 2026-10-21, tiles the season correctly through 2027-08-22, and leaves tomorrow, nextWeek and nextBlock null as required. Its main weakness is that block 1 is barely changed: the seven week entries are copied from the supplied plan and only the block rationale was reworded. The Atlas block ends on race day with no real taper, and the season runs roughly ten months with no reset despite the athlete's stated four-month limit. The current week and today's session are coherent and grounded in the logged activities, though the rationale mentions a 2-hour hike where the log shows 2 h 05 min and the night-riding emphasis is not in the input. Hard gates failed: block 1 is unchanged.

TODAY PLAN

{
  "season": {
    "goal": "Complete the Atlas Mountain Race starting 28 February 2027, comfortably finish a 200 km brevet in early April 2027, and finish Paris-Brest-Paris in August 2027 with durable aerobic endurance, efficient cadence, and sustainable training habits",
    "rationale": "Your season now targets three ultra-endurance milestones from your current 225 W FTP: the Atlas Mountain Race starting 28 February 2027, a comfortable 200 km brevet in early April, and Paris-Brest-Paris in August 2027. You have shown you can execute controlled easy riding and hiking under 140 bpm, but the 3-hour Zwift race at 187 bpm and the extra pole-vaulting load showed how quickly fatigue stacks, and you have noted you typically lose momentum after 3-4 months of disciplined training. This plan therefore builds your aerobic base and cadence above 85 rpm first, then uses winter skiing and easy running for variety to keep you engaged, adds Atlas-specific bikepacking durability with back-to-back long rides and fueling practice, gives you a short recovery before translating that fitness into steady brevet pacing, and finally extends long-ride durability and night-riding skills for PBP. Each block progresses only when you hold the HR ceiling and cadence target, with planned deloads and cross-training to protect freshness and adherence all the way to August.",

OpenAI: GPT-5.6 Terra

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A+	C	39.6 s	$0.1136	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00666	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean and matches the requested today shape, and the date, planned status, workout type, moderate intensity, 45-minute duration, indoor flags, 30 TSS and 220 W FTP all agree with the current plan. The session is well sequenced with explicit sets, reps, rest and a stop condition for back discomfort, and the rationale ties the hinge and core work to sit-bone pressure and back durability. Weaknesses: the week plan calls for holding goblet squats at three sets, and this session drops that squat pattern entirely, and several loads are left as vague terms like light load or controlled load with no progression guidance or RPE target. Season revision: The season is rebuilt around the Atlas Mountain Race with a named Atlas Build block ending 28 February 2027, PBP in August 2027 is preserved, the season blocks tile contiguously, block 1 starts on 2026-10-21, and tomorrow, nextWeek and nextBlock stay null, so the core structure is sound. Block 1 itself is barely changed: its name, focus and seven weeks are essentially the supplied ones, with only the block rationale reworded, so the Atlas adjustment does not reach the current block as the request asked. The Atlas block has no taper before the 28 February race, and the final block's three-week count does not match its 16-day span. The current week and today's session are coherent and grounded in the logged activities, with no invented metrics and bodyMetrics correctly empty.

```

```
    "description": "Complete this indoor gym session with controlled technique and 90–120 seconds of rest between working sets, waiting for your heart rate to fall below about 110 bpm before the next set. Start with 5 minutes of easy bike or treadmill walking, then perform: elevated knee-height rack pulls or trap-bar pulls, 3 x 8 with a light load and a neutral spine; bodyweight split squats, 2 x 8 per side; glute bridges, 3 x 12; lat pulldowns, 3 x 10 at a controlled load; Pallof press, 3 x 10 per side; and planks, 3 x 30 seconds. Finish with your 8-minute hip/spine mobility circuit. Stop any hinge set immediately if you feel back discomfort, and keep the rack-pull height at knee level rather than progressing toward floor pulls. This session builds the posterior-chain, single-leg, anti-rotation, and trunk endurance you need for a more sustainable cycling position, lower-back resilience on long climbs, and reduced pressure through your sit bones on future brevet rides.",
    "optional": false,
    "optionalRationale": "Skipping this session would leave a gap in the safe strength foundation that supports your hip mobility and lower-back durability for long-distance cycling. The controlled hinge and core work are particularly important for building the stable posture needed to progress toward 200 km brevets and Paris-Brest-Paris without recurring back fatigue."

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.3/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and 220 W FTP, and the gym session follows the plan's hinge-and-core direction with elevated pulls, split squats and Pallof work. The description is fairly specific, with RPE, rest guidance and a heart-rate cue drawn from the coach analysis, though the opening says 3 rounds while several exercises use different set counts, which creates some ambiguity. The rationale ties the session to the back, hinge and tomorrow's hike reasonably well but leans on a generic metabolic claim, and there is no fallback for equipment or pain. Season revision: The candidate names Atlas in the season goal and blocks, keeps block 1 starting on 2026-10-21, returns all eight keys with seven week sessions, and leaves tomorrow, nextWeek and nextBlock null as required. Its weaknesses are that the current block name, focus and rationale never mention Atlas, the Atlas race date falls mid-block inside a block that ends after it, and the final PBP taper block runs 23 days while labelled as three whole weeks. The block rationale also invents an early-October overload, and the season and week rationales contain meta wording about refreshing or replacing the plan. Past session TSS values and titles were rewritten without clear basis.

  "season": {
    "goal": "Finish the Atlas Mountain Race on 2027-02-28 and Paris-Brest-Paris in August 2027, with a comfortable 200 km brevet in early April as an intermediate milestone. You will arrive strong, aerobically durable, and fatigue-resilient after a structured progression that respects your four-month consistency window and emphasises efficient cadence, fueling practice and multi-day recovery.",
    "rationale": "The refreshed season extends through the August 2027 Paris-Brest-Paris and tiles eight logical blocks from today to 2027-08-31. The current block keeps its 2026-10-21 start and continues building a broad aerobic base with low-load strength—essential foundation for ultra-distance cycling. Winter then blends cycling specificity with skiing and running to maintain volume without monotony, followed by a sustained-power build that peaks for Atlas Mountain Race. A short taper carries freshness into the race, after which recovery and brevet-specific work lead into the April 200 km. A long PBP build follows, culminating in a taper and race-readiness block in August. Each block duration fits whole weeks, tiles without gaps or overlaps, and manages your known four-month adherence horizon by resetting focus before motivation traditionally drops.",

Particle AI: Particle-1

9.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	B	A+	94.6 s	$0.00659	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00653	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.1/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns only the required today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, null bikeWorkout and a TSS consistent with the plan. The gym session is well sequenced and uses the coach's earlier constraints: knee-height pulls instead of floor deadlifts, two split-squat sets, 90 to 120 seconds rest with heart rate below 110 bpm, and specific sets and reps. A weakness is that lat pulldown load of 40 to 45 kg sits below the 50 kg the athlete completed last session without explanation, and the optionalRationale is somewhat generic about back resilience rather than tied to the current block's load targets. Season revision: The season is clearly refreshed around the Atlas Mountain Race on 28 February 2027, block 1 starts on 2026-10-21, the blocks tile contiguously, and the Atlas-specific build, taper and post-race reset are sensibly ordered. However, the current block is barely changed: its name, focus, and week targets are essentially the old ones, with only the block rationale rewritten to mention Atlas, so the block revision is thin. The season misnames Paris-Brest-Paris as Paris-Brest-Proust in several places, a factual error against the supplied input, and the final block's weekCount of 6 does not match its 2027-07-26 to 2027-08-31 dates. The current week and today's session are coherent and well grounded in the logged activities, but today's session is nearly unchanged from the supplied one, and the coachQuestion about gravel bikes is a reasonable but unnecessary clarification given that Atlas is already built into the plan.

    "description": "Indoor gym session focused on rebuilding your hip hinge and posterior-chain strength
without loading your back or quads too aggressively. Warm-up 8 min: 5 min easy row or bike, then leg swings,
90/90 hip rotations, cat-cow, and 10 bodyweight squats. Main work: elevated knee-height trap-bar or rack
pulls 3 x 8 at RPE 6–7 with a flat back and braced core, resting 90–120 sec and letting heart rate fall
below 110 bpm before each set; bodyweight split squats 2 x 8 per leg, controlled and pain-free; glute
bridges 3 x 12; lat pulldown 3 x 10 at 40–45 kg; Pallof press 3 x 10 per side; dead bug 3 x 8 per side.
Finish with 5 min of couch stretch, figure-4 glute stretch, 90/90 rotations, and cat-cow. Keep the split
squats at two bodyweight sets and stop any set if quad burn becomes limiting. Complete your daily 8-minute
hip/spine mobility circuit later in the day.",
    "optional": false,
    "optionalRationale": "This session builds the hip-hinge strength, unilateral leg control, and core
stability that protect your lower back on long climbs and support a more comfortable cycling posture.
Skipping it would slow the posterior-chain and trunk resilience you need for the 200 km brevet and the
longer PBP build."

Judgment: The season is clearly refreshed around the Atlas Mountain Race on 28 February 2027, block 1 starts on 2026-10-21, the blocks tile contiguously, and the Atlas-specific build, taper and post-race reset are sensibly ordered. However, the current block is barely changed: its name, focus, and week targets are essentially the old ones, with only the block rationale rewritten to mention Atlas, so the block revision is thin. The season misnames Paris-Brest-Paris as Paris-Brest-Proust in several places, a factual error against the supplied input, and the final block's weekCount of 6 does not match its 2027-07-26 to 2027-08-31 dates. The current week and today's session are coherent and well grounded in the logged activities, but today's session is nearly unchanged from the supplied one, and the coachQuestion about gravel bikes is a reasonable but unnecessary clarification given that Atlas is already built into the plan.

  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 with durable, self-supported off-road
endurance, then complete a randonneur brevet series and Paris-Brest-Proust in August 2027.",
    "rationale": "The season is built as two roughly four-month macrocycles because disciplined training has
historically held for about four months at a time. The first runs from now to the Atlas Mountain Race on 28
February 2027: aerobic base and strength first, then winter endurance with skiing and easy running as cross-
training, then off-road-specific durability, load carrying and hike-a-bike, and a short taper into the race.
Morocco is the end of that cycle, not a waypoint. March is a genuine reset, and the second macrocycle
rebuilds from that platform toward the brevet series from April and Paris-Brest-Proust in August, where
volume, fuelling and night-riding practice replace off-road specificity. Splitting the year this way keeps
each build short enough to stay disciplined and gives you a real recovery point after Morocco instead of a
ten-month grind.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week delivered its aerobic purpose without the cadence-specific cycling: two strength
sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed Thursday trainer
ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned 90-minute
trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the week closes
with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and Sunday stays
deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-minute run
keeps running-specific durability alive at minimal cost, which matters more now that the Atlas Mountain Race
is the season's first target: you will spend hours on foot pushing and carrying the bike in Morocco, and
that resilience is built cheaply here.",

pass	$0.00654	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 1.8/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate enum values, 45 minutes, indoor flags, FTP of 220 W and TSS of 30, matching the current plan's Friday gym entry. The session draws well on the athlete's feedback, including the 12 kg goblet squats, elevated knee-height pulls, two split-squat sets, Pallof work and the 90 to 120 second rest with a heart-rate cue, but the prescription omits reps for most exercises even though the athlete explicitly asked for exact sets and reps. The rationale is grounded in the athlete's posture, sit-bone and back goals, though it lacks load-progression or stop-condition guidance. Season revision: The response names Atlas in the season goal, the new block 3 and the block 1 focus and rationale, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null, with the season blocks tiling cleanly to the season end. Its main design weakness is that the six-week Atlas build runs straight into the Atlas race on 28 February 2027 with no taper or recovery before the event, while the athlete's stated four-month training limit is not used to shape the later season, which runs on to August with only short breaks. The current week and today's session are coherent and respect the weather, the 140 bpm ceiling and the rules on past sessions, but the week itself never mentions Atlas and the optional flag on today's session is weakly justified.

Z.ai: GLM 5

9.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	112.2 s	$0.0440	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00655	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.7/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid and matches the requested today object, with status planned, workout type, moderate intensity, 45 minutes, indoor flags and the 220 W estimate all consistent with the plan's Friday gym session. The exercise selection follows the week constraints by using elevated rack or trap-bar pulls instead of floor deadlifts and capping split squats at two sets, and it includes rest periods, a heart rate recovery cue and a hinge technique cue. Weaknesses include a generic warm-up, an overhead press added without much justification given the athlete's back history, and no explicit load progression or stop condition for the pulls. Season revision: The response names Atlas in the season goal, block names, block rationale and week rationale, keeps block 1 starting on 2026-10-21, and tiles the season contiguously through 2027-08-20 with PBP still in August. Block 1 is barely changed, though: its name, focus, dates and week list are identical to the supplied plan and only the rationale text was reworded, so the required genuine change is weak. The season design has a clear flaw: the Atlas Race Preparation block ends on the race date (2027-02-28) with no taper before the event. The Wednesday session was merged into a combined TSS of 95 for 47 minutes of easy work, which looks inflated. Future days in the week are outlines as required, but the response provides little concrete detail beyond today's run. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Gym Strength B session focusing on safe hip-hinge progression and single-leg
stability:\n\nWarm-up (5-10 min): Light rowing or treadmill walk + dynamic stretches\n\nMain workout:\n1.
Elevated knee-height rack pulls or trap-bar pulls: 3 sets × 8-10 reps\n   - Start with empty bar or light
weight (20-30 kg)\n   - Focus on flat-back hip hinge mechanics, neutral spine throughout\n   - Rest 90-120
seconds between sets, let HR drop below 110 bpm\n\n2. Bodyweight split squats: 2 sets × 8-10 reps per leg\n
- Controlled descent, keep torso upright\n   - Rest 90 seconds between sets\n\n3. Seated cable rows: 3 sets
× 10-12 reps\n   - Moderate weight, full scapular retraction at end of each rep\n\n4. Dumbbell overhead
press: 3 sets × 8-10 reps\n   - Start light (6-8 kg per dumbbell)\n\n5. Side plank: 2 sets × 30 seconds per
side\n\nCool-down: Light stretching + 8-minute hip/spine mobility circuit\n\nKey focus: Take full rest
periods and prioritize perfect form on the elevated pulls to rebuild your hip hinge safely without straining
your lower back.",
    "optional": false,
    "optionalRationale": "This Gym Strength B session directly builds the posterior-chain strength and hip-
hinge mechanics you need to eliminate lower-back pain during long climbs and carpentry work. The elevated
rack pulls safely teach the hip hinge pattern without the injury risk of floor deadlifts, while split squats
develop the single-leg stability essential for efficient pedaling and running economy. Skipping this session
would delay your progression toward pain-free cycling posture and leave a significant gap in your balanced
strength foundation."

    "rationale": "This block establishes the aerobic foundation and strength base needed for both the Atlas
Mountain Race and the brevet series. Week 1's higher-than-planned load from the three-hour Zwift race and
additional activity supports a conservative Week 2 adjustment rather than immediate volume increase. Aerobic
work remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority—
cadence above 85 rpm from the first minute of every ride—carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race in
February.",

reflection/beam-1.0-501b-a23b

9.7/12.5

Reflection: Beam 1.0 501B A23B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A	B	86.0 s	$0.0530	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00613	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate returns the correct today object with the right date, planned status, workout type, moderate intensity, 45 minutes, indoor flag false and FTP 220 W, matching the plan's Friday Gym Strength B. The exercise list is specific with sets, reps, rest and a heart-rate ceiling, and it respects the plan's elevated pull and split squat limits, though it adds incline push-ups or bench press and dead bugs that the plan did not specify and the dumbbell bench option is not confirmed as available. The rationale ties the hinge and core work to back health and saddle pressure, but it does not state the week's target load or the cost of skipping in the detail the plan asked for, and the description omits explicit load progression guidance for the pulls and split squats. Season revision: The season is rebuilt well around Atlas on 28 February 2027, with a post-Atlas recovery block, a brevet block, a PBP build and taper, and the blocks tile contiguously through 2027-08-15 with block 1 still starting 2026-10-21. The weakness is that the current block is barely changed: its name and focus are unchanged, its rationale never names Atlas, and every week target load, including the Week 2 and Week 3 loads, is carried over from the old plan. Today's run and the completed-session summaries are grounded in the supplied activities, but the optional flag on today's run is debatable given the week's stated aerobic purpose.

elorian/glimpse

9.7/12.5

Elorian: Glimpse

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	137.1 s	$0.1266	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00683	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.6/3 · Rationale 1.4/2 · Grounding 1.3/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate returns clean JSON with only the today object, and the date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 30 TSS, 220 W FTP and null bikeWorkout all match the plan. The exercise selection follows the block (elevated pulls replacing floor deadlifts, two split-squat sets, glute bridges, Pallof press, plank) and the rest and heart-rate-recovery cue reflects the coach feedback. Weaknesses: the pull load of about 40 to 50 kg is an unstated assumption, there is no RPE or rep-in-reserve guidance, and the rationale slightly overstates that floor deadlifts injured the back, which the athlete did not claim. Season revision: The response names Atlas in the season goal, block 3 and the week rationale, keeps block 1 starting on 2026-10-21, tiles the season blocks correctly, and leaves tomorrow, nextWeek and nextBlock null, with a valid eight-key contract. Block 1's weeks are copied unchanged from the supplied plan and only its rationale is reworded, so the requirement to genuinely change block 1 is weakly met. The season rationale promises short 5-7 week blocks with a deload every fourth week, yet blocks 4 to 6 run 5, 12 and 9 weeks with no deloads, and the plan runs about ten months of continuous disciplined training despite the athlete's stated four-month limit. The Wednesday past sessions were merged and retitled, and the Morocco reference and the 29 August season end are assumptions not found in the input. Hard gates failed: block 1 is unchanged.

```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B (45 min, moderate). Warm-up: 5 min easy bike or brisk walk plus cat-cow
and hip circles. Main work: (1) Elevated knee-height rack/trap-bar pulls — 3 sets × 8 reps at light load
(~40–50 kg), flat-back hip hinge, 90–120 s rest between sets until heart rate drops below 110 bpm; (2)
Bodyweight split squats — 2 sets × 8–10 reps per leg, slow controlled tempo; (3) Glute bridges — 3 sets ×
12; (4) Pallof press — 3 sets × 10 per side; (5) Plank — 3 × 30 s. Finish with your daily 8-minute hip/spine
mobility circuit (couch stretch, standing forward fold, 90/90 hip rotations, deep squat hold, supine figure-
4, cat-cow). Keep every lift controlled and stop a set if the lower back rounds or flares; the elevated
pulls deliberately replace floor deadlifts while your hinge rebuilds.",
    "optional": false,
    "optionalRationale": "This is the week's second strength stimulus and the session where the safe hip
hinge is rebuilt: elevated knee-height pulls load the posterior chain without the floor deadlift position
that has injured your back, building the hinge and core stability that keep your back pain-free on long
climbs and crouching and support a more stable, less sit-bone-loaded cycling posture. The two split-squat
sets maintain single-leg strength without re-spiking the quad burn from Tuesday's goblet squats, and the
glute bridge, Pallof press and plank work add hip stability and anti-rotation core strength. Together with
Tuesday's session this forms the strength base for your fat-loss goal (muscle retention) and the hinge
progression Week 2 builds on. Skipping today would leave the hinge pattern unpracticed for another week,
slow your back and hip durability, and remove part of the metabolic support for steady fat loss."
  }

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 2026-02-28, then complete the 200 km randonneur brevet in
April, and finish Paris-Brest-Paris in August 2027, building durable aerobic endurance, efficient cadence
and supporting strength along the way.",
    "rationale": "The season now targets three events in sequence: the Atlas Mountain Race on 28 February
2027 as the first peak, the 200 km brevet in April as the next milestone, and Paris-Brest-Paris in August as
the finale. The shape stays aerobic-first because your recent training shows the base responds well to
controlled, low-fatigue work, while the three-hour race at 187 bpm average HR and the extra pole-vaulting
load show that uncontrolled intensity is the main risk to consistency. Because you have only been able to
sustain disciplined training for about four months, the plan is built in short 5-7 week blocks with a deload
every fourth week and moderate weekly loads, so consistency is protected over volume. The first block builds
the aerobic and strength foundation; the winter block adds cross-training durability with skiing and easy
running; the build block progresses sustained power, long riding and fueling into the Atlas race; a short
recovery-and-brevet block bridges to the April 200 km; the brevet-series block expands endurance through the
spring randonneur events; and the final block peaks long-duration endurance and tapers into PBP.
Assumptions: the 200 km brevet falls in early April and PBP in late August, so the season ends 2027-08-29.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block remains the aerobic and strength foundation for the Atlas Mountain Race on 28
February, the first target of the season. Week 1's realized load of roughly 587 TSS, including the three-
hour race, was far above the intended recovery, so Week 2 stays a conservative low-fatigue rebuild with
every aerobic session capped under 140 bpm and cadence above 85 rpm from the first minute. Your 'Feels good'
feedback for this week confirms the load is being absorbed, so Week 3 can introduce a single controlled
threshold stimulus while keeping volume moderate. Strength stays low-load and logged separately so leg load
is visible, and missed minutes are never made up. The 225 W FTP baseline is retained because no fresh
threshold test or sustained power evidence justifies a change, and the small projected gains in Weeks 5-7
reflect only consistent completed aerobic work. Keeping the progression deliberately slow also respects your
four-month discipline limit: the block is shaped to be repeatable rather than maximal.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus, the first
step of the build toward the Atlas Mountain Race on 28 February. Thirty easy minutes maintains the running-
specific durability that supports your cycling base through the winter and costs almost nothing in fatigue
the day after a 2 h 05 min hike. It stays indoors because rain and strong gusts are forecast all day, and
the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "Skipping this run costs little: the week's aerobic base is already secured by the
hike, the rowing-run double and both strength sessions, and the 25 TSS here is a small durability add-on
rather than a training stimulus. If your legs feel heavy from Saturday's hike or the day gets busy, resting
instead keeps you fresh for Week 3's threshold session, which is the session that actually moves the Atlas
Mountain Race preparation forward.",

OpenAI: GPT-5

9.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	B	D	117.3 s	$0.1586	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00620	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.3/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, 45-minute moderate gym session, indoor flags and estimated TSS and FTP all match the current week plan. The session is well built for this athlete: elevated pulls with a fallback, bodyweight split squats matching the two-set cap, a core circuit, and clear HR-based rest guidance tied to the back and saddle goals. The rationale is specific to the hinge and saddle pressure but does not tie the session to the fat-loss goal or the weekly load target, and the description omits the goblet squat progression that the block calls for. Season revision: The response names Atlas in the season goal and in the block 4 name, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and gives a detailed, mostly coherent current week with a realistic easy run for today. However, the current block's name, focus and rationale never mention Atlas, so the current block is only lightly changed from the supplied version, and the season's Atlas preparation is pushed into later blocks. The season has a fidelity gap: block 4 is labelled two weeks but spans only about ten days, and the season rationale opens with meta-commentary about updated targets. Past-day session titles and descriptions were also rewritten, and the sessions used for today's optional flag are reasonable but not strongly justified.

TODAY PLAN

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B — Elevated Hinge + Split Squat + Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Purpose: build a safe hip hinge, posterior-chain endurance, single-leg control, and core stability so your back stays happy on long climbs and your saddle pressure improves. Keep rests long enough that HR drops below 110 bpm between sets.\n\nWarm-up (8–10 min)\n- 5 min easy row, bike, or treadmill walk
```

```
(very easy).\n- Dynamic prep: 2 rounds of 6 dowel hip-hinges (flat back), 10 glute bridges, 6/side hip airplanes or supported single-leg RDL reaches.\n- Movement prep for pulls: 2 light ramp-up sets of 5 from blocks/knee height.\n\n1) Elevated Rack or Trap-Bar Pulls (knee height) — 3 x 5 reps @ RPE 6 (comfortable, perfect form)\n- Tempo 2-1-2 (up-hold-down). Rest 90–120 s, let HR <110 bpm before each set.\n- Brace ribs down, push the floor away, keep the bar close; no back rounding. If trap bar is used, stand tall with neutral spine.\n- If no rack/trap bar available: DB RDL from blocks or mid-shin, 3 x 8 @ RPE 6.\n\n2) Split Squats (bodyweight) — 2 x 8/side @ slow control\n- Tempo 3-1-2, front heel planted, tall torso. Hold a support if balance wobbles. Rest 60–90 s between sides.\n\n3) Core Stability Circuit — 2 rounds (6–7 min total)\n- Side plank 30 s/side (knees down if needed).\n- Dead bug 8/side with slow exhales, low back gently pressed to floor.\n- Rest ~30–45 s between exercises; keep breathing relaxed.\n\nCool-down (3–5 min)\n- Easy walk and two gentle stretches: hip flexor lunge and cat-cow. Then do your separate 8-minute daily hip/spine mobility later today.",
    "optional": false,
    "optionalRationale": "This session reinforces a safe hip hinge and single-leg stability that protect your lower back and improve comfort on long rides and hikes. Skipping it delays rebuilding posterior-chain strength and core control, increasing the risk of back niggles and saddle discomfort when endurance volume grows."
  }
}
```

SEASON REVISION

  "season": {
    "goal": "Build the aerobic durability, efficiency and strength to complete the Atlas Mountain Race on 2027-02-28, comfortably finish a 200 km brevet in early April 2027, and maintain momentum toward Paris-Brest-Paris in August 2027.",
    "rationale": "Your updated targets add the Atlas Mountain Race ahead of the April 200 km brevet. The season now prioritises sustainable consistency with frequent deloads and a dedicated taper into 2027-02-28, followed by a recovery and a short rebuild toward the April brevet. Because you typically maintain disciplined training for about four months, the plan uses shorter 3–5 week cycles, clear recovery weeks, and a full reset after Atlas so you can stay engaged and progressing. Winter includes skiing and easy running to support aerobic capacity without excessive concurrent load, while cycling keeps the specificity: efficient cadence, steady endurance, back-to-back long rides, climbing work, and fueling/logistics practice. A brief taper before Atlas preserves freshness; a controlled rebuild sets you up for the April 200 km without burnout.",

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, status, workout type, moderate intensity, 45-minute duration, indoor flags and 220 W FTP, and the session is a sensible second gym day with sets, reps, rest and a stop condition for back pain. However, the current week plan calls for three steady goblet squat sets, and the candidate drops goblet squats entirely, which weakens fidelity to the block progression. The rationale is reasonable but generic and does not tie the session to the fat-loss goal or the week's load target, and the description gives little load progression guidance. Season revision: The response names Atlas in the season goal, several block names and rationales, and keeps block 1 starting on 2026-10-21 with a changed focus and week set, and the blocks tile contiguously through the new season end. Weaknesses include the final block being labelled four weeks while spanning only about three and a third weeks, an extended season end date that is only loosely supported, and thin detail for the Atlas-specific build blocks, which contain no sustained-power progression. Today's run is sensibly easy and indoors in the rain, with a clear fallback, but the week's future days are not outlined and the rationales read somewhat generically in places.

AionLabs: Aion 3.5

9.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	D	D	502.8 s	$0.2809	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00663	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.7/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is clean, with the correct date, planned status, moderate workout type, 45 minutes, indoor flags, and the 220 W FTP. The session matches the planned Gym Strength B and follows the coach replies, including the 90 to 120 second rest, the sub-110 bpm recovery goal, and the lat pulldown progression from 40 to 50 kg. Weaknesses: the rack or trap-bar pull load is described only as light-to-moderate with no RPE or rep-in-reserve guidance, and there is no explicit stop condition for lower-back symptoms despite the athlete's back history. The rationale is specific and states what is lost by skipping, though it is somewhat long. Season revision: The response names Atlas throughout the season goal, block focus and rationale, keeps block 1 starting on 2026-10-21, tiles the five later blocks without gaps through 2027-04-04, and correctly leaves tomorrow, nextWeek, nextBlock and bodyMetrics empty or null. Its main weakness is design: the AMR Peak Build runs straight into the race on 28 February with no real pre-race taper, and block 1 is changed only in wording, with its weeks essentially unchanged from the supplied plan. The current week and today's session are coherent and grounded in the logged activities, though the past-session titles were altered and today is marked optional with a fairly thin justification.

TODAY PLAN

10.4/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
31.4 s	$0.0547	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.4/2

Judgment: The JSON is clean, with the correct date, planned status, moderate workout type, 45 minutes, indoor flags, and the 220 W FTP. The session matches the planned Gym Strength B and follows the coach replies, including the 90 to 120 second rest, the sub-110 bpm recovery goal, and the lat pulldown progression from 40 to 50 kg. Weaknesses: the rack or trap-bar pull load is described only as light-to-moderate with no RPE or rep-in-reserve guidance, and there is no explicit stop condition for lower-back symptoms despite the athlete's back history. The rationale is specific and states what is lost by skipping, though it is somewhat long.

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Safe Hinge & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B (45 min). Warm up 5–8 min easy bike or treadmill walk plus cat-cow and
hip openers. 1) Elevated knee-height rack or trap-bar pulls: 3x8 at a light-to-moderate load, pushing hips
```

```
back with a flat back — take the full 90–120 s rest between sets so your heart rate drops below 110 bpm
before each pull. 2) Bodyweight split squats: 2x10 per leg, slow and controlled, holding support if needed
for balance. 3) Lat pulldown: 3x10, starting at 40 kg and moving to 50 kg only if all reps feel crisp. 4)
Pallof press: 3x10 per side with a pause at full extension. 5) Plank: 3x30 s. Finish with your daily
unrecorded 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session is where you safely rebuild the hip-hinge pattern through the
elevated pulls — the foundation that will protect your easily-injured lower back, let you add load in later
weeks, and eventually support a more aerodynamic, pain-free position on long climbs toward the April 200 km
brevet and PBP 2027. The split squats, lat pulldowns, and core work add the second weekly strength stimulus
that drives fat loss and posture correction. Skipping it stalls the hinge progression at its most delicate
stage and removes one of only two gym sessions in your week, directly slowing the back durability and body-
composition progress this block is built around."
  }
}
```

{
  "season": {
    "goal": "Complete the Atlas Mountain Race starting February 28, 2027 with durable ultra-endurance,
efficient sustained climbing, and self-sufficient multi-day pacing, then recover and finish a 200 km brevet
in early April 2027 as the first step toward Paris-Brest-Paris in August 2027.",
    "rationale": "The Atlas Mountain Race on February 28, 2027 is now your primary goal, and the roughly
four months from today to race day align exactly with the disciplined-training window you have historically
been able to sustain. The plan is therefore built as one focused four-month push with clear block
milestones, deliberate variety through skiing and running in the winter, and a scheduled deload in Week 4 to
give you a mental and physical break before the heavier build. The aerobic base you are establishing now is
the single most important quality for a self-supported multi-day event: it determines how much power you can
hold hour after hour without unraveling. The winter block uses your skiing to build climbing durability
while maintaining cycling specificity, the January-February block peaks you with back-to-back long days and
sustained climbing power, and a short taper delivers you fresh to the start line. After the race, a recovery
block transitions you toward the April 200 km brevet, which serves as both a concrete post-AMR goal and the
first qualification step toward Paris-Brest-Paris in August 2027.",

    "focus": "Build aerobic durability, efficient cadence above 85 rpm, and low-load strength without
stacking fatigue, establishing the endurance foundation the Atlas Mountain Race demands.",
    "rationale": "This block builds the aerobic engine that determines whether you can ride for multiple
consecutive days in the Atlas Mountains in February. Every session is capped below 140 bpm because the
ability to hold a low-effort pace for 10-15 hours a day is the core requirement of ultra-endurance
bikepacking, not raw threshold power. Week 1 delivered roughly 587 TSS due to the unplanned Zwift race and
additional strength activity, so Week 2 stays conservative to absorb that load before Week 3 introduces a
single controlled threshold stimulus. The Week 4 deload gives you a scheduled mental and physical break at
the point where your historical training discipline typically begins to waver, and Weeks 5-7 then rebuild to
a peak aerobic-base load that sets up the winter climbing block. Cadence above 85 rpm from the first minute
of every ride is non-negotiable because efficient pedalling at low intensity is what preserves your legs
across a multi-day event. Strength work stays light and fully logged so it supports tendon and connective-
tissue durability without adding leg fatigue that would compromise the aerobic sessions.",

    ]
  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose with every session respecting the 140 bpm
ceiling: two strength sessions, a Wednesday double of 15 minutes rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday that substituted for the planned 90-minute ride.
Fatigue is low and the week closes with a short controlled run rather than a make-up ride, because arriving
fresh at Week 3's first controlled threshold stimulus matters more than recovering missed minutes. The 30-
minute run keeps running-specific durability alive at minimal cost, and the cadence-above-85-rpm priority
carries into next week because repeatable efficiency at low intensity is the foundation for holding a steady
pace across multiple days in the Atlas Mountains in February.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter at
almost no fatigue cost the day after a 2 h 05 min hike. For the Atlas Mountain Race, your body's ability to
handle sustained low-effort work across long days is the core quality, and this run reinforces that
adaptation while keeping you fresh. It stays indoors because rain and strong gusts are forecast all day, and
the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "This session builds the running-specific aerobic durability that supports your
overall endurance base for the Atlas Mountain Race. While the AMR is a cycling event, your general capacity
to absorb low-intensity effort for hours contributes to the multi-day durability you will need. Skipping it
today costs very little: you already completed a solid aerobic week including a 2-hour hike yesterday, and
the primary adaptation this run maintains will be re-stimulated in next week's sessions. If you are tired or
short on time, resting today and arriving fresh for Week 3's threshold introduction is an acceptable
trade.",

mistralai/mistral-medium-3

9.6/12.5

Mistral: Mistral Medium 3

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	A+	23.9 s	$0.00981	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00678	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON matches the required shape, the status is correctly planned since nothing is recorded for today, and the session stays a 45-minute moderate indoor gym workout with bikeWorkout null and FTP 220 W. The exercise selection fits the athlete's back and hip-hinge rehab goals and the Gym Strength B focus, with clear sets, reps, tempo, and rest guidance that respects the coach's heart-rate recovery cue. Weaknesses include the unexplained 40-50 kg rack-pull and 30-40 kg cable-row loads without a stated assumption or progression rule, no RPE or stop condition for back pain, and a rationale that calls the session non-negotiable without tying it to the week's specific load target. Season revision: The output names Atlas in the season, block 3 and rationale, keeps block 1 starting on 2026-10-21, returns null for tomorrow, nextWeek and nextBlock, and leaves bodyMetrics empty, so the mechanical checks pass. The block 1 change is minimal: the weeks are essentially unchanged and the focus only gains a heart-rate and cadence phrase, and the Atlas build is a six-week label with no weekly detail or explicit Atlas taper, since the block ends on race day. The season extends to August without scheduling the four-month reset the athlete said they need, and the rationales include meta-commentary about aligning or replacing the old plan. The candidate also silently changed stored past values, such as rowing TSS from 70 to 10 and the hike duration from 133 to 125 minutes, without basis.

    "description": "Complete the following circuit with 90–120 seconds rest between sets to allow heart rate to drop below 110 bpm: (1) Elevated knee-height rack pulls: 3 sets x 8 reps at 40–50 kg (focus on flat-back hip hinge, controlled eccentric). (2) Bodyweight split squats: 2 sets x 8 reps per leg (slow tempo, keep torso upright). (3) Seated cable row: 3 sets x 12 reps at 30–40 kg (squeeze shoulder blades at peak contraction). (4) Plank with shoulder taps: 3 sets x 10 taps per side (maintain neutral spine). (5) Bird-dog: 3 sets x 10 reps per side (slow, controlled movement). Finish with your 8-minute hip/spine mobility circuit (couch stretch, forward fold, 90/90 rotations, deep squat hold, figure-4 stretch, cat-cow). This session builds posterior-chain resilience and core stability to address your back pain and saddle discomfort while keeping intensity moderate to avoid evening hunger spikes.",
    "optional": false,
    "optionalRationale": "Skipping this session would delay the critical adaptation of rebuilding safe hip-hinge mechanics and core stability, which are foundational for eliminating back pain on long rides and climbs. The moderate intensity and controlled rest periods are designed to fit your fat-loss goals without triggering excessive appetite, making this a non-negotiable step toward your season objectives."

SEASON REVISION

8.7/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
18.7 s	**$0.00821**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.3/2

Judgment: The output names Atlas in the season, block 3 and rationale, keeps block 1 starting on 2026-10-21, returns null for tomorrow, nextWeek and nextBlock, and leaves bodyMetrics empty, so the mechanical checks pass. The block 1 change is minimal: the weeks are essentially unchanged and the focus only gains a heart-rate and cadence phrase, and the Atlas build is a six-week label with no weekly detail or explicit Atlas taper, since the block ends on race day. The season extends to August without scheduling the four-month reset the athlete said they need, and the rationales include meta-commentary about aligning or replacing the old plan. The candidate also silently changed stored past values, such as rowing TSS from 70 to 10 and the hike duration from 133 to 125 minutes, without basis.

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027 with durable aerobic endurance and efficient climbing, then finish a 200 km brevet in April 2027 as the first step toward Paris-Brest-Paris in August 2027, while managing training consistency within a 4-month sustainable window.",
    "rationale": "Your updated goal adds the Atlas Mountain Race as the primary early-season target, followed by the 200 km brevet in April and Paris-Brest-Paris in August. The season must therefore peak for a demanding ultra-endurance mountain event in late February, maintain fitness through April’s brevet, and then rebuild for PBP. The 4-month consistency limit means the plan must prioritize sustainable progression, avoid excessive load stacking, and include deliberate deloads to prevent burnout. The aerobic base block remains the foundation, but the winter block now emphasizes mountain-specific endurance and climbing efficiency, while the spring block transitions to brevet-specific pacing and fueling. The taper for Atlas Mountain Race will be shorter and more focused on fatigue management than a traditional peak.",

HARD GATES	JUDGE COST	JUDGED
pass	$0.00686	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 1.8/3 · Rationale 0.3/2 · Grounding 1.7/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON contract, date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, null bikeWorkout, 220 W FTP and 30 TSS all match the current plan. The description is concrete, with exercises, sets, reps, rest, heart-rate gating, stop conditions and an explicit equipment assumption, and it reflects the athlete's lower-back and hinge constraints. However, optionalRationale is left empty for a non-optional workout, so the required explanation of the session's adaptation purpose and the cost of skipping it is missing. Season revision: The season is restructured well: it names Atlas, keeps the 2026-10-21 start, tiles every block through 2027-08-31 with no gaps or overlaps, and adds a four-month-aware reset before the Atlas race and another before the spring build. Block 1 changes only in its name focus and rationale, with the weeks and targetLoad text left as supplied, so the Atlas preparation is not visible in the block's own week structure. The Wednesday session also merges a separate 32-minute run into the rowing entry, which blurs the recorded activity, and the Sunday run is marked optional without a strong reason to skip it.

google/gemini-3.7-flash

9.6/12.5

Google: Gemini 3.7 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	B	40.3 s	$0.0491	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00655	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.6/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate correctly returns only the today object with status planned, a moderate 45-minute gym workout, outdoor false, canBeOutdoor false, a null bikeWorkout and the 220 W FTP, all matching the current plan and the absence of any recorded activity for 2026-10-30. The strength circuit follows the coach replies (knee-height rack pulls, two bodyweight split squat sets, rest until HR drops below 110, hip-hinge cues), though the 8-minute mobility routine as written with six 90-second holds runs to about 9 minutes and the timing does not quite add up to 45 minutes. The rationale ties the session to lower-back protection and cycling posture for brevet riding, but the closing sentences lean slightly generic, and load progression and fallback options for missing equipment are thin. Season revision: The season is cleanly re-tiled from 2026-10-21 through 2027-08-22 with contiguous blocks that name Atlas, keep the April 200 km brevet and Paris-Brest-Paris, and block 1 starts on the required date with the correct JSON shape. However, block 1 itself is barely changed: its name, focus and most weeks are carried over, and Atlas is only alluded to as AMR in its rationale, so the current block does not visibly prepare for Atlas. The current week also silently merges the Wednesday rowing and run into one session and alters the Saturday hike duration, and today's rationale and optional text were rewritten rather than kept as supplied. Nothing in the week is invented, and bodyMetrics is correctly empty.

TODAY PLAN

10.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
11.9 s	$0.0178	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.5/3 · Rationale 1.7/2 · Grounding 1.7/2 · Detail 1.5/2

Judgment: The candidate correctly returns only the today object with status planned, a moderate 45-minute gym workout, outdoor false, canBeOutdoor false, a null bikeWorkout and the 220 W FTP, all matching the current plan and the absence of any recorded activity for 2026-10-30. The strength circuit follows the coach replies (knee-height rack pulls, two bodyweight split squat sets, rest until HR drops below 110, hip-hinge cues), though the 8-minute mobility routine as written with six 90-second holds runs to about 9 minutes and the timing does not quite add up to 45 minutes. The rationale ties the session to lower-back protection and cycling posture for brevet riding, but the closing sentences lean slightly generic, and load progression and fallback options for missing equipment are thin.

```

```
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Head to the gym for Strength Session B focusing on safe posterior chain hinge mechanics, single-leg stability, upper-body horizontal pulling, and core anti-rotation, followed by your daily mobility circuit.\n\nWarm-up (5 min):\n- 3–5 min easy warm-up on the treadmill or Ski-ERG at a conversational pace\n- Dynamic prep: 10 bodyweight good mornings (hands on hips, soft knees), 10 bodyweight squats, 10 cat-cows\n\nMain Strength Circuit (30–32 min, rest 90–120 seconds between sets until HR drops below 110 bpm):\n1. Elevated Knee-Height Rack Pulls (or elevated Trap-Bar Pulls): 1 warm-up set with empty bar x 8 reps, then 3 sets x 8 reps with light, controlled weight (focus strictly on a neutral spine, pushing hips back, and engaging glutes/lats—do not pull from the floor).\n2. Bodyweight Split Squats: 2 sets x 8 reps per leg (slow 3-second descent, upright torso, keeping load off recovering quads).\n3. Dumbbell Single-Arm Row (supported on bench): 3 sets x 10 reps per side (moderate weight, flat back, pulling elbow toward hip).\n4. Half-Kneeling Cable or Band Pallof Press: 3 sets x 10 reps per side (hold each press for a 2-second pause at full extension to lock in core anti-rotation).\n5. Side Plank Hold: 3 sets x 20–30 seconds per side.\n\nCool-down Mobility Circuit (8 min, hold each stretch for 90 seconds):\n1. Couch stretch or low lunge (hips pushed forward, glute squeezed)\n2. Standing forward fold with soft knees, gradually letting spine hang\n3. 90/90 seated hip rotations on the floor\n4. Deep squat hold with heels down (hold a rack or post for support)\n5. Supine figure-4 glute stretch\n6. Cat-cow spinal waves with slow, coordinated breathing.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength, single-leg pelvic stability, and core anti-rotation necessary to protect your lower back and maintain a pain-free, aerodynamic cycling posture for ultra-distance brevet riding and Paris-Brest-Paris. Skipping it compromises your progressive adaptation to hip-hinging under load, leaving your lumbar spine vulnerable to fatigue and ache on long climbs and weekend endurance sessions."
  }

anthropic/claude-haiku-4.5

9.6/12.5

Anthropic: Claude Haiku 4.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	B	27.7 s	$0.0523	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00672	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.3/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and FTP-consistent values, and matches the Friday gym session outlined in the week plan. The exercise prescription is specific and safety-conscious, with elevated pulls, split squats, Pallof presses and planks, sets and reps, and the coach's 90 to 120 second rest and sub-110 bpm recovery cues carried over. Weaknesses: the 15 to 20 kg starting load is an assumption without a stated basis, there is no stop condition or pain fallback, and the goblet squat progression the week plan emphasized is absent without explanation. Season revision: The season clearly works Atlas in as the February 2027 target with a dedicated preparation block, and the blocks tile through the season end with block 1 correctly starting on 2026-10-21. However, the current block name, focus and rationale never name Atlas, and the season has no real taper before the race since the race date falls on the first day of the post-race block. The season and block rationales are written as commentary on the change (expands the season, remains unchanged) rather than the plan as it stands, and the week's Friday is called off even though a completed strength session is logged for it. Past rest-day status is set to completed rather than rest, and the Week 2 Wednesday session was merged and renamed, which rewrites a completed record.

    "bikeWorkout": null,
```

```
    "description": "Conservative gym strength session focusing on safe elevated hip-hinge mechanics and core
anti-rotation. Warm up with 5 minutes of light movement and mobility. Perform 3 sets of 8–10 knee-height
trap-bar or rack pulls (start light, ~15–20 kg, focusing on a flat back and controlled hip hinge), 2 sets of
8 bodyweight split squats per leg (controlled descent, 90–120 seconds rest between sets), 3 sets of 10
Pallof presses per side (anti-rotation core work), and 3 sets of 30-second planks. Rest 90–120 seconds
between all sets so your heart rate drops below 110 bpm before each lift. Finish with 2–3 minutes of gentle
stretching. Total elapsed time ~45 minutes. Follow with your unrecorded 8-minute evening hip and spine
mobility circuit (couch stretch, forward fold, 90/90 hip rotations, deep squat hold, figure-4 glute stretch,
cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the safe, pain-free hip-hinge mechanics and posterior-chain
resilience your lower back needs for long cycling and climbing. The elevated trap-bar or rack pulls protect
your spine while retraining your glutes and hamstrings to stabilize your pelvis, directly addressing the
sit-bone pressure and lower-back ache you experience on long rides. Skipping this session delays your
ability to adopt a more aerodynamic, forward-folded cycling posture without pain, and leaves your core
vulnerable to fatigue during the 200 km brevet series and Paris-Brest-Paris. The two bodyweight split-squat
sets keep your quads fresh while reinforcing single-leg stability for climbing and pedaling efficiency."

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, then build toward Paris-Brest-Paris in
August 2027, with a 200 km brevet in April as a stepping stone. Maintain disciplined training for the full
6-month cycle by building aerobic durability, efficient cadence, climbing strength, and pacing discipline.",
    "rationale": "Your new goal expands the season to include the Atlas Mountain Race as the primary
February target, followed by Paris-Brest-Paris in August. The 200 km brevet in April becomes a mid-season
checkpoint rather than the final goal. This requires a longer, more structured progression: a solid aerobic
base through December, a winter build with climbing-specific work and threshold power, a sustained-power
phase through January and early February to prepare for the Atlas race, then a brief recovery and rebuild
for the April brevet, and finally a long endurance-specific block for Paris-Brest-Paris. Your note that
disciplined training has lasted a maximum of 4 months means we must build in strategic deloads, variety
through skiing and running, and clear milestone events to maintain motivation. The season runs from 21
October 2026 through 31 August 2027 to give you a full 10.5-month cycle with built-in recovery and
progression.",

    "rationale": "The block remains 7 weeks (21 October to 6 December) and emphasizes aerobic consistency,
cadence discipline, and low-load strength before introducing threshold work. Week 1 (19–25 October)
delivered approximately 587 TSS including an unplanned three-hour race and pole-vaulting session, well above
the intended recovery load, so Week 2 (26 October–1 November) is deliberately conservative: approximately
180–220 TSS with strict heart-rate and cadence control, no make-up sessions, and Friday off. Week 3
introduces one controlled threshold stimulus only if Week 2 shows stable aerobic execution. Week 4 is a
planned deload. Weeks 5–7 rebuild volume progressively toward 6–7.5 hours per week while maintaining cadence
above 85 rpm from the first minute of every ride and keeping strength work logged separately to avoid
stacking leg load. The 225 W FTP baseline is retained because no fresh threshold test or sustained power
evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "This week closes with today's easy run and delivers its aerobic purpose without the
cadence-specific cycling that was originally planned. Tuesday and Friday strength sessions were completed as
moderate-effort work; Wednesday combined 15 minutes of rowing plus a 32-minute easy run; Thursday's planned
trainer ride was missed; Saturday's 2 h 05 min hike at 114 bpm average substituted for the planned 90-minute
trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low. Missed minutes are
not recovered, and today's 30-minute easy run keeps running-specific durability alive at minimal cost before
Week 3's first controlled threshold stimulus. The week's remaining priority—cadence above 85 rpm from the
first minute of every ride—carries into next week, because repeatable efficiency at low intensity is what
carries you through 200 km in April and 1200 km in August.",

meta/muse-spark-1.3

9.6/12.5

Meta: Muse Spark 1.3

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	B	40.2 s	$0.0715	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00638	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.5/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, workout/moderate type and 45-minute duration matching the week plan, and it stays out of the weekend and rest-day logic. The session sensibly reuses the prescribed hinge, split squat, pulldown, Pallof and mobility work while respecting the heart-rate and back-safety constraints from the coach notes, though it lightly restructures the planned Gym Strength B and introduces a dead-bug and an unsupported 8-minute mobility circuit reference. The rationale ties the session to the back and hip goals and fat loss, but it does not quantify the load target or explicitly note the lost aerobic stimulus, and the description lacks explicit load progression guidance for the pulldown and rack pull. Season revision: The response is valid JSON with the eight required keys, tiles the season cleanly from 2026-10-21 through 2027-08-22, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek, nextBlock and bodyMetrics correctly null or empty, and names Atlas in the season goal and block 1 rationale. However, block 1 is almost unchanged from the supplied version (same weeks, targetLoads and focus, with only a few FTP values and rationale text altered), and Atlas appears only as a passing phrase in the week and today rationales rather than as concrete preparation. The season also ignores the athlete's stated four-month ceiling for disciplined training, running continuously from October to August, and the Atlas block ends on race day with no real taper before it. Today's session and the week's outline are sensible and grounded in the supplied data, but the detail on Atlas-specific work is thin.

TODAY PLAN

10.7/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "You build the back-safe hinge and single-leg stability you need for a pain-free cycling
position and steady fat loss. Warm up 5 min easy on bike or rower, then do: 1) Elevated rack pull or trap-
bar pull from knee-height blocks 3x8 light, flat back, hips back, rest 120 sec until your HR is below 110
bpm, 2) Bodyweight split squat 2x8/leg, torso tall, rest 90-120 sec, 3) Lat pulldown 3x10 at 30-40-45 kg,
rest 90 sec, 4) Pallof press 2x10/side, 5) Dead-bug 2x8/side with slow breathing. Keep all sets easy-
moderate, stop a set if your lower back rounds or aches, and do not add floor deadlifts, good mornings or
heavy squats. Finish with your unrecorded 8-minute hip/spine circuit: couch stretch, standing forward fold
with soft knees, 90/90 hip rotations, deep squat hold, supine figure-4, cat-cow, ~90 sec each.",
    "optional": false,
    "optionalRationale": "This session builds the elevated hip-hinge strength, glute activation and anti-
rotation core stability that lets you ride lower without sit-bone overload and back ache on long climbs and
carries you toward your 15% fat and Paris-Brest-Paris durability goal. If you skip it you lose this week's
only safe hinge stimulus and your back and hips stay fragile for Saturday's hike and Sunday's ride."
  }

mistralai/mistral-medium-3-5

Mistral: Mistral Medium 3.5

9.6/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	B	23.2 s	$0.0743	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00638	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid with the exact today shape, the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and FTP 220 W, matching the current plan's Friday Gym Strength B. The session follows the plan's elevated rack pulls and two split-squat sets and gives rest and heart-rate guidance, but it lacks a 12 kg goblet squat or explicit load progression and the rest-between-sets cue is partly generic. The description is concise and grounded in the athlete's back and hip issues, though the rationale does not explicitly mention the Week 1 fat-loss and evening-hunger angle that the plan emphasises. Season revision: The response names Atlas in the season goal, the season rationale, the block 1 rationale and the new Atlas Mountain Race Preparation block, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null with the correct top-level keys. Block 1 is only weakly changed: its name, focus, dates and all seven week rows are identical to the supplied plan, and only the rationale was rewritten, so the Atlas-driven revision is thin in the detailed block. The season also runs about ten months of continuous plan past the athlete's stated four-month sustainable window with only a brief reference to deloads, and the final PBP taper block spans 51 days while labelled as seven weeks. Today's session is handled properly with an unchanged planned description and a coherent week, but the rowing session's TSS was raised to 70 without support from the input.

TODAY PLAN

inclusionAI: Ling 3.0 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	**B**	**A+**	**160.9 s**	**$0.00394**	**yes**

HARD GATES	JUDGE COST	JUDGED
pass	**$0.00661**	**anthropic/claude-haiku-5.5**

Mentions Atlas **pass**	Block 1 changed **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.3/2 · Design 1.8/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean and matches the requested today shape, with the correct date, planned status, moderate 45-minute indoor gym workout, 220 W FTP, and 30 TSS consistent with the plan. The session is well built: rack pulls, 12 kg goblet squats, two split-squat sets, bridges, Pallof presses and planks follow the week's progression and the athlete's exercise-specific feedback, with sensible rest periods and cues. Weaknesses are a lack of load progression rules, pain stop conditions or fallbacks, and a rationale that is solid but leans somewhat on generic benefit wording. Season revision: The season is genuinely re-planned around Atlas on 28 February 2027, with PBP and the April brevet kept, block 1 still starts on 2026-10-21, and the next week, next block and tomorrow are correctly null. Block 1 is only lightly changed: its weeks are carried over, and the block rationale opens by saying the name, focus and structure remain unchanged, which is meta-commentary about the revision. The week rationale claims a total of about 180-220 TSS while the listed sessions sum to roughly 260, and the season ends on 23 August 2027, which may cut off PBP. Today's session is kept as supplied, but it is labelled optional without a strong case, and the response adds coachQuestion and modelsRemarks beyond the eight requested top-level keys.

    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B (45 min): Warm-up 5 min (light cardio and dynamic hip mobility). Elevated
knee-height rack or trap-bar pulls 3×8–10 reps, 90–120 s rest (flat-back hip hinge, focus on glute and
```

```
hamstring engagement). Goblet squats 12 kg 3×10–12 reps, 90–120 s rest (controlled depth, keep torso
upright). Bodyweight split squats 2×10–12 reps per leg, 90 s rest (short stride, upright posture). Glute
bridges 3×12 reps, 60 s rest (squeeze glutes at top). Pallof press 3×10 reps per side, 60 s rest (anti-
rotation, braced core). Plank 3×30 s, 30 s rest. Cool-down 3 min (light stretching for hips and lower back).
Follow with your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and core stability that protect
your lower back on long climbs and in the saddle, directly supporting your fat-loss goal by enabling
sustained high-quality training without injury, and your 200 km brevet and PBP goals by locking in a pain-
free hip hinge. Skipping it delays the safe hinge progression, leaves your back vulnerable on long rides,
and undermines the core strength needed to maintain an aerodynamic, sit-bone-friendly cycling posture."
  }
}
```

SEASON REVISION

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.5/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean, contains only the requested today object, and matches the planned 45-minute moderate indoor gym session dated 2026-10-30 with bikeWorkout null, FTP 220 and a sensible TSS. The exercise list is specific with sets, reps, rest and a stop rule for the hinge, and split squats are capped at two sets as the week plan requires. Weaknesses: loads for the lat pulldowns and rack pulls are left vague despite the athlete's logged 50 kg pulldown, and the description does not restate the daily mobility circuit, though the rationale is specific to the hinge and back goals. Season revision: The response names Atlas in the season goal, the block 3 focus and the rationale, keeps block 1 starting on 2026-10-21, tiles the season contiguously to 2027-04-04, and leaves tomorrow, nextWeek and nextBlock null with an empty bodyMetrics array, which is correct. Its main weakness is design: the Endurance build block ends on 2027-02-28, the Atlas race day itself, so there is no taper or recovery before Atlas, and the athlete's four-month ceiling is acknowledged in the rationale but never built into the season as a reset point. Paris-Brest-Paris appears only as a long-term note, and blocks 2 to 5 are thin, while the current block's later weeks (4 to 7) are essentially unchanged from the supplied plan despite the new goal. Week 2 and today's session are coherent and grounded in the activity data, but the Oct 28 run and row were merged into one session with a combined TSS that is not clearly separated from the recorded data.

deepseek/deepseek-v3.2-exp

9.5/12.5

DeepSeek: DeepSeek V3.2 Exp

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	B	A+	165.9 s	$0.00867	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00668	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.7/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.2/2

Combined judgment: Today plan: The response is clean valid JSON with the requested today object, correct date, planned status, 45-minute moderate gym workout, indoor and no bikeWorkout flags, and an FTP of 220 W consistent with the plan. The exercise list (elevated rack pulls, split squats at 2 sets, single-arm row, Pallof press, glute bridge) fits the block's hinge and core focus and the coach's Friday notes, with rest and heart-rate cues. Weaknesses are the lack of load progression or RPE guidance, no fallback for missing equipment or pain, and the rationale leans on generic phrases like aerodynamic position rather than specific current-week targets. Season revision: The response names Atlas throughout, keeps block 1 starting on 2026-10-21, returns exactly seven week sessions with a matching today object, and leaves tomorrow, nextWeek and nextBlock null as required. The main design flaw is that the Atlas taper is placed after the race: block 2 ends on 2027-02-27 with no pre-race taper, and the block labelled Taper and Execution starts on race day 2027-02-28, so the race is not properly prepared for. Block 1 is also barely changed beyond its rationale and some load wording, and the rationale text includes meta-commentary such as the block structure is adjusted and the week successfully delivered, while the athlete's four-month training ceiling is only mentioned rather than built into a reset.

minimax/minimax-m2.5

MiniMax: MiniMax M2.5

9.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	273.8 s	$0.0255	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00646	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.5/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate returns a clean today object that matches the planned Friday gym session on 2026-10-30 in date, status, type, intensity, duration, TSS, FTP and indoor flags, with a sensible progression of hinge, unilateral leg, row, anti-extension and side-plank work that respects the earlier back and quad feedback. Its weaknesses are that the prescription is somewhat generic for an athlete who asked for very specific strength targets, the load for the rack pulls is only loosely defined, and the claim that split-squat imbalances drive sit-bone discomfort is speculative rather than grounded in the input. The rationale is specific and states the concrete cost of skipping, though it leans on some broad claims about posterior-chain resilience. Season revision: The response keeps the valid eight-key contract, starts block 1 on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and names Atlas in the season goal, season rationale and block rationale. The season blocks tile correctly through 2027-08-19. However, the season misplaces the race: the Atlas-Specific block ends on 2027-02-21 and the Post-Atlas Recovery block starts 2027-02-22, so the 28 February Atlas race falls inside the recovery block. Block 1 weeks, the week sessions and today's session are essentially unchanged from the supplied plan, with only the rationale text reworded, so the block shows little Atlas-specific preparation. The later blocks are name-and-focus stubs with no concrete targets beyond the first block's weeks. Hard gates failed: block 1 is unchanged.

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B — 45 min. Warm-up: 5 min easy bike or row at conversational pace, then
dynamic hip and spine mobility (leg swings, hip circles, cat-cow). Main session: (1) Elevated knee-height
rack pulls or trap-bar pulls — 3 sets of 10–12 reps at a light load (start with just the bar or ~20 kg),
focusing on a flat-back hip hinge, neutral spine, and driving through the heels; rest a full 90–120 s
between sets so heart rate drops below 110 bpm. (2) Bodyweight Bulgarian split squats — 2 sets of 10/side,
holding onto a rack for balance if needed; rest 60–90 s. (3) Single-arm dumbbell row — 3 sets of 10/side at
a moderate weight (12–16 kg); rest 60–90 s. (4) Dead bug — 3 sets of 10/side, moving slowly with a full
exhale on the extension and keeping the lower back pressed into the floor; rest 45–60 s. (5) Side plank — 2
sets of 20–30 s/side. Finish with your daily 8-minute hip and spine mobility circuit (couch stretch,
standing forward fold, 90/90 hip rotations, deep squat hold, supine figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and unilateral leg strength you
need to hold a more aerodynamic, pain-free cycling position on long rides and to climb out of the saddle
without lower-back fatigue. The elevated rack pulls safely retrain your hip hinge pattern after the
detraining break, protecting your back while rebuilding the strength required for centuries and the 1200 km
Paris-Brest-Paris in August 2027. The Bulgarian split squats address the left-right imbalances that
contribute to your sit-bone discomfort on long rides, and the anti-extension and lateral core work directly
stabilizes your spine under fatigue. Skipping it would leave your hip hinge untrained for another week,
delay the safe progression to heavier pulling work, and compromise the core stability that keeps your back
ache-free on long climbs — directly undermining your second goal of a pain-free cycling posture and your
third goal of long rides at a decent pace."
  }
}

OpenAI: GPT-5.1

9.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	27.7 s	$0.0767	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00658	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 1.2/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The response is clean JSON with only the requested today object, and it correctly keeps today as a planned indoor 45-minute moderate gym workout with the planned TSS, FTP and indoor flags. The session follows the block's hinge progression, with knee-height pulls, two bodyweight split-squat sets and a core circuit, and its heart-rate and rest cues reflect the athlete's feedback. Weaknesses: the warm-up includes bodyweight good mornings even though the athlete has said they cannot go straight to good mornings without injury, no starting loads are given for the pulls or lat pulldown, and the lat pulldown and dead bug are not clearly tied to the plan's stated exercises. Season revision: The response names Atlas in the season goal and rationale, keeps block 1 starting on 2026-10-21, and genuinely revises block 1 focus, rationale and weekly targets, with a valid eight-key contract and tomorrow, nextWeek and nextBlock correctly null. However, the season was barely re-planned: blocks 2 to 5 are essentially unchanged, the season still ends on 2027-04-04, Paris-Brest-Paris in August 2027 is absent from the timeline, and the Atlas race on 28 February 2027 sits at the end of block 3 with the brevet taper placed after it, which is chronologically incoherent. The current week and today's run are well grounded in the supplied activities and forecast, with sensible week-level load, though the Wednesday rowing and run were merged into one session and today's rationale is only loosely connected to the new Atlas goal.

```

```
    "bikeWorkout": null,
    "description": "Gym Strength B session focused on a safe hip hinge pattern, single-leg stability, and
core strength to support long rides and protect your back.\n\nWarm-up – 8–10 minutes\n- 5 minutes easy
cardio (bike, treadmill walk, or stair machine) keeping HR <120 bpm.\n- Dynamic mobility: 1 set each of 10
bodyweight good-mornings, 10 reverse lunges per leg, 10 hip circles per direction, 10 cat-cows.\n\nA.
Elevated Rack/Trap-Bar Pulls (Hip Hinge) – 3 x 8\n- Set bar or trap bar so the weights sit around knee
height.\n- Choose a light load that feels easy-moderate (no back strain).\n- 3 sets of 8 controlled reps.\n-
Focus: flat back, push hips back, bar stays close to legs, drive through heels to stand.\n- Rest 90–120
seconds between sets; let HR drop <110 bpm before each new set.\n\nB. Bodyweight Split Squats – 2 x 8–10 per
leg\n- Stand in a split stance, rear foot on the floor (not elevated).\n- Lower under control, keep front
knee tracking over mid-foot, torso tall.\n- 2 sets of 8–10 reps per leg at bodyweight only.\n- Rest ~60–90
seconds between sets.\n\nC. Lat Pulldown – 3 x 10\n- Use a weight that is controlled but challenging by reps
8–10.\n- 3 sets of 10 reps, 60–90 seconds rest.\n- Focus on squeezing shoulder blades down and back; do not
lean too far back.\n\nD. Core Circuit – 2 rounds\nPerform as a circuit with ~30–45 seconds rest between
exercises and 60 seconds between rounds.\n1) Pallof Press – 10 reps per side\n   - Light-moderate cable or
band; resist rotation, tall posture.\n2) Front Plank – 30 seconds\n   - Neutral spine, glutes lightly
engaged, avoid sagging.\n3) Dead Bug – 8–10 controlled reps per side\n   - Lower opposite arm/leg while
keeping low back lightly pressed into the floor.\n\nCool-down & Mobility – 5–8 minutes\n- Easy walk or very
light bike 2–3 minutes.\n- Then your 8-minute hip/spine mobility circuit: couch stretch/low lunge, standing
forward fold with soft knees, 90/90 hip rotations, deep squat hold, supine figure-4 glute stretch, and cat-
cow.\n\nKeep all sets technically crisp and stop immediately if you feel any sharp pain in your back or
hips. It is better to err on the side of lighter loads and perfect form than to chase weight.",
    "optional": false,
    "optionalRationale": "This session is a key piece of your Autumn Re-Entry block: it builds the hip-hinge
strength, single-leg stability, and core control that let you sit in a lower, more comfortable position on
the bike without back pain or overloaded sit bones. Skipping it would slow your progress toward a stronger,
more resilient back and hips, which are crucial for long climbs and multi-day rides like PBP and for
tolerating higher cycling and running volume later in the season."
  }
}
```

SEASON REVISION

8.1/12.5

```
{
  "season": {
    "goal": "Build sustainable long-distance cycling fitness for the Atlas Mountain Race on 28 February
2027, a full brevet series including a 200 km in April 2027, and Paris-Brest-Paris in August 2027, while
keeping the training structure realistic enough that you can maintain disciplined progress longer than your
usual 3–4 month window.",
    "rationale": "Your primary targets now extend beyond the April 200 km brevet to the Atlas Mountain Race
in late February 2027 and Paris-Brest-Paris in August 2027, with the brevet series in between. This demands
not only the aerobic base to complete a 200 km ride but also multi-day durability, off-road capable
strength, and a training structure you can sustain for more than the 3–4 months you have historically
managed. The season from 2026-10-21 to 2027-04-04 therefore serves as phase one of a longer ultra-cycling
journey: it prioritises consistent, low-fatigue aerobic development, efficient cadence on the bike, and
basic strength that will later support tougher terrain and back-to-back days. Skiing and running stay in as
supportive, low-impact tools to keep you mentally fresh and physically resilient through the winter without
overloading cycling. Volume and intensity are progressed conservatively so you arrive at the April 200 km
with a solid base and the motivation to continue building toward Atlas Mountain Race and Paris-Brest-Paris
rather than peaking early or burning out.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue so
you can sustain training consistency into 2027’s ultra and brevet goals.",
    "rationale": "This block establishes the aerobic and strength foundation for Atlas Mountain Race, your
brevet series, and Paris-Brest-Paris while deliberately keeping fatigue controlled so you can stay
consistent for more than your usual 3–4 months. The recent three-hour Zwift race at very high heart rate,
plus pole vaulting and strength work, showed you can accumulate a lot of load quickly, so the block now
emphasises strict aerobic control, cadence above 85 rpm on flat indoor rides, and clear separation of
strength from endurance. Week 1 absorbed the unexpected race load, Week 2 focused on low-fatigue aerobic
rebuild, and Week 3 now introduces only a single controlled threshold session alongside mostly easy riding
and one strength session. A deload in Week 4 preserves freshness and motivation, and Weeks 5–7 gradually
increase endurance volume and introduce modest tempo without compromising recovery. Keeping intensity
modest, volume progressive, and workouts clearly purposeful builds the durability and habits you need for
ultra-distance while avoiding the boom–bust pattern that has limited you in past training blocks.",

recent race load while keeping consistency before adding threshold work.",
    "rationale": "This week rebuilds steady aerobic work without accumulating fatigue, so you stay
consistent heading into a more structured Week 3. You have already logged two strength sessions, one rowing
session, one short easy run, and a 2 h hike, all with heart rate under 140 bpm, which fits the goal of
controlled, low-stress training after the very hard three-hour Zwift race. Thursday’s trainer ride remained
missed on purpose rather than being made up, protecting freshness. Today’s short easy run keeps running
durability alive at minimal cost and rounds out the week toward about 5–6 hours total. The weekly structure
supports your long-distance goals by consolidating base fitness without overreaching, an important step
toward breaking your past pattern of only sustaining disciplined training for a few months.",

OpenAI: GPT-5.1-Codex-Max

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	C	37.9 s	$0.1008	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00655	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate enum values, 45 minutes, indoor flag, 220 W FTP, 30 TSS and a null bikeWorkout, all matching the current plan for the gym day. The session is well chosen for the hinge and core goals, with knee-height pulls, split squats capped at two sets, bridges, pulldowns, Pallof presses and planks, and it reuses the coach's 90 to 120 second rest and below 110 bpm guidance. Weaknesses are that the pull load is left as light and unquantified, there is no RPE or rep-in-reserve guidance, and the rationale is somewhat generic about fat loss and back resilience rather than tying to the specific week's load target. Season revision: The season correctly names Atlas on 28 February 2027, places it in a dedicated peak and taper block ending on that date, keeps PBP in August 2027, and tiles all blocks contiguously with block 1 still starting on 2026-10-21. The current block is weakly revised: its name, focus, dates and seven weeks are essentially the supplied ones, with mainly the rationale rewritten, so the Atlas change is thin inside the block itself. The season rationale uses meta phrasing such as the season now spans, and the post-Atlas blocks are generic with little Atlas-specific preparation, though today's rationale does tie the run to Atlas and the spring brevet. The current week and today are coherent, dated correctly, and grounded in the logged sessions, but the 4-month sustainability limit is only addressed by claimed deloads rather than a concrete structure. Hard gates failed: block 1 is unchanged.

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session focused on rebuilding a safe hip hinge and lower-body stability without
overloading your back: warm up with 5–7 minutes of dynamic mobility (hips, thoracic spine), then 3x10
elevated rack or trap-bar pulls from knee height with a light, controlled load, resting 90–120 seconds to
let HR drop below 110 bpm. Follow with 2x8–10 bodyweight split squats per leg, pausing briefly at the bottom
for control. Add 3x12 glute bridges, 3x10 lat pulldowns (build weight across sets if form stays crisp), 3x10
Pallof press per side, and 3x30s front plank. Finish with the 8-minute hip/spine mobility circuit. Keep all
reps smooth, spine neutral, and hinge flat-backed.",
    "optional": false,
    "optionalRationale": "This session fortifies your hip hinge and single-leg stability so your back stays
pain-free on long rides and hikes while supporting fat loss; skipping it would slow your return to stronger,
more resilient cycling posture and delay back-friendly strength progression."

aion-labs/aion-3.0

9.5/12.5

AionLabs: Aion-3.0

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	D	274.2 s	$0.1827	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00665	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.5/3 · Rationale 1.3/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute gym workout with the right indoor flags, date and FTP, and its structure follows the week plan: knee-height rack pulls, two split-squat sets, lat work, bridges, Pallof presses and planks, with sets, reps, rest and a heart-rate recovery cue. Its weaknesses are that no loads or load-progression guidance are given for the pulls, pulldowns or Pallof press, and no RPE or fallback is offered for lower-back or quad discomfort, so execution detail is thinner than the athlete's request for very specific strength prescriptions. The rationale ties the session to lower-back protection and brevet readiness, but it does not reference the week's target load or the block focus. Season revision: The output is valid, keeps block 1 starting on 2026-10-21, tiles the season without gaps, names Atlas in the season, block and week rationales, and gives a concrete, well-executed plan for today. Its main weakness is that block 1 is barely changed: only the rationale was rewritten while the weeks and targetLoad text stay as before, and no Atlas-specific preparation such as off-road, hike-a-bike or long-climb work appears in the block weeks. The plan also does not address the athlete's four-month ceiling with a reset, instead stacking roughly ten months of blocks, and it adds unsupported details such as off-road demands and night riding that are not in the input. Hard gates failed: block 1 is unchanged.

TODAY PLAN

10.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
72.6 s	$0.0695	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 2.0/2 · Design 2.5/3 · Rationale 1.7/2 · Grounding 1.7/2 · Detail 1.4/2

Judgment: The candidate correctly keeps today as a planned moderate 45-minute gym workout with the right indoor flags, date and FTP, and its structure follows the week plan: knee-height rack pulls, two split-squat sets, lat work, bridges, Pallof presses and planks, with sets, reps, rest and a heart-rate recovery cue. Its weaknesses are that no loads or load-progression guidance are given for the pulls, pulldowns or Pallof press, and no RPE or fallback is offered for lower-back or quad discomfort, so execution detail is thinner than the athlete's request for very specific strength prescriptions. The rationale ties the session to lower-back protection and brevet readiness, but it does not reference the week's target load or the block focus.

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B: Focus on safe hip-hinge mechanics and posterior-chain resilience.\n1.
Warm-up: 5 min easy cardio (rower or bike) + 10 bodyweight squats, 10 glute bridges.\n2. Elevated rack or
trap-bar pulls (knee height): 3 sets x 8-10 reps. Rest 90-120s. Keep back flat, hinge at hips.\n3.
Bodyweight split squats: 2 sets x 8-10 reps/leg. Rest 90s.\n4. Lat pulldowns: 3 sets x 10-12 reps. Rest
90s.\n5. Glute bridges: 3 sets x 12 reps. Rest 60s.\n6. Pallof press: 3 sets x 10 reps/side. Rest 60s.\n7.
Plank: 3 sets x 30-45s. Rest 60s.\n8. Cool-down: 5 min stretching.\nTake full 90-120s rest before pulls and
split squats so HR drops below 110 bpm.",
    "optional": false,
    "optionalRationale": "Skipping this session loses the critical posterior-chain strength and safe hip-
hinge mechanics that protect your lower back during long brevet climbs and heavy cycling efforts, directly
undermining your core strength goal and Paris-Brest-Paris readiness. This gym work builds the durable, pain-
free posture you need to ride 1200 km comfortably."

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race in
February.",

Google: Gemini 3.1 Pro Preview

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	**B**	**D**	**132.9 s**	**$0.2642**	**yes**

HARD GATES	JUDGE COST	JUDGED
pass	**$0.00648**	**anthropic/claude-haiku-5.5**

Mentions Atlas **pass**	Block 1 changed **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is clean and matches the requested today object, with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and FTP of 220 W. The session sensibly follows the block's hinge progression: rack or trap-bar pulls, two bodyweight split-squat sets, rows and planks, with a 110 bpm recovery cue that matches the athlete's feedback. Weaknesses: the description gives no load guidance or RPE for the pulls and rows, omits the goblet squats the week plan asks for, and only refers to the mobility circuit rather than listing it. The rationale also mentions loading the deadlift, which the plan had replaced. Season revision: The season is refreshed in place with Atlas on 28 February 2027 as the anchor, the blocks tile contiguously to the August season end, block 1 still starts on 2026-10-21, and the week and today objects are coherent with the supplied data. Block 1 is only lightly changed: Week 2 load and Week 7 focus are adjusted, while the block name and Weeks 3-6 keep the original generic cycling loads with no off-road or hike-a-bike preparation for Atlas. The season invents qualifiers and events the athlete never mentioned (a 300 km qualifier, 400 km and 600 km brevets), and today's rationale calls Week 3 next week even though it starts tomorrow. Today's session and the week's sessions are otherwise well grounded in the rain forecast, the 135 bpm and 140 bpm caps, and the completed sessions.

HARD GATES	JUDGE COST	JUDGED
pass	$0.00648	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.6/3 · Rationale 0.8/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, uses the correct date and planned status for today, and the session fits the Friday Gym Strength B slot with a moderate 45-minute prescription and explicit sets, reps, and 90 to 120 second rest that respects the athlete's heart-rate recovery cue and the two-set cap on split squats. The main weakness is that optionalRationale is left empty while optional is false, and the purpose statement is buried in the description as a Rationale sentence rather than naming the concrete loss from skipping, so the rationale component is weak. Detail is good on load guidance and technique cues, though it lacks explicit stop conditions for back pain and a fallback for the rack pull equipment. Season revision: The response names Atlas throughout the season, rewrites the season goal and rebuilds the post-block structure around Atlas, PBP and the brevet series, and keeps block 1 starting on 2026-10-21 with a changed focus and rationale. The block dates tile correctly through 2027-08-29 and today, tomorrow and nextWeek are handled as required. However, the design is weak: block 3 runs straight into Atlas on 28 February with no taper or race-readiness phase, the season spans about ten months of continuous structured blocks despite the athlete's stated four-month disciplined-training ceiling, and the later block weeks still carry the old winter-plan wording rather than Atlas-specific targets. The Wednesday session was also merged and retitled as a combined rowing and run day, which alters a completed record more than necessary.

    "description": "Warm-up: 5 min dynamic mobility (leg swings, cat-cow, hip circles, bodyweight squats).
Main work, with 90–120 s rest so HR drops below 110 bpm before each set: 1) Elevated knee-height rack or
trap-bar pulls – 3×10, light load (~30–40 kg) focusing on flat-back hip hinge; 2) Bodyweight split squats –
2×8 each leg, controlled tempo; 3) Lat pulldowns – 3×10 at moderate weight (start ~40 kg); 4) Pallof press –
3×10 per side, hold end-range 2–3 s; 5) Plank – 2×30 s; 6) Side plank – 2×30 s each side. Cool-down: 5 min
hip-flexor/low-back stretching. Finish with 8 min unrecorded hip/spine mobility circuit (couch stretch,
forward fold, 90/90, deep squat hold, figure-4, cat-cow). Rationale: Builds the posterior-chain and core-
stability foundation essential for a pain-free, aerodynamic cycling posture on long rides and climbs, while
protecting your lower back and quads.",

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027 with durable climbing endurance, then
finish the brevet series culminating in Paris-Brest-Paris in August 2027—starting with a 200 km brevet in
April—while respecting a maximum 4-month disciplined training window.",
    "rationale": "The season is structured around three anchors: Atlas Mountain Race (28 Feb 2027), a
randonneur brevet series beginning with a 200 km in April, and Paris-Brest-Paris in August 2027. The athlete
can sustain disciplined training for roughly 4 months, so each phase has a sharp focus with periodic deloads
and transitions. The first block builds an aerobic and strength foundation; winter cross-training preserves
cycling specificity while developing general durability through skiing and running; a sustained-power build
sharpens climbing endurance for Atlas; post-race recovery and a brevet-specific phase prepare for the 200 km
qualifier; a progression through longer brevets builds the ultra-endurance needed for PBP; and a final taper
and race block delivers a healthy, well-fuelled performance in August.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control.",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 min rowing plus a 32-min easy run, a missed Thursday
trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned 90-min
trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the week closes
with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and Sunday stays
deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-min run keeps
running-specific durability alive at minimal cost, and the week's remaining priority—cadence above 85 rpm
from the first minute of every ride—carries into next week, because repeatable efficiency at low intensity
is what carries you through ultra-endurance events like the Atlas Mountain Race and the brevet series.",

Mentions Atlas **pass**	Block 1 changed **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.9/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned 45-minute moderate gym session on 2026-10-30 with the correct indoor flag, 220 W FTP and 30 TSS. The exercise selection is sensible and follows the coach's Gym Strength B direction, with explicit sets, reps, rest periods and a cue for the hinge, though the load guidance stays vague and there are no stop conditions or RPE targets. The rationale is somewhat generic: it cites back strength and posture but does not name the concrete cost of skipping toward the fat-loss or block goals. Season revision: The candidate names Atlas in the season goal, the block 2 name and the Atlas taper block, and block 1 still starts on 2026-10-21 with a valid eight-key contract and seven week sessions. Its main fidelity flaw is that the season endDate of 2027-08-31 does not match the last block, which ends 2027-08-20, leaving an unplanned gap. Block 1 is only lightly changed: its focus and rationale are reworded while its weeks and targetLoad text stay as supplied, and today's description is rewritten rather than kept with a completion note. The season also runs continuously from October to March without the athlete's stated four-month reset, which weakens the design. The weekly and daily rationales are specific and grounded in the athlete's constraints, but the outline days give little concrete detail.

    "description": "This is your second strength session of the week, designed to complement Tuesday's
workout. Focus on controlled movements and perfect form, especially on the new hinge exercise.\n\nWarm-up (5
```

```
min):\n- 5 minutes of light cardio (e.g., stationary bike, rower) followed by dynamic stretches like leg
swings, arm circles, and cat-cow.\n\nMain Set (35 min):\n- Take 90-120 seconds of rest between each set,
allowing your heart rate to drop.\n- A1: Elevated Rack or Trap-Bar Pulls (bar starting just below knee
height): 3 sets of 8 reps. Focus on maintaining a flat back and hinging at your hips. Start with a very
light, conservative weight to master the form.\n- A2: Bodyweight Split Squats: 2 sets of 10 reps per leg.
Keep your torso upright and control the descent.\n- B1: Dumbbell Bench Press: 3 sets of 10 reps.\n- B2:
Seated Cable Row: 3 sets of 10 reps.\n- C1: Side Plank: 3 sets of 30 seconds per side.\n\nCool-down:\n-
Conclude the session with your 8-minute daily hip and spine mobility routine.",
    "rationale": "This session introduces the second part of your weekly strength routine, focusing on
safely re-establishing the hip hinge pattern with elevated pulls to build back strength without risk of
injury. It also includes unilateral leg work to improve stability and balance, plus upper body and core
exercises for a balanced, full-body stimulus that supports your cycling posture and overall durability.",
    "optional": false,
    "optionalRationale": "Skipping this session means missing the foundational workout for rebuilding your
hip hinge, a critical movement for developing a more powerful and comfortable cycling position and
protecting your lower back from pain on long climbs and during daily life. This is your primary opportunity
this week to strengthen the posterior chain and core muscles that will allow you to hold a more aerodynamic
position without discomfort or injury."
  }
}
```

SEASON REVISION

8.7/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
76.1 s	**$0.1039**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.9/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.2/2

Judgment: The candidate names Atlas in the season goal, the block 2 name and the Atlas taper block, and block 1 still starts on 2026-10-21 with a valid eight-key contract and seven week sessions. Its main fidelity flaw is that the season endDate of 2027-08-31 does not match the last block, which ends 2027-08-20, leaving an unplanned gap. Block 1 is only lightly changed: its focus and rationale are reworded while its weeks and targetLoad text stay as supplied, and today's description is rewritten rather than kept with a completion note. The season also runs continuously from October to March without the athlete's stated four-month reset, which weakens the design. The weekly and daily rationales are specific and grounded in the athlete's constraints, but the outline days give little concrete detail.

```
{
  "season": {
    "goal": "Your primary goal is the Atlas Mountain Race on February 28, 2027, followed by Paris-Brest-
Paris in August 2027. This plan is designed to build the deep ultra-endurance, durability, and consistency
required for these events, while also preparing you to comfortably complete the qualifying brevet series
starting in April. A key focus is sustainable progression, respecting your history of peaking after 4 months
of training.",
    "rationale": "This season is structured to build you towards your ambitious ultra-endurance goals of the
Atlas Mountain Race and Paris-Brest-Paris. Given your feedback on maintaining progress, the entire plan is
built around long-term sustainability. We will start with a foundational block to establish a deep aerobic
base, improve cycling efficiency, and build functional strength. The plan then progresses to event-specific
training, first focusing on the demands of the AMR (endurance, climbing, back-to-back days), followed by a
recovery period. The second half of the season will shift focus to the long-distance road endurance required
for the brevet series and PBP, using the brevets themselves as key training milestones. This long-term,
periodized approach is designed to build your fitness methodically and bring you to your peak for each major
event.",

deepseek/deepseek-v4.1-flash-1017

9.2/12.5

DeepSeek: DeepSeek V4.1 Flash 1017

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	A	A+	80.8 s	$0.0100	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00651	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid, matches the requested today shape, uses the correct date and planned status, and keeps the planned 45-minute moderate gym session with correct flags and FTP. The session follows the week plan's hinge and split-squat progression and the athlete's safety limits, but it omits the heart rate targets the athlete asked for and the lat pulldown and planks lack load or progression guidance. The rationale is specific to back resilience and the spring brevets, though it never explains why this session matters this particular week beyond general statements, and the warm-up and stop conditions are present but thin. Season revision: The answer names Atlas in the goal and in the block 3 name, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and gives a detailed 50-minute indoor cadence session with power targets that sum correctly. Its main weakness is design: the Atlas build block ends on race day 2027-02-28 with no taper or reduced-volume week before the race, which contradicts the sane-taper expectation. Block 6 also declares 10 weeks across a span of about 65 days, and the season claims to respect the four-month limit through shorter blocks while only Block 1 contains a deload. Smaller issues include merging the past Wednesday rowing and run into one session, extra top-level keys beyond the eight requested, and a today rationale that still uses replacement wording.

google/gemini-3.1-flash-image-preview

9.2/12.5

Google: Nano Banana 2 (Gemini 3.1 Flash Image Preview)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	31.3 s	$0.0265	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00631	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.3/2 · Design 1.6/3 · Rationale 1.2/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate values, 45 minutes, indoor flags, and an estimated FTP of 220 W, matching the current plan's Friday gym session. The exercise list is sensible and includes the planned elevated hinge and split squats, with rest guidance tied to the coach's sub-110 bpm recovery target. However, it adds dumbbell bench press and dead bugs without loads, gives no load progression or RPE guidance from the last goblet squat weights, and has no stop conditions for the lower back. The rationale is specific to the back and posture goals but leans on the word critical and does not explain what the sessions structure adds beyond general strength. Season revision: Strengths: Atlas is named in the season goal, the AMR block name and the block rationale, block 1 still starts on 2026-10-21, the season blocks tile to 2027-08-31, and the week keeps seven sessions with tomorrow and nextWeek correctly null. Weaknesses: the AMR block ends on the race day itself (2027-02-28) with no taper or race-specific reduction, the Oct-Feb run of blocks 1 and 2 totals about 19 weeks, which exceeds the athlete's stated four-month ceiling without a reset, and the season rationale is meta-commentary about updating the plan. Block 1 itself is barely changed (only its rationale text), the completed rest day is labelled completed rather than rest, and the completed-session rewrites add little new detail. Hard gates failed: block 1 is unchanged.

google/gemini-3.6-flash

9.2/12.5

Google: Gemini 3.6 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	A	B	62.8 s	$0.0689	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00639	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.6/3 · Rationale 1.2/2 · Grounding 1.6/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, has only the requested today object, and matches the date, planned status, moderate 45-minute gym workout, non-outdoor flags, 30 TSS and 220 W estimates from the plan. The exercise selection follows the plan's Strength B intent, with knee-height pulls replacing floor deadlifts, capped split squats, lat pulldowns, Pallof presses and planks, and it reflects the athlete's back and hip concerns. Weaknesses include no load progression or RPE guidance, a lat pulldown range of 30 to 40 kg that ignores the 50 kg the athlete previously managed, no stop conditions or fallback for back pain, and a rationale that overpromises by saying the work will eliminate back pain and sit-bone pressure. Season revision: The response is valid, keeps block 1 starting on 2026-10-21, tiles the season through 2027-08-29 with no gaps or overlaps, names Atlas in the season and in block 3, and keeps tomorrow, nextWeek and nextBlock null with an empty bodyMetrics array. Block 1 is barely changed, though: its name, focus and rationale are the same as supplied, and only the Week 2 target load moved. The season has no taper or deliberate reset before the 28 February Atlas race, and the 4-month sustainability limit is not explicitly handled across a roughly 10-month plan. The block 3 focus contains a typo, and the block 1 week sessions and rationale say nothing about Atlas, so the current plan shows little Atlas preparation.

```

```
    "bikeWorkout": null,
    "description": "Perform Gym Strength B at the gym with strict focus on lower-back safety and controlled
effort. Begin with light dynamic mobility, then execute 3 sets of 8–10 reps of elevated knee-height rack
pulls or trap-bar pulls using a flat-back hip hinge to build posterior chain strength without lower back
strain; perform 2 sets of 8–10 bodyweight split squats per side (capped at 2 sets to protect your quads); 3
sets of 10 lat pulldowns (30–40 kg); 3 sets of 10 Pallof presses per side; and 3 x 30-second plank holds.
Take a full 90–120 seconds of rest between sets so your heart rate drops below 110 bpm before starting each
set. Conclude with your 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This strength session builds the posterior chain strength, flat-back hip hinge
mechanics, and core anti-rotation stability needed to eliminate lower-back pain, sit-bone pressure, and
fatigue on long cycling climbs. Skipping this workout delays rebuilding glute and spine durability, leaving
your lower back vulnerable to strain when cycling distance and climbing volume increase."

google/gemini-2.5-pro

Google: Gemini 2.5 Pro

9.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	B	C	106.4 s	$0.1229	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00678	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.5/3 · Rationale 1.2/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the date, planned status, 45-minute moderate indoor gym session, FTP of 220 W, null bikeWorkout and TSS of 30 from the current week plan. The exercise selection is sensible and specific, with sets and reps for the hinge pull, split squats, row, press and core work, plus a 90 to 120 second rest and heart-rate recovery cue. Weaknesses: no load guidance or RPE beyond starting light, the goblet squat progression from the plan is dropped without comment, and the rationale leans on generic claims such as lean muscle accelerating fat loss rather than the athlete's specific quad-burn feedback. Season revision: The season is refreshed in place with contiguous blocks from 2026-10-21 through 2027-08-31, the block starts on 2026-10-21, tomorrow, nextWeek and nextBlock stay null, and the response mentions Atlas in the season goal and rationale. Block 1 changes are modest: the name is unchanged, the focus only gains burnout language, and the rationale is generic and never names Atlas or the 200 km April brevet. The season leaves the 4-month disciplined-training ceiling unaddressed, gives Atlas only about five weeks of specific preparation, and does not clearly place the April 200 km brevet. Week and today content is coherent with the supplied data and grounded in the activities, but its rationales are thin and Atlas appears only in today's optional rationale.

TODAY PLAN

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "This is your second strength session of the week, focusing on establishing a safe and effective hip-hinge pattern and building unilateral leg strength. After a 5-minute warm-up of light cardio and dynamic movements, perform the main circuit. Take 90-120 seconds of rest between all sets, allowing your heart rate to drop below 110 bpm.\n\n*   **A1: Elevated Rack/Trap-Bar Pulls:** 3 sets x 8-10 reps. Set the bar just below knee height. Start with a very light weight to perfect a flat-back hip hinge before adding load.\n*   **A2: Bodyweight Split Squats:** 2 sets x 10-12 reps per side. Focus on control and stability.\n*   **B1: Dumbbell Bench Press:** 3 sets x 10-12 reps.\n*   **B2: Single-Arm Dumbbell Row:** 3 sets x 10-12 reps per side.\n*   **C: Core Circuit:** 3 rounds of 10-12 Pallof Press reps per side and a 30-45 second plank.\n\nConclude with your 8-minute daily hip and spine mobility routine.",
    "rationale": "Today's Gym Strength B session introduces the elevated hip hinge (rack/trap-bar pull) to safely rebuild the posterior chain strength essential for a powerful, pain-free cycling posture. Paired with unilateral work like split squats and rows, this workout directly addresses your core stability and flexibility goals, forming the foundation for injury prevention and supporting your primary objective of fat loss through increased lean muscle mass.",
    "optional": false,
    "optionalRationale": "This session is critical for your goals of eliminating back pain and improving cycling posture. The elevated pulls begin the process of safely re-patterning your hip hinge, which is the root cause of your back issues. Skipping this workout would mean delaying the foundational strength work needed to support your back on long climbs and would miss a key opportunity to build the lean muscle that accelerates fat loss."
  }
}

9.2/12.5

Google: Gemini 3.5 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	D	65.8 s	$0.1767	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00650	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.3/3 · Rationale 1.4/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate matches the required date, planned status, gym workout type, 45-minute duration, moderate intensity, non-outdoor flags, 220 W FTP estimate and null bikeWorkout, and it follows the weekly plan's caps such as two split-squat sets. The exercise list is specific with sets, reps, rest and a heart-rate recovery cue, but the rack pull load is only described as light and controlled, with no load guidance or stop conditions. The rationale ties the session to lower-back durability, sit-bone pressure and carpentry, which is grounded, though it omits the goblet squat progression the plan and recent feedback referenced. Season revision: The season names Atlas in its goal and in the AMR-specific blocks, block 1 still starts on 2026-10-21, the blocks tile contiguously through 2027-08-29, and the current week has seven sessions with today's session matching. However, block 1 is barely changed: its focus and weeks 2 to 7 are essentially the old text, and the block rationale only rewords the prior one. The season ignores the athlete's stated four-month ceiling by running disciplined training continuously for about ten months with no planned reset, and the AMR peak block ends one week after the 28 February race with no explicit pre-race taper. The coachQuestion about mountain bikes and winter gear is not necessary and the completed-session descriptions partly restate analysis.

TODAY PLAN

9.1/12.5

OpenAI: GPT-5.6 Luna

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	37.0 s	$0.00608	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00630	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.2/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate returns only the requested today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, FTP of 220 W and a 30 TSS estimate that match the plan. The exercise list follows the week outline and the athlete's stated back constraints, with sets, reps, rest, a heart-rate gate below 110 bpm and a stop-if-back-pain rule. Weaknesses: the rack pulls and lat pulldowns say light or controlled load with no concrete load guidance, and the description does not give a load progression anchored to the athlete's previous lat pulldown work at 50 kg. Season revision: The output keeps the eight-key structure, block 1 starting on 2026-10-21, seven week sessions, a matching today session, empty bodyMetrics and null tomorrow, nextWeek and nextBlock, and it names Atlas in the season goal, block 3 and the block 1 rationale. Block 1 is effectively unchanged: its weeks and targets are copied from the supplied plan and only the rationale text differs, so the requirement for a genuinely changed block 1 is weakly met. The season ends on 2027-04-04 and omits any Paris-Brest-Paris build or August 2027 endpoint, and block 3 ends on the Atlas date with no taper before the race, which is a weak design response to the new goal. The four-month ceiling is not explicitly managed across the roughly six-month continuous run of blocks 1 to 3. Week and today content is coherent and grounded in the logged activities and the forecast, with sensible indoor placement for today.

TODAY PLAN

10.6/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.4/3 · Rationale 1.7/2 · Grounding 1.7/2 · Detail 1.4/2

Judgment: The candidate returns only the requested today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, FTP of 220 W and a 30 TSS estimate that match the plan. The exercise list follows the week outline and the athlete's stated back constraints, with sets, reps, rest, a heart-rate gate below 110 bpm and a stop-if-back-pain rule. Weaknesses: the rack pulls and lat pulldowns say light or controlled load with no concrete load guidance, and the description does not give a load progression anchored to the athlete's previous lat pulldown work at 50 kg.

qwen/qwen3.5-plus-02-15

9.1/12.5

Qwen: Qwen3.5 Plus 2026-02-15

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	C	A	256.9 s	$0.0323	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00651	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.7/3 · Rationale 1.4/2 · Grounding 1.3/2 · Detail 1.3/2

Combined judgment: Today plan: The session matches the plan on date, status, type, intensity, 45 minutes, indoor flag, FTP of 220 W, TSS of 30, and a null bikeWorkout, and the exercises follow the week's specified elevated pulls and two split-squat sets. The description gives concrete sets, reps, rest periods, a heart-rate recovery cue, and a stop rule for quad burn, which fits the athlete's requested strength specificity. Weaknesses are that it adds a non-schema rationale field inside today, gives no load guidance or assumption for the pull and lat weights despite the athlete's history of 12 kg goblet squats and 50 kg lat pulldowns, and the optional rationale is fairly generic about skipping. Season revision: The output is valid, keeps the eight keys, leaves tomorrow, nextWeek and nextBlock null, starts block 1 on 2026-10-21, and tiles the later blocks through 2027-08-31 with Atlas named in the season goal and a new Atlas Mountain Race Build block. However, the current block is essentially unchanged apart from shifted week start dates, and its focus and rationale never name Atlas, so the Atlas adaptation is weak. The block week start dates are also misaligned with the current week, since week 2 starts 2026-10-28 while the current week starts 2026-10-26. Monday's rest session is marked completed rather than rest, and the season invents altitude and heat-adaptation goals the athlete did not supply. The 4-month limit is not explicitly reconciled with a continuous season running to August.

qwen/qwen3.6-27b

9.1/12.5

Qwen: Qwen3.6 27B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	165.1 s	$0.0371	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00640	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is clean and the today object matches the planned Friday gym session on 2026-10-30 with status planned, 45 minutes, moderate intensity, indoor flags and FTP 220 W, and no activity is invented for today. The session is a reasonable posterior-chain and core workout that respects the lower-back history, but the prescription lacks rep counts and load guidance, and the athlete asked for very specific exercises, sets and reps. The core slot offers an either-or choice between Pallof presses and planks instead of committing to one exercise. The rationale is grounded in the back pain and saddle-posture goals, and the 90 to 120 second rest with a heart-rate cue is useful execution detail. Season revision: The response is valid JSON with the eight keys, seven week sessions, a matching today session, an empty bodyMetrics array, and block 1 correctly starting on 2026-10-21. Atlas appears in the season goal and rationale and the season now sequences the Atlas race before a transition block, which is a credible response to the new goal. Weaknesses: block 1 is barely changed (only its rationale moved), so the requirement for a genuinely changed block 1 is only weakly met, and no block name or focus names Atlas. The later season blocks have weekCount errors (the 2027-04-12 to 2027-06-06 block is about 8 weeks but lists 9, and the 2027-06-07 to 2027-08-28 block is about 12 weeks but lists 11), and the season rationale contains some change-narration ('now targets'). The current week and today's session are coherent and grounded in the supplied activities, with past sessions and FTP handled correctly.

TODAY PLAN

    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

9.1/12.5

OpenAI: GPT-5.2-Codex

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	103.6 s	$0.1413	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00632	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.6/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate matches the planned Friday gym session on date, type, moderate intensity, 45 minutes, indoor flag, TSS and FTP, and it follows the coach's hinge and split-squat modifications with HR cues that come from the recent feedback. The exercise list is sensible, with sets and reps for most movements, but the elevated pulls say only light load and the lat pulldown says use the same progression as last time, so the athlete gets no concrete load guidance. The rationale is tied to the back and saddle-pressure goals but is fairly generic, and the description has few technique cues, stop conditions or fallbacks for pain. Season revision: The candidate names Atlas in the season goal, the season blocks and the season rationale, keeps block 1 starting on 2026-10-21, and the season blocks tile correctly through 2027-04-04. Tomorrow, nextWeek and nextBlock are correctly null, and the week has seven sessions with today matching. However, the current block is effectively unchanged: its name, focus, dates and all seven week entries are carried over verbatim, with only the rationale rewritten, so the required genuinely changed block 1 is not delivered and Atlas preparation does not appear in any block 1 week. The race-specific block is also labelled taper and places the 28 February race mid-block, which weakens the season logic, and the week's shape and today's run are reasonable but thin on specific Atlas-oriented detail. Hard gates failed: block 1 is unchanged.

anthropic/claude-sonnet-4.5

9.1/12.5

Anthropic: Claude Sonnet 4.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	D	63.5 s	$0.1616	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00669	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.7/2 · Design 1.9/3 · Rationale 1.5/2 · Grounding 1.1/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON contract, date, status, type, intensity, duration, indoor flags, FTP and TSS all match the plan entry for 2026-10-30, and the session stays within the coach's Week 1 gym constraints. The rationale is specific, linking the hinge work to lower-back pain, sit-bone pressure and the April brevet. Weaknesses: the circuit is internally inconsistent, with 3 rounds stated but split squats limited to 2 sets and no clear timing that fits the 32-minute block. The description also omits any clear load guidance for the pulls and bridges, though it does give useful stop conditions and heart-rate cues. Season revision: The candidate names Atlas throughout, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and builds a credible taper toward the Atlas race with a sensible current week and a detailed today session. However, the season ends on 2027-02-28 and drops Paris-Brest-Paris and the April-to-March brevet series, deferring PBP to a note that a separate season will be built, which the revision request did not ask for. The week's weekday labels are wrong (2026-10-26 is labelled Sunday when it is a Monday, and every following label is shifted by one day), past sessions carry estimatedFtpWatts values where they should be null, and bodyMetrics contains a null-filled entry where an empty array was correct. Hard gates failed: block 1 is unchanged.

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Execute your second gym session of the week, introducing elevated knee-height rack or
trap-bar pulls to safely rebuild your hip hinge pattern without lower-back strain, plus two controlled
bodyweight split-squat sets to protect your quads while building single-leg stability.\n\nWarm-up (8 min): 3
min easy treadmill walk or bike, then 2 rounds of: 8 bodyweight glute bridges, 6 cat-cow spinal waves, 5
deep bodyweight squats.\n\nWorking Circuit (32 min, 3 rounds with 90–120 sec rest between exercises):\n1.
Elevated rack or trap-bar pull from knee height: 3 sets × 8–10 reps at light load (focus on flat-back hip
hinge, letting heart rate drop below 110 bpm between sets)\n2. Loaded glute bridge (barbell or plate on
hips): 3 × 12 reps\n3. Bodyweight split squat (rear foot elevated on low bench): 2 × 8 reps per leg (skip
third set to protect recovering quads)\n4. Pallof press (cable or band, anti-rotation): 3 × 10 reps per
side\n5. Plank hold: 3 × 30 sec\n\nCool-down (5 min): Light stretching focusing on hip flexors and
hamstrings.\n\nFinish with your unrecorded 8-minute hip and spine mobility circuit at home this evening.
Take the full rest intervals so your heart rate drops below 110 bpm before each pulling and squatting set,
and stop the elevated pulls immediately if you feel any lower-back discomfort—your back safety is the
priority as we rebuild the hinge pattern.",
    "optional": false,
    "optionalRationale": "This session directly builds the posterior-chain strength and core stability that
will eliminate your lower-back pain on long climbs and prevent sit-bone blisters by allowing a more
aerodynamic cycling posture toward your April 200 km brevet and August Paris-Brest-Paris goals. Skipping it
leaves your hip hinge weak and your back vulnerable to injury during heavier lifting later in the block,
delaying the postural improvements you need for pain-free long rides. The elevated pull height and capped
split-squat volume protect your recovering lower back and quads while still challenging the glutes,
hamstrings, and core that anchor your cycling position."
  }
}

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, with durable aerobic fitness, efficient
pacing, climbing strength, and multi-day resilience.",
    "rationale": "The season now targets the Atlas Mountain Race on 28 February 2027 as the primary goal,
with the April 200 km brevet serving as a post-race consolidation event and Paris-Brest-Paris in August as
the long-term objective. The athlete has stated they can maintain disciplined training for a maximum of four
months, usually less, so the plan runs from 21 October 2026 to 28 February 2027 — exactly 18.5 weeks, or
approximately 4.25 months — to respect that constraint while building the fitness needed for a multi-day
mountain ultra-endurance race. The progression emphasizes aerobic durability, sustained climbing power,
fueling under fatigue, and back-to-back load rather than peak threshold fitness, because the Atlas Mountain
Race demands resilience over days rather than a single fast effort. The April brevet will follow as an
easier consolidation ride after the race, and a separate season will be built for Paris-Brest-Paris when
this one ends.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This seven-week block builds the aerobic foundation and movement durability needed for the
Atlas Mountain Race's multi-day climbing and endurance demands. The athlete's stated four-month training
tolerance means every week must deliver measurable progress without accumulating fatigue that forces a
break, so the block emphasizes controlled aerobic work capped below 140 bpm, cadence above 85 rpm from the
first minute, and low-load strength that supports climbing without interfering with riding. Week 1 delivered
approximately 587 TSS including an unplanned three-hour race, so Week 2 reduced load to 180-220 TSS with
strict heart-rate control. Week 3 introduces one controlled threshold stimulus, Week 4 deloads, and Weeks 5-
7 progress endurance volume and sustained power conservatively. The 225 W FTP baseline is retained because
no fresh threshold test or sustained power evidence justifies a change, and the block avoids the aggressive
progression that has previously caused the athlete to lose consistency.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through the Atlas Mountain Race's multi-day climbing.",

9.1/12.5

Google: Gemini 3.1 Pro Preview Custom Tools

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	D	70.3 s	$0.2109	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00637	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.7/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate returns a clean today object with the correct date, planned status, gym-based indoor flags, 45 minutes, moderate intensity and the planned 30 TSS and 220 W FTP. The exercise selection follows the plan's Strength B progression with rack or trap-bar pulls, limited split squats, lat pulldowns, Pallof presses and planks, and it includes useful rest and heart-rate guidance. However, the user asked for very specific strength prescriptions with exercises, sets and reps, and the description gives no sets, reps or load progression for most movements, which weakens design and detail. The rationale links the session to back pain and saddle discomfort, but it does not address the specific hunger and fat-loss context that the plan emphasises. Season revision: The season is rebuilt around the Atlas Mountain Race on 28 February 2027 with a post-AMR reset, a spring brevet block and a PBP build, and the blocks tile contiguously from the season start to 2027-08-29. Block 1 still starts on 2026-10-21 and the JSON contract, seven-session week, null tomorrow, nextWeek and nextBlock, and empty bodyMetrics are all correct. Weaknesses: block 1 is largely unchanged apart from its rationale, the block rationale uses meta-commentary about what remains unchanged and what was adjusted, and the first block's weeks barely reflect Atlas preparation beyond wording. Today's session is a reasonable easy run with its completion context and the week keeps a sensible shape, but the Atlas-specific load progression is only sketched in the outline. Hard gates failed: block 1 is unchanged.

TODAY PLAN

F	B	A	165.2 s	$0.0153	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00707	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.2/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid, the date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and null bikeWorkout all match the current plan for 2026-10-30. The rationale is specific to the athlete's lower-back and hip-hinge goals and the block structure, and the session uses the elevated pull and split-squat progressions the plan calls for. The main weakness is that the description omits sets and reps for the rack pulls, cable rows, Pallof presses and planks, even though the athlete explicitly asked for very specific strength prescriptions. Only the rest interval and the mobility follow-up are concretely stated, so execution detail and progression guidance are thin. Season revision: The plan names Atlas, keeps block 1 starting on 2026-10-21, changes the block, and the season blocks tile through 2027-08-23. However, the candidate fills tomorrow, nextWeek and nextBlock even though the supplied values were null and the request said to keep them as supplied, a clear fidelity failure. The season rationale promises a three-week taper that does not exist as a block, and the Thursday interval list sums to about 77 minutes against a stated 70 minutes. The claim of 20+ hour Atlas events and the 115-135 W power targets on an outline day are not grounded in the input.

TODAY PLAN

  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, and build toward Paris-Brest-Paris in
August 2027, supported by the ability to comfortably finish a 200 km randonneur brevet in April 2027.",
    "rationale": "The athlete's goal has expanded from a single 200 km brevet to two major ultra-endurance
events: the Atlas Mountain Race in late February and Paris-Brest-Paris in August, with an intermediate 200
km brevet as preparation. These are significantly more demanding than initially planned, requiring specific
preparation for mountainous ultra-endurance terrain and extended sustained efforts. The season is
restructured into four blocks that respect the athlete's constraint of maintaining disciplined training for
a maximum of four months: a nine-week ultra-endurance base that peaks before the Atlas race, a focused race-
specific block that brings peak fitness to February 28, a three-week taper that also serves as recovery from
the Atlas effort, and an endurance block leading into PBP that rebuilds fitness from mid-March onward. This
blocks-forward approach ensures the athlete peaks twice within the season rather than once, while the
conservative progression in the current aerobic base block remains appropriate given the recent higher-than-
planned load from the Zwift race and pole vaulting activity.",

power, and fueling practice",
    "rationale": "The Race-Specific Preparation block begins on December 21 and runs through February 28,
the date of the Atlas Mountain Race. This 10-week block builds on the nine-week Ultra-Endurance Base by
introducing race-specific work: longer sustained threshold efforts that simulate the demands of mountainous
ultra-distance riding, climbing-specific cadence training on varied terrain, carbohydrate fueling practice
for events lasting 20+ hours, and back-to-back riding days that prepare the body for consecutive long
efforts. The block ends with a two-week taper that reduces volume by 40-50% while retaining brief intensity,
ensuring the athlete arrives at the Atlas start line fresh and race-ready. This block's structure respects
the athlete's four-month training constraint by positioning peak fitness precisely at the Atlas race date,
with a subsequent recovery and rebuild phase before Paris-Brest-Paris in August.",

nvidia/nemotron-3.5-super-vl

9.0/12.5

NVIDIA: Nemotron 3.5 Super VL

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	211.5 s	$0.0252	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00646	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.2/2 · Design 1.5/3 · Rationale 1.2/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and the 220 W FTP, and it matches the Friday gym session in the plan. The session has a sensible hinge-focused structure with rest and heart-rate guidance drawn from the coach feedback, but it is thin on prescription: the split squats, glute bridges, Pallof presses and planks lack reps or loads, and there is no load progression or stop condition, despite the athlete asking for very specific sets and reps. The rationale is specific to the lower back and saddle pressure, though it touches the fat-loss goal only lightly. Season revision: The response names Atlas in the season goal, season rationale, and block 3 focus, keeps block 1 starting on 2026-10-21, and keeps the top-level shape, seven week sessions, and null tomorrow, nextWeek, and nextBlock. Its weakness is design: the season has no dedicated Atlas taper or recovery before 28 February 2027, and block 4 is a brevet-prep block placed after the race. The season rationale also says blocks are seven weeks or fewer, which contradicts the 12-week PBP Endurance Build block. Block 1 is only lightly changed, mainly its rationale, while its weeks and focus are carried over largely as supplied, and the rationales read partly as commentary on what changed. Hard gates failed: block 1 is unchanged.

meta/muse-glimmer-30b

9.0/12.5

Meta: Muse Glimmer 30B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	136.7 s	$0.0339	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00617	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean, dated 2026-10-30, planned with no invented completed activity, and matches the 45-minute moderate indoor gym workout, 220 W FTP and 30 TSS in the plan. The exercise selection follows the block (elevated trap-bar pulls, two bodyweight split squat sets, core work), with sets, reps and rest given. Weaknesses: the core circuit is tied to an assumed continuation of Strength A without that being in the input, the pull load is just light with no starting load or progression guidance, and there are no stop conditions or fallback for back or quad pain. The rationale is specific and grounded in the back, hiking and Zone 1-2 cycling goals. Season revision: The response names Atlas in the season goal, season rationale and block rationale, keeps block 1 starting on 2026-10-21, and returns a valid, complete contract with seven week sessions and correctly null tomorrow, nextWeek and nextBlock. However, the season was not really re-planned: the blocks, including the brevet preparation and taper, still end on 2027-04-04 and are not tied to the 28 February Atlas date, and Paris-Brest-Paris in August 2027 is absent from the season dates and blocks. Block 1 changed only in its rationale while its weeks and targets are unchanged, so the Atlas adjustment is thin and the design does not show a credible build to the race. Hard gates failed: block 1 is unchanged.

TODAY PLAN

10.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
42.1 s	$0.0128	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.8/2 · Design 2.3/3 · Rationale 1.8/2 · Grounding 1.7/2 · Detail 1.4/2

Judgment: The JSON is clean, dated 2026-10-30, planned with no invented completed activity, and matches the 45-minute moderate indoor gym workout, 220 W FTP and 30 TSS in the plan. The exercise selection follows the block (elevated trap-bar pulls, two bodyweight split squat sets, core work), with sets, reps and rest given. Weaknesses: the core circuit is tied to an assumed continuation of Strength A without that being in the input, the pull load is just light with no starting load or progression guidance, and there are no stop conditions or fallback for back or quad pain. {
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B – Hip Hinge & Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "45-minute indoor gym session focused on safe hip hinge progression and core stability to protect your lower back for long rides and hikes. 5-minute dynamic warm-up. Elevated knee-height trap-bar rack pull 3 sets x 6 reps with a light load you can control with a flat back and neutral spine; rest 90–120 seconds between sets to let heart rate drop below 110 bpm. Bodyweight split squat 2 sets x 10 reps per leg with controlled tempo; rest 90 seconds. Core stability circuit – assuming continuation of your Strength A core work – Pallof press 3 sets x 10 reps per side and dead bug 3 sets x 8 reps per side, 60–90 sec rest. Finish with your daily 8-minute hip/spine mobility circuit unrecorded. Prioritize form over load.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and flat-back hip hinge control that lets you stay upright on long climbs without loading your sit bones and spares your lower back on Saturday’s 2-hour hike and Sunday’s Zone 1–2 ride. It also reinforces core anti-rotation stability that improves cycling posture and reduces back ache, supporting the Autumn Re-Entry block’s fat-loss and back durability goals. Skipping it means you lose this week’s hinge progression, leave your back more vulnerable to fatigue on the weekend endurance work, and slow the neuromuscular foundation you need for the April 200 km brevet and Paris-Brest-Paris in August."
  }
}

qwen/qwen3.6-plus

Qwen: Qwen3.6 Plus

9.0/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	B	287.1 s	$0.0422	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00597	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.5/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON contract is valid and the today object matches the planned 2026-10-30 Gym session with the correct moderate intensity, 45 minutes, indoor flag, and TSS of 30, though the title Gym Strength B is a slight rename of the planned Gym session. The exercise prescription is concrete and mostly grounded in the athlete's feedback (elevated rack pulls instead of floor deadlifts, split squats, lat pulldowns, Pallof, planks, rest until HR below 110), but it omits the goblet squat work that the plan's Week 1 structure calls for and adds rest-period and HR guidance that is reasonable but not fully sourced. The optionalRationale is specific to posterior chain and lower-back goals, while the claim about resting metabolic rate is a generic addition. Season revision: The response mentions Atlas in the season and keeps block 1 starting on 2026-10-21, and the season blocks tile contiguously from the start date through 2027-08-15 with the April brevet and PBP retained. However, block 1 is essentially the supplied block with only minor rationale edits, so it is not genuinely changed to accommodate the Atlas goal and its name and focus never mention Atlas. The season has no taper or deliberate peak before the 28 February Atlas race, and the Atlas block ends on the race date with no reduction. Today's session and the completed-week sessions are sound and grounded in the supplied data, but the week is largely unchanged and the current-week rationale never addresses Atlas. Hard gates failed: block 1 is unchanged.

    "bikeWorkout": null,
    "description": "Complete a 45-minute conservative gym session focused on safe hip-hinge mechanics and
core stability. Begin with a 5-minute dynamic warm-up. Perform 3 sets of 8–10 elevated knee-height rack
pulls (or trap-bar pulls), resting 90–120 seconds between sets until your heart rate drops below 110 bpm to
protect your lower back. Follow with 2 sets of 8–10 bodyweight split squats per leg, again taking full 90–
120 second rests. Finish with 3 sets of 10–12 lat pulldowns, 3 sets of 10 Pallof presses per side, and 3 x
30-second planks. Conclude with your daily 8-minute hip and spine mobility circuit. Keep the overall effort
moderate and controlled to support fat loss without triggering evening hunger.",
    "optional": false,
    "optionalRationale": "Skipping this session delays the neuromuscular adaptation of your posterior chain
and hip flexors, which are critical for maintaining an aerodynamic, pain-free cycling posture on long climbs
and preventing the lower-back fatigue that ruins your endurance rides. Consistent strength work also
preserves lean muscle mass, directly supporting your primary fat-loss goal by keeping your resting metabolic
rate elevated."

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 steps per minute. Keep the effort conversational from the
first minute and let pace fall away rather than pushing heart rate up on any incline. Indoors because rain
and 7 m/s gusts are forecast through the day.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this session removes the final aerobic stimulus of the week, slightly
reducing the running-specific durability that supports your cycling base and leaving a gap in the weekly
load progression before the threshold work begins next week.",

x-ai/grok-build-0.1

SpaceXAI: Grok Build 0.1

9.0/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	115.2 s	$0.0664	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00687	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 1.0/2 · Design 1.4/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid and the today object matches the 2026-10-30 planned 45-minute indoor gym session, with correct FTP, TSS, indoor flag and null bikeWorkout. The exercise selection follows the block's conservative hinge progression, with 2 split-squat sets, rest until heart rate falls below 110 bpm, and a cap on load. The weakest parts are the vague load guidance (choose 20-40 kg with no progression or RPE target) and the rationale, which is specific about back and posture goals but does not tie the session to the week's target load. Season revision: The candidate names Atlas throughout the season, the block names and the rationale, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and keeps the current week and today coherent with the supplied facts. Its main failure is that the refreshed season ends on 2027-04-04 and drops Paris-Brest-Paris in August 2027 entirely, so the season no longer covers the stated goal. It also does not address the athlete's four-month ceiling beyond a single sentence, since blocks 1 to 3 run continuously to race day, and block 1 is barely changed for Atlas. The output carries ten top-level keys rather than the eight the revision request lists, and the block rationale wrongly cites feedback after Week 2 that has not yet happened.

TODAY PLAN

10.5/12.5

aion-labs/aion-3.5-mini

9.0/12.5

AionLabs: Aion 3.5 Mini

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	E	B	801.5 s	$0.0900	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00643	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.9/3 · Rationale 1.3/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session matching the week plan, with correct date, enum values, and no extra root keys. The exercise selection follows the block plan (elevated pulls, two bodyweight split-squat sets, lat pulldowns, Pallof, side plank) with sets, reps, rest and HR guidance, though loads like 40 kg and 45 kg are assumed rather than grounded in the recorded lat pulldown history (50 kg top set) and the Pallof and plank details are thin. The rationale is specific to back pain and hinge progression, but it refers to last week's deadlift sidelining in a way that edges toward describing a prior plan change, and the outdoor and canBeOutdoor flags are sensible. Season revision: The season is refreshed around Atlas on 28 February 2027 with contiguous blocks that tile from 2026-10-21 to 2027-08-31, a sensible taper, and PBP retained, and tomorrow, nextWeek and nextBlock are correctly null. However, block 1 is barely changed: its name, focus, and all seven weeks are carried over verbatim, and only the rationale was reworded to mention Atlas, so the block is not genuinely revised for the new goal. The season rationale also opens with meta-commentary about re-planning, and the 200 km brevet in April sits awkwardly against a peak block that begins on 19 April. Today's session is well grounded in the supplied activities, weather and HR ceilings, and past-day statuses are consistent. Hard gates failed: block 1 is unchanged.

Judgment: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session matching the week plan, with correct date, enum values, and no extra root keys. The exercise selection follows the block plan (elevated pulls, two bodyweight split-squat sets, lat pulldowns, Pallof, side plank) with sets, reps, rest and HR guidance, though loads like 40 kg and 45 kg are assumed rather than grounded in the recorded lat pulldown history (50 kg top set) and the Pallof and plank details are thin. The rationale is specific to back pain and hinge progression, but it refers to last week's deadlift sidelining in a way that edges toward describing a prior plan change, and the outdoor and canBeOutdoor flags are sensible.

    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B: Start with a 5-minute easy warm-up on a cardio machine (treadmill, bike,
or rower). Main lifts: 1) Elevated knee-height rack or trap-bar pulls: 3 sets of 8 reps at 40 kg (focus on a
flat-back hip hinge; rest 90–120 s until HR < 110 bpm). 2) Bodyweight split squats: 2 sets of 10 reps per
leg (rest 90 s). 3) Lat pulldown: 3 sets of 10 reps at 45 kg (rest 90 s). 4) Pallof press: 3 sets of 10 reps
per side (rest 60 s). 5) Side plank: 2 sets of 30 s per side (rest 60 s). Cool down with 5 minutes of easy
spinning and your 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge mechanics and posterior-chain resilience
that directly address your lower-back pain on long climbs and your goal of a pain-free Paris-Brest-Paris. By
keeping the split squats strictly bodyweight and capped at two sets, we protect your quads while they
readapt to loading, ensuring you can absorb next week's volume increase without triggering the quad burn
that sidelined your deadlifts last week. Skipping today's elevated pulls delays the hinge strength you need
to safely progress toward heavier squats and compromises the 5.0–5.5 hour Week 1 target load."

SEASON REVISION

8.7/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
548.7 s	**$0.0555**	**yes (2 attempts)**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.9/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.2/2

Judgment: The season is refreshed around Atlas on 28 February 2027 with contiguous blocks that tile from 2026-10-21 to 2027-08-31, a sensible taper, and PBP retained, and tomorrow, nextWeek and nextBlock are correctly null. However, block 1 is barely changed: its name, focus, and all seven weeks are carried over verbatim, and only the rationale was reworded to mention Atlas, so the block is not genuinely revised for the new goal. The season rationale also opens with meta-commentary about re-planning, and the 200 km brevet in April sits awkwardly against a peak block that begins on 19 April. Today's session is well grounded in the supplied activities, weather and HR ceilings, and past-day statuses are consistent.

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is the foundation for the Atlas Mountain Race build.",

HARD GATES	JUDGE COST	JUDGED
pass	$0.00631	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.4/3 · Rationale 1.3/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate keeps the correct date, planned status, workout type, moderate intensity, 45-minute duration, indoor flag and FTP of 220 W, and it returns only the required today object. The gym session follows the plan's Gym Strength B content (elevated rack pulls, two split-squat sets, Pallof, plank) with specific sets, reps and rest, but it adds a 15 kg bar and a 10 kg hip load that were not stated, and the glute bridge and Pallof loads are assumptions without a clear stated basis. The rationale ties the work to back protection and cycling posture, yet it does not mention the lost progress in terms of the block's hinge progression as clearly as it could, and the claim about previous coach guidance is slightly loose. The description is detailed with heart-rate stop targets, though the athlete asked for specific exercises and the candidate did not include a load progression or a fallback for pain. Season revision: The JSON has the required keys, seven week sessions with correct dates, a matching today session, empty bodyMetrics, and a block 1 starting on 2026-10-21 with Atlas named in the block focus and the season. However, the season is weak: block 3 runs to 2027-02-28, the Atlas race day, so there is no taper or reset before Atlas, the April 200 km brevet is dropped from the plan, and the season ends on 2027-08-15 before Paris-Brest-Paris in August. Block 1 changes are mostly rationale and focus wording, and today's description carries meta-commentary about the rain-related indoor choice, though the week and today sessions are otherwise concrete and grounded in the supplied load and heart-rate limits.

    "goal": "Complete a 200 km randonneur brevet in early April 2027 with steady pacing and hilly terrain strength, finish the Atlas Mountain Race on February 28, 2027 with durable aerobic endurance, and lay foundational fitness for Paris-Brest-Paris in August 2027, while structuring training to avoid exceeding 4 months of disciplined training at a time to sustain consistent progress",
    "rationale": "This season structures training to support the athlete's three long-distance cycling goals and their 4-month max disciplined training constraint by dividing work into focused, time-bound blocks with planned transition weeks to reset progress capacity. Recent controlled indoor riding and sustained hiking demonstrate responsiveness to low-fatigue aerobic work, while the 3-hour Zwift race (187 bpm average HR) and pole-vaulting load highlight the need for strict fatigue management. The initial block prioritizes aerobic consistency, 85+ rpm cadence, and low-load strength to build a sustainable base without overextending progress windows. Subsequent blocks integrate winter cross-training (skiing, easy running), controlled threshold work, long endurance rides, and event-specific preparation (pacing, fueling, climbing efficiency) while adhering to 4-month max disciplined training limits. The final weeks before each event include targeted tapering to optimize race readiness",

deepseek/deepseek-chat-v3-0324

8.8/12.5

DeepSeek: DeepSeek V3 0324

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	87.6 s	$0.0115	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00609	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.2/2 · Design 1.5/3 · Rationale 1.1/2 · Grounding 1.4/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean, contains only the today object, and matches the planned Friday gym session on 2026-10-30 in date, status, type, 45 minutes, moderate intensity, indoor flag, 220 W FTP and 30 TSS. The exercise selection follows the plan (elevated hinge pulls, two split-squat sets, Pallof and planks) with explicit sets, reps and rest that reflect the athlete's heart-rate recovery cue. Weaknesses are the absence of a warm-up, no load progression or RPE guidance, no stop condition or pain fallback for the lower back, and a rationale that stays somewhat generic rather than tying the session to the fat-loss goal or the current week's target load. Season revision: The season was refreshed to name Atlas as a block and PBP as a later goal, the block 1 start of 2026-10-21 was kept, and the season blocks tile with no gaps. However, the current block 1 is essentially unchanged in name, focus, weeks and load targets, and its rationale never mentions Atlas, so the block-level revision is weak. The season ignores the athlete's stated four-month ceiling by running disciplined training continuously from October to June with no reset, and it has no Atlas-specific taper before 28 February. Today's session and current week were left almost as supplied, with the week rationale rewritten, and tomorrow and next week and block were correctly left null. Hard gates failed: block 1 is unchanged.

qwen/qwen3.7-plus

8.8/12.5

Qwen: Qwen3.7 Plus

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	216.4 s	$0.0264	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00581	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.4/3 · Rationale 1.1/2 · Grounding 1.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid with the requested today object, the correct date, planned status, workout type and moderate intensity, and matches the Friday Gym Strength B slot with the 45-minute duration. The exercise prescription is specific and follows the plan's goblet squat, elevated pull, split squat and core progression with rest and heart-rate guidance, though the 3 sets of Pallof and planks plus a 5-minute warm-up push the content beyond the planned 45 minutes without clear time accounting. The rationale ties the session to back pain, hip mobility and cycling posture, but it does not explain why skipping costs the athlete the specific Week 1 progression, and it omits the weather note that the session is indoors on a rainy day. Overall it is a solid, grounded session with some timing and load-progression gaps. Season revision: The candidate names Atlas in the season goal, the new blocks and the block rationale, keeps block 1 starting on 2026-10-21, and tiles the season contiguously through 2027-08-30. However, block 1 is essentially unchanged: its name, focus, weeks and targets are copied from the input, and only one sentence about Atlas was appended to the rationale, so the required genuinely changed block 1 is weak. The season does not honour the athlete's roughly four-month limit: blocks 2 to 4 run continuously for about ten months, despite the text claiming phased recovery, and the Atlas build is not reflected in the current block's weeks. Today's session and the week are carried over with little Atlas-specific purpose, and the bikepacking framing is an inference not stated by the athlete. Hard gates failed: block 1 is unchanged.

TODAY PLAN

8.8/12.5

OpenAI: GPT-5.1-Codex-Mini

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	B	196.9 s	$0.0708	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00623	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.0/2 · Design 1.3/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate returns only the required today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 30 TSS and 220 W FTP, and it correctly keeps the session as the planned Gym Strength B with bikeWorkout null. The session draws well on the coach feedback, with the 90 to 120 second rest and sub-110 bpm target, elevated pulls, and two bodyweight split-squat sets. Weaknesses are that the pulls have no load guidance or progression, the Pallof and core-hinge plank element is vague, and there are no stop conditions for back or quad pain. The rationale ties the session to posterior-chain and posture goals but gives only a brief statement of what is lost by skipping. Season revision: Atlas is named in the season goal, season rationale and block rationale, block 1 still starts on 2026-10-21, and tomorrow, nextWeek and nextBlock stay null, so the hard checks pass. The season is weak: the end date stays at 2027-04-04 and Paris-Brest-Paris in August 2027 is dropped from the timeline, and the Atlas race on 2027-02-28 is placed as the last day of block 3 with brevet preparation and taper running after it, which is the wrong chronology for a peak event. Block 1 changes mainly in its rationale while its weeks 3 to 7 are essentially unchanged, and past sessions carry estimatedFtpWatts of 0 instead of null.

Mistral Large

8.8/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	40.8 s	$0.0877	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00684	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.2/2 · Design 1.8/3 · Rationale 1.1/2 · Grounding 0.7/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and correctly keeps the planned Friday gym session at moderate intensity, 45 minutes, 220 W FTP and an estimated TSS of 30, with the status left as planned since nothing has been recorded today. The exercise list is specific with sets, reps, rest and cues, and it draws on the athlete's lat pulldown progression and the coach's rest and heart-rate feedback. Weaknesses: the suggested rack pull load of about 50 percent of body weight is aggressive for an athlete with a recent back problem who has been told to stay conservative, and the description lacks explicit stop conditions or an RPE target. Season revision: The season now names the Atlas Mountain Race on 28 February 2027 as the primary objective, block 1 starts on 2026-10-21, and the season blocks tile correctly through 2027-08-31 with PBP preserved. However, block 1 is barely changed: its weeks and targetLoad text are essentially the supplied ones, and Atlas appears only in rationale text, with no Atlas-specific taper or recovery after the race. Today's session invents completion data (30 minutes done, 124 bpm average, conversational effort) that the input never supplied, which is a serious grounding failure. Several rationales also describe the revision itself (for example Week 2 is adjusted conservatively), and the contract carries extra top-level keys.

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "This session builds your hip-hinge mechanics and posterior-chain resilience while protecting your lower back. After a 10-minute dynamic warm-up (bodyweight squats, cat-cow, hip openers, and banded shoulder dislocations), complete:\n\n1. Elevated Rack Pulls (or Trap-Bar Pulls) – 3 sets x 8 reps at a light-to-moderate load (start with ~50% of your body weight or the empty bar if new to the movement). Focus on a flat back, controlled eccentric, and full hip extension. Rest 90–120 sec between sets, letting your heart rate drop below 110 bpm.\n\n2. Bodyweight Split Squats – 2 sets x 8 reps per leg, emphasizing slow eccentric control and a tall torso. Rest 60 sec between sets.\n\n3. Lat Pulldowns – 3 sets x 10 reps at 50–60% of your 1-rep max (or ~40–50 kg based on your Week 1 progression). Keep your shoulders packed and avoid shrugging. Rest 60 sec.\n\n4. Pallof Press (Anti-Rotation) – 3 sets x 10 reps per side with a moderate band or cable resistance. Hold each rep for 2 sec at full extension. Rest 45 sec.\n\n5. Plank with Shoulder Taps – 3 sets x 20 sec, focusing on minimal hip rotation. Rest 30 sec.\n\nFinish with your 8-minute daily hip/spine mobility circuit: couch stretch (90 sec/side), standing forward fold (90 sec), 90/90 hip rotations (90 sec/side), deep squat hold (90 sec), supine figure-4 stretch (90 sec/side), and cat-cow (60 sec).",
    "optional": false,
    "optionalRationale": "Skipping this session would delay your hip-hinge and posterior-chain resilience, which are critical for eliminating back pain on long climbs and reducing saddle discomfort. The elevated rack/trap-bar pulls and split squats directly address your lower-back vulnerability and upright cycling posture, while the core anti-rotation work (Pallof press) stabilizes your torso for more aerodynamic, pain-free riding. Missing this session would leave your back and hips unprepared for the weekend’s 2-hour hike and the progressive loading in Week 2."
  }

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue,
while preparing for the controlled introduction of threshold work in Week 3.",
    "rationale": "The block remains seven weeks long, starting on 2026-10-21, with Week 1 now aligned to the
actual 19-25 October week and its higher realized load. The three-hour race, additional activity, strength
and pole-vaulting session, and long hike produced approximately 587 TSS, so Week 2 is adjusted
conservatively to avoid stacking fatigue. Aerobic work is capped below 140 bpm, cadence must begin above 85
rpm from the first minute of every ride, and strength sessions are logged separately. Week 3 introduces one
controlled threshold stimulus only if Week 2 demonstrates stable aerobic execution. The 225 W FTP baseline
is retained because no fresh threshold test or sustained power evidence justifies a change. The block
prepares you for the winter cross-training phase while ensuring you arrive at the Atlas Mountain Race with
durable aerobic fitness and efficient pedaling.",

    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control, closing with a short
easy run to maintain running durability at minimal cost.",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a 30-minute run rather than a make-up ride. The run maintains running-specific durability
that supports your cycling base through the winter and costs almost nothing in fatigue the day after a 2 h
05 min hike. Missed minutes are not recovered, and the week's remaining priority — cadence above 85 rpm from
the first minute of every ride — carries into Week 3, because repeatable efficiency at low intensity is what
carries you through 200 km in April and the Atlas Mountain Race in February.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this session would mean losing the running-specific durability that
supports your cycling base through the winter. While the cost is small, it is not negligible: maintaining
running fitness now ensures you can use it as cross-training during the winter block without risking injury
or excessive fatigue.",

8.8/12.5

Thinking Machines: Inkling

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	136.3 s	$0.1020	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00609	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 1.5/3 · Rationale 1.1/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session with the right date, enum values, and bikeWorkout null, and it reflects the plan's Gym Strength B hinge and split squat focus with the athlete's requested specificity of exercises, sets and reps. However, it adds a 3x10 Pallof press and 3x12 glute bridges that are not clearly in the plan's Strength B outline, and the 30 kg pull load is an invented assumption not flagged as such. The optionalRationale and description are well tied to the athlete's back, sit-bone, and fat-loss goals, though the description lacks explicit stop conditions or fallback for back pain. Season revision: The output names Atlas in the season goal, block 3 focus and the week rationale, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null as required. However, block 1 is barely changed: its weeks are identical to the supplied plan and only the rationale gained a sentence, so the requested genuine revision is weak. The season never extends to Paris-Brest-Paris in August 2027, which is only mentioned in prose, and the block rationale contains meta-commentary about what remains unchanged. Past-day sessions are reasonably described and today's session is coherent with the athlete's constraints, but the Thursday missed session is typed as workout with intensity rest, which is inconsistent. Hard gates failed: block 1 is unchanged.

{
  "season": {
    "goal": "Build durable aerobic endurance, efficient cadence, and low-load strength through winter, peak
for the Atlas Mountain Race on 28 February 2027, complete the 200 km brevet in April 2027, and prepare for
Paris-Brest-Paris in August 2027, while respecting a maximum four-month window of disciplined training.",
    "rationale": "The season runs from 21 October 2026 to 4 April 2027, covering the base, winter build,
Atlas Mountain Race peak, brevet-specific preparation, and taper. Your survey response confirms the Atlas
Mountain Race (28 February) as the first major peak, followed by the 200 km brevet in April and Paris-Brest-
Paris in August. Because you have maintained disciplined progress for no more than four months at a time,
the plan is structured in focused phases with strict heart-rate caps, cadence targets, and a planned deload
in Week 4, so fatigue does not accumulate before the February race. The winter block preserves cycling
specificity through indoor endurance and limited threshold work, uses skiing and easy running for cross-
training durability, and avoids concurrent high-load strength. The build phase then progresses sustained
power and long endurance riding, followed by brevet-specific pacing, fueling practice, and back-to-back
load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness. The 225 W FTP is retained as the baseline; no fresh threshold evidence supports a change.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change. Given your stated four-month discipline ceiling, this base
phase is kept to seven focused weeks with built-in deload, so you reach the Atlas Mountain Race on 28
February with durable fitness rather than accumulated fatigue.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race in
February.",

Google: Nano Banana Pro (Gemini 3 Pro Image Preview)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	A	C	65.0 s	$0.1484	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00635	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.6/3 · Rationale 1.3/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean, contains only the today object, and matches the planned 45-minute moderate gym session dated 2026-10-30 with correct indoor flags, FTP, and TSS. The exercise selection is sensible for rebuilding hip hinge control and core stability, with sets, reps, rest, and a heart-rate cue, but it gives no load progression or RPE guidance and describes the weight only as light-to-moderate. The rationale ties the session to back pain and saddle comfort but does not clearly state what the athlete loses by skipping it, and the description does not use the known gym access or the weekly plan's specific Gym B cues beyond the basics. Season revision: The candidate names Atlas throughout the season and block, keeps block 1 starting on 2026-10-21, and tiles the later blocks without gaps through 2027-04-04. However, it silently drops Paris-Brest-Paris in August 2027 from the season goal and dates, and the season ends in April, so the athlete's stated long-term target is missing. It also returns ten top-level keys instead of the eight requested, gives past sessions non-null estimatedFtpWatts values, and rewrites today's supplied description and empties its alternatives even though no activity was recorded today. The current week and today's session are coherent and concrete, with sensible indoor timing and heart-rate caps, but the season design is incomplete.

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.3/3 · Rationale 1.4/2 · Grounding 1.7/2 · Detail 1.2/2

Judgment: The JSON is clean, contains only the today object, and matches the planned 45-minute moderate gym session dated 2026-10-30 with correct indoor flags, FTP, and TSS. The exercise selection is sensible for rebuilding hip hinge control and core stability, with sets, reps, rest, and a heart-rate cue, but it gives no load progression or RPE guidance and describes the weight only as light-to-moderate. The rationale ties the session to back pain and saddle comfort but does not clearly state what the athlete loses by skipping it, and the description does not use the known gym access or the weekly plan's specific Gym B cues beyond the basics.

    "description": "Focus on safe posterior-chain loading and single-leg control to complement Tuesday's
squat session. Keep the effort controlled and take full rest periods to manage fatigue.\n\n**Warm-up:**
Perform your daily 8-minute hip/spine mobility routine if not yet done.\n\n**Main Workout:** Complete the
following exercises. Take 90–120 seconds of rest between sets, ensuring your heart rate drops below 110 bpm
before starting the next set.\n\n1.  **Elevated Rack Pull or Trap-Bar Deadlift (Knee-Height):** 3 sets of 8–
10 reps. Use a light-to-moderate weight. Focus on a flat back, hinging at the hips, and driving through your
heels to stand tall. Do not pull from the floor.\n2.  **Bodyweight Split Squat:** 2 sets of 10–12 reps per
leg. Control the descent, keeping your torso upright and front heel planted. (Limited to 2 sets to manage
quad fatigue).\n3.  **Seated Cable Row or Dumbbell Row:** 3 sets of 10–12 reps. Focus on squeezing your
shoulder blades together with a controlled release.\n4.  **Dead Bug (Core):** 3 sets of 10–12 reps per side.
Keep your lower back pressed firmly into the floor and move slowly and deliberately.\n\n**Cool-down:**
Gentle stretching for hamstrings, glutes, and quads.",
    "optional": false,
    "optionalRationale": "This session is essential for safely rebuilding the hip hinge mechanics and core
stability necessary to prevent back pain on the bike, balancing the load from Tuesday's squat-focused
workout."

z-ai/glm-4.5-air

Z.ai: GLM 4.5 Air

8.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	144.6 s	$0.0125	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00636	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.8/2 · Design 1.4/3 · Rationale 0.9/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and 220 W FTP, so the contract and fidelity are solid. The exercise list is specific with sets, reps and rest, and it respects the hinge and split-squat limits from the block plan. However, it drops the goblet squat progression that the week plan explicitly says to hold at three sets, and it adds bodyweight work the athlete finds boring without comment. The rationale ties the session to back safety and hip hinge rebuilding, but says little about the fat-loss target or weekly load, and the 40-50 kg rack pull starting load is an unflagged assumption. Season revision: The season was refreshed credibly: it names Atlas, adds an Atlas build block ending 28 February 2027, keeps the April brevet and a Paris-Brest-Paris build, and the blocks tile to the new season end. However, the current block is effectively unchanged from the supplied version, with the same name, focus, rationale and weeks, so the required genuinely changed block 1 is not delivered and Atlas appears nowhere in it. The block rationale also uses meta phrasing such as remain unchanged, and the Atlas build has no explicit taper before the race. The current week and today's session are sensible and consistent with the supplied data, and the empty bodyMetrics and null tomorrow, nextWeek and nextBlock are handled correctly. Hard gates failed: block 1 is unchanged.

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

8.7/12.5

Google: Nano Banana 2 (Gemini 3.1 Flash Image)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	16.6 s	$0.0274	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00612	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.3/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON contract is valid with the correct date, planned status, workout and moderate fields, and the 45-minute duration matches the week plan for the Friday gym session. The design is sensible: split squats, elevated trap-bar pulls, Pallof presses and planks follow the block's hinge-safe progression, and rest guidance is given. However the prescription deviates from the plan by using 3 sets of pulls and 3 sets of split squats where the plan caps split squats at 2 sets, and it omits the explicit set-level load guidance the athlete asked for, while the rationale is reasonably grounded in the back-pain goal but does not mention the fat-loss or hunger considerations for the session. Season revision: The response is valid, keeps the eight top-level keys, keeps block 1 starting on 2026-10-21, keeps the next week and next block null, and tiles the season contiguously through 2027-08-22 with the Atlas race named in the season goal and in the block 2 name. However, block 1 is essentially the supplied block with only its rationale reworded, its weeks are unchanged, and it contains meta-commentary about what remains unchanged, so the required genuine change to the current block is weak. The current week and today's session also show no Atlas-specific adaptation, and the four-month training ceiling is handled only by generic deload language rather than an explicit reset plan. Grounding is good, using the supplied FTP, weather, and activity history without invented metrics. Hard gates failed: block 1 is unchanged.

{
  "season": {
    "goal": "Train for long-distance cycling, starting with the Atlas Mountain Race on 28 February 2027,
followed by a randonneur brevet series including a 200 km in April, and culminating in Paris-Brest-Paris in
August 2027. The plan must manage fatigue carefully to support consistent progress beyond your typical four-
month limit.",
    "rationale": "The season goal is updated to reflect your entry into the Atlas Mountain Race (AMR) in
February 2027 and Paris-Brest-Paris (PBP) in August 2027, alongside the April brevet series. This requires a
significant shift in focus: AMR is a self-supported off-road ultra-endurance event, demanding specific
technical skills, bike handling, and extreme durability, while PBP is a 1200 km road randonnée. The plan now
prioritizes building a massive aerobic base and strength foundation through the autumn, followed by AMR-
specific preparation (off-road riding, loaded bike handling, multi-day fatigue management) in the winter.
Post-AMR, the focus shifts to road-specific randonneuring skills, pacing, and fueling for the brevet series
and PBP. To address your history of maintaining progress for only four months, the progression is
conservative, with regular deload weeks and a strong emphasis on recovery and managing non-training stress,
ensuring you build sustainable fitness for this ambitious multi-event season.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose, with all recorded aerobic efforts staying
under the 140 bpm ceiling, despite the lack of cadence-specific cycling. Tuesday and Friday strength
sessions were completed, along with a Wednesday rowing/running double. Thursday's ride was missed, and
Saturday's planned 90-minute trainer ride was substituted with a 2 h 05 min hike at 114 bpm average. Fatigue
remains low, and the week closes with a short, controlled run rather than a make-up ride. Missed minutes are
not recovered, and Sunday is kept deliberately short to ensure you arrive fresh for Week 3's first
controlled threshold stimulus. The 30-minute run maintains running-specific durability at minimal cost. The
priority of cadence above 85 rpm from the first minute of every ride carries into next week, as repeatable
efficiency is crucial for your long-distance goals.",

openai/gpt-5.6-luna-pro

8.7/12.5

OpenAI: GPT-5.6 Luna Pro

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	69.6 s	$0.0352	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00577	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.8/2 · Design 0.9/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, and a gym workout consistent with the week plan's Friday Gym Strength B. The exercise list follows the plan (elevated pulls, two split squat sets, Pallof, planks, lat pulldowns) and rest and heart-rate guidance match the coach replies, though the description gives 3 sets of split squats rather than the 2 bodyweight sets the plan caps. The rationale ties the session to posterior-chain and posture goals and the brevet season, but it does not state a concrete cost of skipping beyond general statements, and it omits the planned 2-set cap in the explanation. Load guidance for pulls and pulldowns is somewhat vague, and the description includes a treadmill warm-up that is reasonable given the gym access. Season revision: The block 1 start date of 2026-10-21 is kept, the blocks tile correctly, tomorrow, nextWeek and nextBlock stay null, and the week has seven sessions with a matching today entry. However, the season was not truly re-planned for the new goal: the endDate remains 2027-04-04 with a taper placed after the Atlas Mountain Race on 28 February 2027, which is chronologically wrong, and Paris-Brest-Paris in August 2027 is absent from the season. Atlas appears only in the block 3 focus and the season goal text, and block 1 is largely the prior block with light edits to weekly targets. The current week and today's session are coherent, grounded in the logged activities and the 140 bpm and cadence cues, but they are generic outline-level detail for a rider who asked for power targets.

qwen/qwen3.5-397b-a17b

8.7/12.5

Qwen: Qwen3.5 397B A17B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	B	56.8 s	$0.0540	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00647	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.6/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid and the date, planned status, indoor flags, 45-minute moderate workout, 30 TSS, 220 W FTP and null bikeWorkout all match the plan, though it adds an extra rationale field inside today. The session is weak on prescription: it names only elevated rack or trap-bar pulls and two split-squat sets with no reps, loads, or other exercises, despite the athlete asking for very specific gym sets and reps. The rest, heart-rate cue and mobility follow-up are grounded in the recent feedback, but the description lacks load guidance, RPE or stop conditions and fallbacks. Season revision: The output is valid JSON with the correct top-level keys, seven current-week sessions, a correctly tiled season, and tomorrow, nextWeek and nextBlock correctly null, and it names Atlas in the season, a block name and the block 3 focus. However, block 1 is barely changed: its name, focus, dates and all seven week rows are identical to the supplied plan, with only the block rationale rewritten, which weakly meets the requirement for a genuinely changed block 1. The Atlas build block ends on race day (2027-02-28) with no taper before the event, even though the season rationale claims every event has a taper, and the plan does not address the four-month sustainability limit with an explicit reset. Past sessions also carry non-null estimatedFtpWatts values where the instructions require null. Hard gates failed: block 1 is unchanged.

    "bikeWorkout": null,
```

```
    "description": "Gym Strength B session focusing on elevated knee-height rack pulls or trap-bar pulls to
safely rebuild your hip hinge without overloading your lower back, plus two bodyweight split-squat sets to
maintain leg strength while your quads recover from Tuesday's goblet squats. Take 90-120 seconds rest
between sets so your heart rate drops below 110 bpm before each set. Complete your 8-minute hip and spine
mobility circuit after the workout.",
    "optional": false,
    "optionalRationale": "This session builds posterior-chain resilience and hip-hinge mechanics essential
for your cycling posture and back health. Skipping it delays your ability to handle longer rides without
lower-back ache and reduces the strength foundation needed for your spring tour races and Paris-Brest-Paris
goal.",
    "rationale": "Following your strong execution of Tuesday's Gym Strength A where you completed all three
goblet squat sets with manageable quad burn, Friday's Gym Strength B continues your twice-weekly strength
rhythm while protecting your lower back through elevated pulling movements. This fits your Autumn Re-Entry
block's focus on conservative gym strength with safe hinge progression, supporting your fat-loss goal
through moderate-intensity work that won't trigger evening hunger spikes, and building the core stability
you need to eliminate back pain on long climbs."

  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, then a 200 km brevet in April 2027, and
Paris-Brest-Paris in August 2027. Build sustainable training habits that can be maintained for up to 4
months at a time, with aerobic durability, efficient cadence, and strength to handle long-distance cycling
and varied terrain.",
    "rationale": "The season spans from October 2026 through August 2027 to cover three major events: Atlas
Mountain Race (late February), a 200 km brevet (April), and Paris-Brest-Paris (August). Given your history
of maintaining disciplined training for a maximum of 4 months, the plan uses shorter training blocks with
built-in consolidation periods to sustain progress without burnout. The first block emphasizes aerobic
consistency and cadence efficiency before introducing threshold work. Winter months preserve cycling while
using skiing and running for cross-training durability. Each event has dedicated preparation and taper
phases, with volume reductions of 40-50% before key races while retaining brief intensity for readiness.",

8.7/12.5

Google: Nano Banana Pro (Gemini 3 Pro Image)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	C	49.1 s	$0.1380	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00650	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid, uses the requested today object, and matches the planned 45-minute moderate indoor gym session with 30 TSS, 220 W FTP, and the outdoor and bikeWorkout flags set correctly. The session follows the block plan well: elevated rack or trap-bar pulls replace floor deadlifts, split squats are capped at two sets, and the 90-120 second rest and heart-rate recovery cue are concrete. Weaknesses are that the core circuit round count is vague, no loads or RPE guidance are given for the pulls, there is no stop condition for back pain, and the warm-up mentions an elliptical not in the athlete's listed equipment. The rationale ties the session to hinge rebuilding and fat loss but stays fairly generic about the loss from skipping. Season revision: The candidate names Atlas in the season goal, block rationale and today rationale, keeps block 1 starting on 2026-10-21, and changes weeks 3 to 7 of the block, so the core checks pass. The season is badly built: the blocks stop at 2027-04-11 while the season endDate is 2027-08-31, leaving April to August untiled, and Paris-Brest-Paris and the brevet series are absent. The AMR Race and Recovery block starts 2027-02-22, before the 28 February race, and no taper precedes it. The current week and today's session are coherent, with correct dates, seven sessions and a dropped alternatives array on today, but the rationale is partly generic.

deepseek/deepseek-v3.1-terminus

8.6/12.5

DeepSeek: DeepSeek V3.1 Terminus

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	122.4 s	$0.0102	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00638	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.2/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, with the correct date, planned status, gym workout type, 45 minutes, indoor flags, FTP of 220 W and TSS of 30 consistent with the plan. The exercise list is sensible for the hinge and core goals and reflects the two-set split squat cap and knee-height pulls. However, it gives no load progression, no RPE or rep-in-reserve guidance, and omits the heart-rate-below-110 rest cue the athlete's coach has repeatedly asked for, and the rationale claims the session builds hip flexibility, which a strength session does not directly address. Season revision: The season was rebuilt around Atlas on 28 February 2027 with Paris-Brest-Paris kept in August, and the blocks tile contiguously from 2026-10-21 to 2027-08-31 with block 1 still starting on 2026-10-21. Block 1 is barely changed, though: its weeks are copied from the supplied plan and only its rationale was reworded to mention Atlas, so the required genuine change is weak. The current week and today's run do not reference Atlas at all, and the plan runs structured training for roughly five months before the brevet series, which exceeds the athlete's stated four-month ceiling despite the rationale citing it. The JSON contract, null handling for tomorrow and next items, and FTP and bodyMetrics handling are correct.

SEASON REVISION

7.2/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
104.6 s	**$0.00587**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.2/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 0.9/2

Judgment: The season was rebuilt around Atlas on 28 February 2027 with Paris-Brest-Paris kept in August, and the blocks tile contiguously from 2026-10-21 to 2027-08-31 with block 1 still starting on 2026-10-21. Block 1 is barely changed, though: its weeks are copied from the supplied plan and only its rationale was reworded to mention Atlas, so the required genuine change is weak. The current week and today's run do not reference Atlas at all, and the plan runs structured training for roughly five months before the brevet series, which exceeds the athlete's stated four-month ceiling despite the rationale citing it. The JSON contract, null handling for tomorrow and next items, and FTP and bodyMetrics handling are correct.

openai/gpt-4.1

OpenAI: GPT-4.1

8.6/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	19.5 s	$0.0799	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00599	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.9/2 · Design 0.9/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate returns only the requested today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, FTP 220 W and TSS 30, matching the plan's Friday gym session. The exercise list is sensible for the back-protective Gym B focus, with specific sets, reps, rest, and a heart-rate cue drawn from the coach feedback. Detail is limited: there is no load guidance for the elevated pulls, no RPE or rep-in-reserve targets, and no fallback if the athlete reports back pain. The rationale ties the session to the back and saddle problems, though it stays somewhat generic about the block's loading goal. Season revision: The response keeps block 1 starting on 2026-10-21, tiles the later blocks through 2027-04-04, leaves tomorrow and the next levels null, and gives seven sessions with a detailed easy run for today. However, Atlas appears only in the season goal and block rationale, while the season shape, block names, and taper still target the April 200 km brevet and end on 2027-04-04, after the Atlas date of 28 February 2027, so the plan does not really build toward the new primary goal. Block 1 weeks are essentially unchanged from the supplied plan, the rest of the season ignores the four-month maintenance ceiling, and bodyMetrics returns nulls instead of an empty array. Hard gates failed: block 1 is unchanged.

TODAY PLAN

google/gemma-4-31b-it

8.5/12.5

Google: Gemma 4 31B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	70.8 s	$0.00421	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00619	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 1.0/2 · Design 1.0/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned Friday gym session on 2026-10-30 in date, duration, intensity, TSS, FTP and indoor flags. The exercise list is sensible and follows the block's hinge progression, with rest caps tied to the athlete's heart-rate guidance and the 3 rack-pull and 2 split-squat sets from the plan. Weaknesses are vague load guidance ('a weight that feels moderate' with no RPE or progression), no fallback for pain or missing equipment, and a rationale that does not name the week's target load. Season revision: The response keeps block 1 starting on 2026-10-21, tiles the later blocks with no gaps, and names Atlas in the season goal and block 3 focus, so the mechanical checks pass. However, the season puts the Atlas race on 28 February 2027 at the end of block 3 with no Atlas taper, and the brevet taper and race readiness blocks are placed after Atlas, so the race-readiness logic is inverted. Block 1 is almost unchanged from the supplied version apart from its rationale, and the current week and today's session are essentially the supplied ones with no Atlas-specific preparation. The season also ignores the athlete's four-month ceiling by running a 21-week PBP block without a reset, and the output adds coachQuestion and modelsRemarks keys beyond the eight requested top-level keys.

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	97.3 s	$0.0264	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00634	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.7/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, uses the correct date, planned status, moderate 45-minute workout, indoor flags, and the 220 W FTP, and matches the week's Friday gym slot. The exercise selection follows the plan's hinge and split-squat limits and gives explicit sets, reps, rest, and a back-discomfort fallback, though the pull load is left as moderate without a concrete starting reference. The rationale ties the session to posterior-chain resilience and sit-bone pressure, but the closing line that missing one session is manageable sits awkwardly with the optional false setting. Season revision: The response is valid, keeps block 1 starting on 2026-10-21, gives seven week sessions and names Atlas in the season goal and block rationale. However, block 1 is essentially unchanged in name, focus and week structure, and the season dates still end on 2027-04-04 with no Paris-Brest-Paris block, no build or taper keyed to the 28 February Atlas race, and no response to the four-month training ceiling. Past sessions carry estimatedFtpWatts of 0 instead of null, and today's workout title and description were rewritten rather than kept with a completion note.

Judgment: The JSON is valid, uses the correct date, planned status, moderate 45-minute workout, indoor flags, and the 220 W FTP, and matches the week's Friday gym slot. The exercise selection follows the plan's hinge and split-squat limits and gives explicit sets, reps, rest, and a back-discomfort fallback, though the pull load is left as moderate without a concrete starting reference. The rationale ties the session to posterior-chain resilience and sit-bone pressure, but the closing line that missing one session is manageable sits awkwardly with the optional false setting.

RETURNED JSON

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B — Elevated hinge & split-squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Purpose: build safe hip-hinge mechanics and unilateral leg control to protect your lower back on long rides and improve saddle comfort while adding muscle-preserving strength that supports steady fat loss. Warm-up (10 min): 8-minute daily hip/spine mobility circuit + 2–3 minutes easy aerobic (bike/row) and 2 sets of very light bodyweight hip hinges. Main (30 min): 1) Elevated knee-height rack or trap-bar pulls — 3 sets x 5 reps, moderate load focused on a flat back and controlled descent; rest 90–120 seconds between sets and only start the next set once heart rate has dropped below ~110 bpm. 2) Bodyweight split
```

```
squats — 2 sets x 8 reps per leg, slow controlled tempo, full balance focus. 3) Glute bridges — 3 sets x 12
reps (easy/moderate) to load the posterior chain without heavy spinal compression. 4) Pallof press — 2 sets
x 10 reps per side for anti-rotation core stability. Cool-down (5 min): light mobility and breathing, then
your 8-minute hip/spine mobility circuit. Execution notes: keep loads conservative (technical form over
weight), leave 1–2 reps in reserve on every set, take the full 90–120 s rest so HR falls toward 90–110 bpm
before each set to protect your back. If any low-back discomfort occurs, reduce load or substitute lighter
block/trap-bar pulls and increase mobility time.",
    "optional": false,
    "optionalRationale": "This session specifically trains posterior-chain resilience, hip-hinge motor
control, and unilateral stability that reduce back pain and sit-bone pressure on long rides; skipping it
delays rebuilding the safe hinge pattern and posterior strength we need before increasing cycling volume,
and repeated misses would slow your fat-loss progress by reducing muscle-preserving stimulus. Missing a
single session is manageable, but keep at least one gym strength session this week to retain progress."
  }
}
```

SEASON REVISION

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 1.1/3 · Rationale 1.2/2 · Grounding 1.5/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate matches the required date, planned status, gym workout type, 45-minute duration, moderate intensity, indoor flag, 220 W FTP and 30 TSS, and its exercise set follows the current week plan with the capped split squats and elevated pulls. The main weaknesses are that optionalRationale is left empty even though the required field should name the adaptation and what is lost by skipping, and the description gives no loads, progression rule, or stop conditions for the rack pulls, split squats or Pallof press. The extra rationale key inside today is a minor contract deviation. Season revision: The output is valid, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null and returns empty bodyMetrics, and it names Atlas in the season goal and in block 3. However, block 1 is barely changed: its name, focus and all seven week entries are identical to the supplied plan, and neither its name, focus nor rationale mentions Atlas. The season tiling has mismatched week counts (the 2027-03-01 to 2027-04-04 block is 5 weeks but is labelled 3, and the PBP block is about 9 weeks but labelled 8) and no taper precedes the Atlas race that ends block 3. The block rationale also refers to the athlete's feedback in meta terms. Today's session is grounded and sensible but is carried over from the old plan without Atlas-specific reasoning. Hard gates failed: block 1 is unchanged.

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

qwen/qwen3.7-max

Qwen: Qwen3.7 Max

8.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	137.4 s	$0.1136	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00626	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.8/2 · Design 1.2/3 · Rationale 0.8/2 · Grounding 1.4/2 · Detail 0.9/2

Combined judgment: Today plan: The candidate matches the planned Friday gym session on date, status, type, intensity, duration, TSS, FTP and indoor flags, and correctly sets bikeWorkout to null. The exercise list is specific, with sets, reps, rest and a heart-rate recovery target that respects the athlete's back and lower-body constraints. It is weaker on execution detail: it gives no load guidance for the pulls or split squats, no RPE or stop conditions, and no fallback if a movement aggravates the back. The rationale ties the session to posterior-chain resilience and cycling posture, but it does not connect to the weekly load target. Season revision: The season is refreshed well: it names Atlas in block 3, keeps block 1 starting on 2026-10-21, and tiles the blocks through 2027-08-29 with Paris-Brest-Paris in the final phase. The current block, however, is returned essentially unchanged from the supplied version, with the same name, focus, dates and week texts, and its rationale still says the content 'remain[s] unchanged', so the required genuinely changed block 1 is missing and the meta-commentary rule is breached. The season also has no taper before the 28 February Atlas finish, and the week and today sessions are sensible and grounded but largely carried over. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

google/gemini-3.1-flash-lite-preview

8.4/12.5

Google: Gemini 3.1 Flash Lite Preview

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	7.8 s	$0.0118	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00636	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.0/2 · Design 1.2/3 · Rationale 1.0/2 · Grounding 1.5/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid and the today object matches the planned Friday gym session: date 2026-10-30, workout, moderate, 45 minutes, indoor, no bikeWorkout, and an FTP of 220 W. The exercise list follows the plan's Gym Strength B (elevated pulls, two split-squat sets) and the coach's 90-120 second rest guidance, with sensible sets and reps. Weaknesses: it gives no load guidance for the pulls, pulldowns or split squats despite the athlete's prior loads being known, no RPE or stop conditions, and the rationale is somewhat generic about hinge adaptation rather than tying it to the back-pain and saddle-pressure goals in concrete terms. Season revision: The response names Atlas in the season goal, season blocks and block 3, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null, so the hard checks pass. However, block 1 is barely changed: the name, focus and week structure are kept, and the detailed weekly targetLoad text is collapsed to single words like High and Moderate, which loses detail. The season has no taper before the 28 February Atlas race, and block 4 runs about six months to August 2027 without a reset, ignoring the athlete's stated four-month ceiling. The rationales often describe the plan as being updated or adjusted, and bodyMetrics contains a null entry even though the input states no body metrics.

tencent/hy3-preview

8.4/12.5

Tencent: Hy3 preview

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	164.5 s	$0.0141	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00574	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.7/2 · Design 0.9/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate keeps the planned Friday gym session with correct date, status, duration, moderate workout intensity, indoor flag and FTP, and it follows the week's hinge and split squat limits from the plan. The main weakness is that the description adds a lat pulldown progression, glute bridges and Pallof work without fully specifying the squat, pull and accessory loads, and the 10 reps per leg and 3 sets of pulls are not tied to the athlete's known 12 kg goblet squat or 50 kg pulldown numbers. The rationale is specific to the back, hips and fat-loss goals, but it slightly overreaches by claiming the session will let you touch the floor, which is not a stated outcome of this session. Season revision: The response names Atlas in the season goal, block rationale, week rationale and today rationale, keeps block 1 starting on 2026-10-21, keeps seven week sessions and leaves tomorrow, nextWeek and nextBlock null, which satisfies the mechanical checks. The main weakness is that the plan was not really re-planned for Atlas: blocks 2 to 5 are copied unchanged, brevet prep still runs to late March 2027 after the Atlas date, and Paris-Brest-Paris in August 2027 is absent because the season still ends on 2027-04-04. Block 1 keeps identical weeks, focus and dates, with only the rationale text changed, so it is not a genuinely changed block. Today's session and week content are concrete, athlete-grounded and consistent with the input, and bodyMetrics is correctly empty. Hard gates failed: block 1 is unchanged.

TODAY PLAN

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Elevated Pulls & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Indoor gym session: 5-minute easy warm-up (e.g., light treadmill walk), then elevated
knee-height rack or trap-bar pulls (light load, 3 sets of 10 reps focusing on flat-back hip hinge), followed
by 2 sets of bodyweight split squats (10 reps per leg). Take full 90–120 seconds of rest between sets so
heart rate drops below 110 bpm before each pull and split-squat set. Include accessory work: 3x12 glute
bridges, lat pulldowns (progress toward ~50 kg for 10 reps), 3x10 per side Pallof press, and 3x30s plank.
Conclude with your daily 8-minute hip and spine mobility circuit (couch stretch/low lunge, forward fold,
90/90 hip rotations, deep squat hold, figure-4 glute stretch, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds posterior-chain strength and core stability that directly
protect your lower back and improve cycling posture for Paris-Brest-Paris, serving the Autumn Re-Entry
block's focus on conservative gym strength and Week 1's target of two multimodal gym sessions for steady fat
loss. The elevated hinge progression safely rebuilds your hip mobility so you can eventually touch the floor
and reduce sit-bone pressure on long rides. If you skip it, your back and hips miss a critical stimulus to
adapt to loaded movement, raising injury risk when early winter fatbike and ski sessions begin and delaying
your path to pain-free endurance cycling."
  }
}
```

SEASON REVISION

6.9/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week. This supports the early-
season goal of durable aerobic base for the Atlas Mountain Race and April brevet, within your maximum four-
month disciplined training window.",

mistralai/mistral-medium-3.1

8.4/12.5

Mistral: Mistral Medium 3.1

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	25.7 s	$0.0155	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00614	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.1/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, has the exact today object with correct date, planned status, workout and moderate enum values, and an estimated FTP of 220 W matching the profile. The session matches the planned Gym Strength B at 45 minutes, and the prescription uses sets and reps, rest periods, heart rate ceilings and a mobility finish that follow the athlete's stated constraints. Weaknesses: the session drops the planned 2-set split squat cap and lists 3x8 rack pulls and 3x10 cable rows that were not in the existing plan, and the 40-50 kg loads are assumed without stating that assumption, while the rationale is reasonably specific but does not mention the weekly 7-8 hour target load. Season revision: The response is valid, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and names Atlas in the season goal and the block rationale. However, block 1 is essentially unchanged: its seven week entries are identical to the supplied plan and nothing in the current week or today's session is adjusted toward Atlas, so the required genuine change to block 1 is weak. The season rationale contradicts its own blocks by describing two 16-week blocks with 3-week tapers when the listed blocks are seven, and it ignores the athlete's stated four-month ceiling by running disciplined training continuously from October to August. The PBP specific block's week count also does not match its dates.

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build durable aerobic fitness, efficient cadence, and low-load strength without stacking
fatigue",
    "rationale": "This block establishes the aerobic foundation and movement efficiency you need for Atlas
Mountain Race, the 200 km brevet, and Paris-Brest-Paris. Your recent training shows good aerobic control
(e.g., 2:25 hilly ride at 137 W, 2 h 05 min hike at 114 bpm) but also fatigue from unplanned high-intensity
work (3-hour Zwift race at 187 bpm HR). The block therefore prioritizes strict heart-rate control (<140 bpm
for aerobic sessions), cadence above 85 rpm on flat riding, and low-load strength to avoid stacking fatigue.
Volume progresses conservatively to 5–6 hours/week by Week 5, with a deload in Week 4 to absorb the load. No
threshold work is introduced until Week 3, and only if Week 2 demonstrates stable execution. The 225 W FTP
baseline is retained as no fresh threshold evidence justifies a change.",

    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 steps per minute. Keep the effort conversational from the
first minute and let pace fall away rather than pushing heart rate up on any incline. Indoors because rain
and 7 m/s gusts are forecast through the day.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this session would forfeit the minimal running-specific durability work
that complements your cycling base, which is critical for maintaining multi-sport fitness through the winter
and into your ultra-endurance events.",

deepseek/deepseek-v4-pro-0813

8.4/12.5

DeepSeek: DeepSeek V4 Pro 0813

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	29.6 s	$0.0226	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00596	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.8/1.5 · Fidelity 0.8/2 · Design 1.0/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, contains only the today object with the correct date, planned status, workout type, moderate intensity, 45 minutes and indoor flags, and the session matches the week plan's Friday Gym entry. The exercise prescription is specific with sets, reps, rest and a stop condition, and it follows the coach's hinge substitution and split squat caps. However, the description adds a 3x8-10 rack pull and lat pulldown at 40-50 kg that the coach notes did not prescribe exactly, and the 2x8-10 split squat volume plus a 3x30 s plank and 5 minute mobility make the 45 minute total only loosely checked. The rationale is grounded in the back and sit-bone problems but does not explicitly reference the week's load target or the fat-loss goal. Season revision: The response names Atlas in the season goal and block rationale, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and grounds today's run and the week in the supplied activities, weather and 225 W FTP. However, the season was not truly re-planned: the blocks still end on 2027-04-04 with the old brevet-and-taper shape, so the season does not build to the Atlas race on 28 February 2027 as a peak nor extend to Paris-Brest-Paris in August 2027, despite naming PBP in the goal. Block 1's name, focus and weeks are essentially unchanged apart from a rewritten rationale, so the block change is thin. The top level also adds coachQuestion and modelsRemarks beyond the eight keys the request asked for. Hard gates failed: block 1 is unchanged.

km brevet in early April 2027, and Paris-Brest-Paris in August 2027, while respecting a four-month
sustainable training limit.",
    "rationale": "The season now targets three long-distance cycling goals: the Atlas Mountain Race on 28
February 2027, a 200 km brevet in early April 2027, and Paris-Brest-Paris in August 2027. Because the
athlete has historically maintained disciplined training for at most four months, the plan is built in
sustainable blocks with regular deloads and cross-training rather than a continuous high-load build. The
first block establishes aerobic durability, cadence efficiency, and low-load strength. The winter block
preserves cycling specificity while using skiing and easy running for durability. The build phase then
progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing
cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining
brief intensity for race readiness.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

8.4/12.5

MoonshotAI: Kimi K2 0711

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	76.1 s	$0.0241	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00635	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.0/2 · Design 1.5/3 · Rationale 1.1/2 · Grounding 0.7/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, and the 45-minute moderate gym workout on 2026-10-30 with 220 W FTP and TSS 30 fits the plan, with outdoor and canBeOutdoor correctly false. The main weakness is that it prescribes bodyweight good mornings even though the athlete explicitly said they cannot go straight to good mornings without getting injured, which is a safety and grounding lapse. The rationale is specific to the sit-bone, posture and back-ache goals, and the sets, reps, rest and heart-rate guidance are concrete, though split-squat and pull loads lack a clear progression or RPE target. Season revision: The season is refreshed with Atlas as the first goal, the blocks tile contiguously through August 2027, block 1 keeps its 2026-10-21 start, and tomorrow and nextWeek and nextBlock stay null. However, block 1 is barely changed: its name and focus are identical to the input and only its rationale gains an Atlas reference, and the season ignores the athlete's four-month training ceiling by running roughly ten months of continuous blocks with no reset. The most serious problem is grounding: the 2026-11-01 run, which was only planned and has no recorded activity, is marked completed with a description claiming you completed approximately 30 minutes, which invents a result. Several rationales also read as commentary on what changed (for example Week 3 now introduces a threshold stimulus), rather than stating the plan as it stands. Hard gates failed: block 1 is unchanged.

Contract 1.5/1.5 · Fidelity 1.8/2 · Design 2.0/3 · Rationale 1.7/2 · Grounding 1.4/2 · Detail 1.6/2

Judgment: The JSON is clean and matches the required today shape, and the 45-minute moderate gym workout on 2026-10-30 with 220 W FTP and TSS 30 fits the plan, with outdoor and canBeOutdoor correctly false. The main weakness is that it prescribes bodyweight good mornings even though the athlete explicitly said they cannot go straight to good mornings without getting injured, which is a safety and grounding lapse. The rationale is specific to the sit-bone, posture and back-ache goals, and the sets, reps, rest and heart-rate guidance are concrete, though split-squat and pull loads lack a clear progression or RPE target.

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Elevated Hinge & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Your second gym session of the week focuses on safe posterior-chain loading and single-leg stability to rebuild your hip hinge without stressing your lower back. After a 5-minute general warm-up (light rowing, cycling, or walking), complete 2 sets of 8 bodyweight good mornings with hands behind head, hinging only to the point where you feel a gentle hamstring stretch while keeping your back flat—stop well before any rounding. Then 3 sets of 8 reps of elevated knee-height rack pulls or trap-bar deadlifts at 40-50 kg, resting 90-120 seconds between sets until your heart rate drops below 110 bpm; focus on driving hips forward and squeezing glutes at the top, never pulling with your lower back. Follow with 2 sets of 8 bodyweight split squats per leg (rear foot elevated on a low step if comfortable), keeping torso upright and front knee tracking over toes. Finish with 3 sets of 10 Pallof presses per side at a moderate cable resistance, and 3 sets of 45-second front planks. Conclude with your 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength and hip mobility that directly enables a more aerodynamic, pain-free cycling posture—eliminating the upright position that causes your sit-bone blisters and back ache on long climbs. The elevated hinge progression protects your injury-prone lower back while teaching proper hip-hinge mechanics; skipping today delays your ability to safely load heavier pulls and squats in coming weeks, leaving you stuck with the same postural limitations that hurt you on the bike. The split squats and Pallof presses develop the single-leg stability and anti-rotation core control that keep your pelvis stable during long rides, reducing back fatigue. You lose a full week of safe hinge adaptation and core-postural development if you skip this."
  }
}

SEASON REVISION

6.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
63.8 s	**$0.0146**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 1.0/2 · Design 1.5/3 · Rationale 1.1/2 · Grounding 0.7/2 · Detail 1.2/2

Judgment: The season is refreshed with Atlas as the first goal, the blocks tile contiguously through August 2027, block 1 keeps its 2026-10-21 start, and tomorrow and nextWeek and nextBlock stay null. However, block 1 is barely changed: its name and focus are identical to the input and only its rationale gains an Atlas reference, and the season ignores the athlete's four-month training ceiling by running roughly ten months of continuous blocks with no reset. The most serious problem is grounding: the 2026-11-01 run, which was only planned and has no recorded activity, is marked completed with a description claiming you completed approximately 30 minutes, which invents a result. Several rationales also read as commentary on what changed (for example Week 3 now introduces a threshold stimulus), rather than stating the plan as it stands.

RETURNED JSON

```
{
  "season": {
    "goal": "Atlas Mountain Race (February 28, 2027), Paris-Brest-Paris (August 2027), and 200 km brevet series completion",
    "rationale": "Your season now targets three distinct endurance events: the Atlas Mountain Race as the first major goal, the 200 km brevet series as preparation and validation, and Paris-Brest-Paris as the culminating event. This demands a longer, more patient progression than a single brevet, with particular attention to your history of maintaining disciplined training for only 4 months at a time. The season therefore builds in deliberate consolidation phases, uses winter skiing and running for aerobic durability without cycling overload, and sequences the blocks so you arrive at each event fresh rather than accumulated. The Atlas Mountain Race in late February requires sustained power over variable terrain and self-sufficiency, while PBP in August demands the deepest aerobic base you have ever built. The brevet series in April serves as both proof of readiness and a controlled rehearsal for the longer events.",

8.4/12.5

Writer: Palmyra X5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	B	64.2 s	$0.0422	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00690	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.0/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean and the today object matches the required date, planned status, workout type, moderate intensity, 45 minutes, indoor gym flags, and the 220 W FTP and 30 TSS from the plan. The session is well grounded in the athlete's recent goblet squat fatigue, back sensitivity and heart-rate rest guidance, with a sensible hinge, core and glute emphasis. However, the split squat prescription is internally inconsistent (it says 2 sets and then 3x8 per leg, while the plan caps split squats at 2 sets), the starting load of 40-50 kg for the pulls is an unflagged assumption, and there are no explicit stop conditions or progression rules. Season revision: The response names Atlas in the season goal and in a block name, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and keeps the seven week sessions correctly dated with today matching. However, block 1 is not genuinely changed: its weeks, focus and targetLoad are copied from the supplied plan and only the rationale is rewritten. The season logic is also flawed: the Atlas race on 2027-02-28 sits at the end of block 3, and the Atlas taper block only starts on 2027-03-01, after the race, so there is no real pre-race taper. Several weekCount values do not match their date spans, the April brevet loses its taper, and the response returns two extra top-level keys beyond the eight requested. Today's session is kept faithfully from the supplied plan, but its rationale and the week do not explicitly tie the aerobic work to the Atlas build. Hard gates failed: block 1 is unchanged.

    "description": "Today's gym session focuses on building safe hip hinge mechanics and core stability
while protecting your lower back and allowing your quads to recover from Tuesday's goblet squats. Perform
elevated rack pulls or trap-bar pulls from knee height with light to moderate load (start at 40–50 kg, 3x8–
10 reps) to reinforce a flat-back hinge without overloading. Follow with 2 sets of bodyweight split squats
(3x8 per leg) with controlled tempo and full range of motion, focusing on hip mobility rather than leg
fatigue. Include 3x12 glute bridges (progressing to feet-elevated if comfortable), 3x10 Pallof presses per
side for anti-rotation core strength, and finish with 3x30-second planks. Take 90–120 seconds of rest
between sets to let your heart rate drop below 110 bpm, ensuring controlled effort and quality movement.
Complete your 8-minute daily hip and spine mobility circuit afterward.",
    "optional": false,
    "optionalRationale": "This session is essential for rebuilding posterior-chain strength and safe hip
hinge mechanics, directly supporting your long-term goal of pain-free, powerful cycling and injury
prevention. Skipping it would delay your progress in developing core and hip resilience, which is
foundational for both fat loss through efficient movement and long-distance comfort on the bike."

    "goal": "Train for long-distance cycling, with the Atlas Mountain Race on February 28, 2027 as the
primary target, followed by Paris-Brest-Paris in August 2027, and a series of randonneur brevets in between
starting with a 200 km in April 2027. Given the athlete’s history of maintaining disciplined training for no
more than 4 months at a time, the season structure prioritizes focused, sustainable blocks with built-in
durability and recovery to avoid burnout.",
    "rationale": "The season now reflects the updated goal: the Atlas Mountain Race is the primary peak,
requiring rugged endurance, climbing resilience, and self-supported durability, followed by a transition to
Paris-Brest-Paris, which demands extreme stamina and pacing over 1200 km. The brevet series in April serves
as a critical intermediate milestone to validate pacing, fueling, and equipment. Given the athlete’s self-
reported limit of 4 months of sustained training, the plan is structured into focused, non-extendable blocks
with deliberate recovery and cross-training to prevent burnout. The progression builds aerobic durability
first, then introduces sustained climbing and load tolerance, followed by event-specific simulations and
tapering. Winter skiing and year-round running support aerobic continuity without overloading the cycling-
specific system.",

qwen/qwen3-235b-a22b-thinking-2507

8.4/12.5

Qwen: Qwen3 235B A22B Thinking 2507

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	100.0 s	$0.0627	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00621	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.8/2 · Design 1.0/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, has the exact today shape, and matches the required date, planned status, moderate 45-minute indoor gym workout, and FTP of 220 W. The session is sensible for the back-protection goal, but it lacks the exercise-level specificity the athlete explicitly asked for: no sets, reps, or loads for the elevated pulls and split squats, and no fallback if the pulls aggravate the lower back. The rationale is concrete and tied to the season goal and sit-bone and back issues, though the detail section would be stronger with load progression and explicit stop conditions. Season revision: The JSON is well formed, block 1 starts on 2026-10-21, tomorrow, nextWeek and nextBlock stay null, and the week and today objects are consistent with each other. The main failure is design: Atlas appears only in the season goal and rationale, while the block plan, block names and week focus never prepare for the 28 February 2027 race, and the season still ends on 2027-04-04 with no Paris-Brest-Paris in August 2027. The season rationale also promises a mid-January deload that no block actually contains, and the block 1 rewrite is minimal, with the block name and most weeks unchanged. The current week and today's session are coherent and well grounded in the logged activities, but they do not serve the new goal.

8.3/12.5

Dots Studio: Dots3-Note Preview (free)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	D	A+	462.8 s	$0	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00621	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.3/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid with the requested today object and correct date, status planned, workout and moderate values, 45 minutes, indoor and non-bike settings, and FTP 220 W. The session is a plausible Gym Strength B with hinge, split squat, glute bridge, Pallof and plank work, and it honours the 90-120 second rest and sub-110 bpm guidance. However, it adds a rationale field that is fine, but the description gives 3 sets of 30-45 second planks and a 3x12 bridge without load guidance, and the split squat and pull loads are not specified against the athlete's known weights. The rationale and optionalRationale are specific to back pain and saddle blisters, but the claim that this is non-negotiable and that skipping causes the ache is overstated, and the session does not explicitly mention the daily mobility circuit or the weather context. Season revision: The response names Atlas in the season goal, the block rationale and the new season blocks, keeps block 1 starting on 2026-10-21, and the season blocks tile correctly. However, the block 1 weeks are essentially unchanged from the supplied plan, so the block is not genuinely re-planned for the Atlas goal. The season drops any taper before the Atlas race, ends in April 2027 without planning anything toward Paris-Brest-Paris in August, and gives the intervening brevet series only a thin treatment. The past Wednesday entry was merged and given a new TSS of 95 and the missed Thursday was retyped as rest, which alters recorded history. Today's session is correctly left as supplied with a rationale that is mostly athlete-grounded. Hard gates failed: block 1 is unchanged.

{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B",
    "type": "workout",
```

```
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Today's session is Gym Strength B, a 45-minute routine targeting posterior chain and
core stability. Begin with a 5-minute warm-up including light cardio and dynamic stretches. Perform 3 sets
of 10 reps of elevated knee-height rack or trap-bar pulls, focusing on a flat-back hip hinge and taking 90-
120 seconds of rest between sets to keep your heart rate below 110 bpm. Follow with 2 sets of 10 reps per
leg of bodyweight split squats, controlling the tempo. Complete 3 sets of 12 glute bridges, 3 sets of 10
reps per side of Pallof press for anti-rotation core strength, and 3 sets of 30-45 second planks. Finish
with a 5-minute cool-down stretching your hips and lower back. This specific combination of exercises builds
the core and hip strength needed to eliminate your back pain on climbs and prevent saddle blisters on long
rides.",
    "optional": false,
    "optionalRationale": "Skipping this session means losing the critical stimulus for posterior chain and
core stability, which directly causes the lower-back ache on long climbs and the saddle discomfort from your
upright position. Without this progressive loading, your hip flexibility and back resilience will stagnate,
increasing injury risk during the upcoming winter base and spring brevet series. This session is non-
negotiable for building the pain-free, durable foundation required for your 200 km brevet and Paris-Brest-
Paris goals.",
    "rationale": "Today's Gym Strength B session is a cornerstone of your Autumn Re-Entry block, designed
specifically to address your lower-back vulnerability and hip flexibility deficits. By focusing on elevated
knee-height rack pulls and controlled split squats, we safely rebuild your posterior chain and hip stability
without the heavy spinal loading that previously caused injury. This directly supports your primary goals of
fat loss and core strength, ensuring you can comfortably handle long bike rides and climbs without saddle
discomfort or back pain. Skipping this session would stall your critical back-protection adaptations and
delay your progress toward a pain-free, powerful cycling posture for Paris-Brest-Paris."
  }
}
```

SEASON REVISION

qwen/qwen3.7-flash

8.3/12.5

Qwen: Qwen3.7 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	112.8 s	$0.00288	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00626	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.2/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object with correct date, planned status, workout and moderate enums, 45 minutes, indoor flag and FTP 220 W, matching the current week's Friday gym session. The exercise set is specific with sets and reps and a rest rule, and it respects the plan's goblet squat, pull and split squat caps, though it adds a Pallof press and plank that were not in the week plan and the 3 x 10 goblet squat and 3 x 8 pulls go beyond the prior feedback that squats should stay at 12 kg with reduced volume. The rationale is grounded in the block focus and the hinge and core goals but leans on generic phrases about metabolic control, and the description omits fallbacks for pain or equipment limits and load progression guidance. Season revision: Atlas appears in the season goal and in block 1's rationale, and block 1 still starts on 2026-10-21 and the later blocks tile contiguously to the season end. However, block 1's name, focus, dates and weeks are copied unchanged, so it is not genuinely revised, and no block name or focus after block 2 names Atlas, while block 3 ends on race day with no taper. The plan also runs roughly four and a half months without a reset before Atlas, past the athlete's stated four-month ceiling. Past sessions carry an estimatedFtpWatts of 225 where the contract requires null, and the response returns ten top-level keys rather than the eight requested. Hard gates failed: block 1 is unchanged.

{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Hinge, Split-Squat & Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Indoor gym session focused on safe posterior-chain development and core anti-rotation.
Complete the following circuit three times, resting 90–120 seconds between sets to let your heart rate drop
below 110 bpm before each lift. Warm up with 5 minutes of cat-cows, bird-dogs, and glute bridges. Main
lifts: (1) Goblet Squat at 12 kg for 3 × 10 reps, focusing on controlled depth and an upright torso; (2)
Elevated knee-height rack or trap-bar pulls for 3 × 8 reps, emphasizing a flat-back hip hinge and driving
through the heels; (3) Bodyweight split squats for 2 × 8–10 reps per leg, prioritizing balance and a smooth
descent; (4) Pallof press for 3 × 10 reps per side to build rotational core stability; (5) Plank for 3 × 30
seconds to reinforce anterior core endurance. Finish with 5 minutes of gentle hamstring and hip flexor
stretching.",
    "optional": false,
    "optionalRationale": "This session directly supports the Autumn Re-Entry block's focus on conservative
gym strength and safe hinge progression, aligning with this week's target load of introducing multimodal
foundation work. Skipping it delays the posterior-chain and core-stability adaptations required to maintain
a pain-free cycling posture over increasing ride durations. Without this targeted loading, your lower back
remains vulnerable to fatigue on longer weekend rides, and you lose the structured metabolic control that
keeps evening hunger manageable during this fat-loss phase."

  "season": {
    "goal": "Complete the Atlas Mountain Race (February 28, 2027), followed by a randonneur brevet series
including a 200 km event in April 2027, and Paris-Brest-Paris in August 2027. Structure training into
disciplined blocks of up to four months with dedicated recovery periods to manage fatigue and sustain long-
term progress.",
    "rationale": "The season now spans from October 2026 through August 2027, anchored by the Atlas Mountain
Race in late February, a 200 km brevet in April, and Paris-Brest-Paris in August. Given your history of
sustaining disciplined training for a maximum of four months, the season is divided into focused blocks
separated by explicit recovery and transition phases. This prevents burnout, allows physiological
adaptation, and ensures you peak appropriately for each major event. The initial winter block builds aerobic
durability and strength, followed by a threshold-focused block ending precisely on race day for the Atlas
Mountain Race. A three-week recovery block bridges to the April brevet, which then transitions into a longer
endurance phase for PBP, complete with tapered peaks for each target.",

#103

qwen/qwen3-235b-a22b-2507

8.3/12.5

Qwen: Qwen3 235B A22B Instruct 2507

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	186.0 s	$0.00721	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00609	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 30 TSS and 220 W FTP, matching the current week's Friday gym slot. The exercise selection follows the plan's hinge progression with knee-height pulls, capped split squats, glute bridges, Pallof presses and planks, and it correctly reflects the 110 bpm recovery cue from recent feedback. The rationale ties the session to back protection and fat-loss consistency but is somewhat generic and does not spell out the week's target load or the aerobic benefit. Detail is limited: no load guidance or RPE/rep-in-reserve targets for the pulls and split squats, no stop condition for back or hip pain, and no fallback if the knee-height pull setup is unavailable. Season revision: The season goal text names the Atlas Mountain Race and Paris-Brest-Paris, and block 1 keeps its 2026-10-21 start, so the mechanical checks pass only narrowly. However, the season blocks after block 1 are carried over unchanged and the season still ends on 2027-04-04, so the plan never builds toward Atlas on 28 February 2027 and never extends to Paris-Brest-Paris in August 2027. Block 1 is barely changed: its weeks and focus are the same as before and the block rationale never mentions Atlas. The week and today sessions are coherent and grounded in the logged activities, with the 30-minute indoor run fitting the forecast, but the outline days and today carry null estimatedFtpWatts where the instructions require estimates from today onward.

  "season": {
    "goal": "Train for long-distance cycling with the Atlas Mountain Race on February 28, 2027 as the first
major goal, followed by Paris-Brest-Paris in August 2027, and comfortably completing a randonneur brevet
series in between, starting with a 200 km in April 2027.",
    "rationale": "The season goal has been updated to reflect the athlete's full calendar of events: the
Atlas Mountain Race in February 2027 as the first peak, followed by Paris-Brest-Paris in August 2027, with
the 200 km brevet in April 2027 as an intermediate milestone. Given the athlete's history of maintaining
disciplined training for no more than 4 months at a time, the season is structured in focused, progressive
blocks with built-in fatigue management and deloads to sustain motivation and adaptation. The early blocks
prioritize aerobic durability, cadence efficiency, and low-load strength to build a resilient base without
burnout. Winter training preserves cycling specificity while incorporating skiing and running for cross-
training. The build phase progresses sustained power and long endurance, followed by brevet-specific pacing,
fueling, and equipment preparation. The plan respects the athlete's limited tolerance for prolonged training
stress by capping intensity early and introducing threshold work conservatively only after aerobic control
is demonstrated.",

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	D	A+	385.0 s	$0.0100	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00588	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.7/2 · Design 1.0/3 · Rationale 1.0/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The response is valid JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and FTP 220 W, matching the week plan for Friday. The session follows the plan well: knee-height rack pulls, two split squat sets, rest periods and the Pallof and bridge accessories, with sensible heart rate guidance. Weaknesses include the glute bridge and Pallof sets (2 each) and the rack pull set count that differ from the athlete's requested specificity, the 3 sets of rack pulls against the plan's note about holding the hinge conservatively, and an unexplained 'keep heart rate below 120' target that conflicts with the 110 bpm rest guidance used elsewhere. The rationale is specific and grounded in back pain and cycling posture, though it does not mention the fat-loss goal tied to this session. Season revision: The response names Atlas in the season goal and the block rationale, keeps block 1 starting on 2026-10-21, and keeps tomorrow, nextWeek and nextBlock null, so the three hard checks pass. The main weakness is that the season was not re-planned: the five blocks are the old ones, the season still ends on 2027-04-04, and Paris-Brest-Paris in August 2027 has no block at all, while no Atlas-specific build or taper block was added. Block 1 keeps its name, focus and every week unchanged apart from the rationale, and that rationale and the season rationale use meta phrasing such as remain unchanged and now includes. The current week and today's session are coherent and grounded in the supplied activities, forecast and constraints, with seven sessions and sensible indoor placement. Hard gates failed: block 1 is unchanged.

    "bikeWorkout": null,
    "description": "Gym Strength B — safe hip hinge and lower-body stability session. Warm up 5 minutes with light cardio and dynamic hip/spine mobility. Main set: (1) Elevated knee-height rack pulls or trap-bar pulls — 3 sets of 8–10 reps with a flat-back hip hinge, controlled tempo, 90–120 seconds rest between sets so your heart rate drops below 110 bpm before each set; (2) Bodyweight split squats — 2 controlled sets of 8–10 reps per leg, keeping your front knee tracking over your ankle and your torso upright, 90–120 seconds rest between sets. Accessory: (3) Glute bridges — 2 sets of 12 reps, squeezing at the top; (4) Pallof press — 2 sets of 10 reps per side, bracing your core against rotation. Cool down 5 minutes with hip and spine mobility stretches. Focus on a flat-back hip hinge during the elevated pulls to protect your lower back, and keep your quads fresh by not pushing past comfortable effort on the split squats. Heart rate should stay below 120 bpm throughout.",
    "optional": false,
    "optionalRationale": "This session builds the hip-hinge strength and posterior-chain resilience that directly protect your lower back during long rides and everyday movement, and it progresses the safe hinge mechanics started in Tuesday's Gym Strength A. The elevated rack/trap-bar pulls reinforce the upright cycling posture that reduces sit-bone pressure on very long rides, while controlled split squats build single-leg stability for both running and hiking. Skipping this session means your back and hip hinge miss a key adaptation week, slowing your path toward pain-free cycling posture and the core strength needed for the brevet series and your 5K goal."

  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, the 200 km brevet in April 2027, and build toward Paris-Brest-Paris in August 2027, working within sustainable four-month discipline windows",
    "rationale": "The season is structured around the athlete's updated multi-event long-distance cycling goal. Recent training supports a conservative aerobic-first progression: the athlete responded well to controlled indoor riding and sustained hiking, but the three-hour race at 187 bpm average HR and additional pole-vaulting load show a need to manage fatigue carefully. The first block emphasizes aerobic consistency, cadence, and low-load strength before introducing limited threshold work. The winter block preserves cycling while using skiing and easy running for cross-training durability. The build phase progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness. The athlete's self-acknowledged limit of about four months of disciplined training per block shapes the conservative progression across all phases.",

FAIL	$0.00627	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.9/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, has only the requested today object, and matches the planned 2026-10-30 gym session on date, duration, moderate intensity, 220 W FTP, TSS 30 and indoor flags. The exercise prescription is specific, with sets, reps, rest, a heart-rate gate below 110 bpm and cool-down, and it uses the athlete's coach feedback on rest and the back. Weaknesses: the description adds a third split-squat-free Pallach and plank block that is reasonable but does not give load guidance or a fallback for pain, and the split-squat volume of two sets is stated per leg in a way that is slightly ambiguous. Season revision: The response names Atlas in the season goal and in a new block, and keeps block 1 starting on 2026-10-21 with all eight keys present. However the season is chronologically broken: the Atlas block runs from 2027-04-05 to 2027-02-27 (end before start), and the post-Atlas PBP block starts 2027-02-28 and overlaps the Atlas date while the older April brevet and taper blocks remain ahead of Atlas. Block 1 is essentially unchanged apart from a copied rationale that contains meta-commentary about alignment with the new goal, so the current block is not genuinely re-planned for Atlas. The week and today are largely unchanged, the rest-day status is set to completed rather than rest, and the outline days show no Atlas-specific preparation. Hard gates failed: block 1 is unchanged.

Judgment: The JSON is clean, has only the requested today object, and matches the planned 2026-10-30 gym session on date, duration, moderate intensity, 220 W FTP, TSS 30 and indoor flags. The exercise prescription is specific, with sets, reps, rest, a heart-rate gate below 110 bpm and cool-down, and it uses the athlete's coach feedback on rest and the back. Weaknesses: the description adds a third split-squat-free Pallach and plank block that is reasonable but does not give load guidance or a fallback for pain, and the split-squat volume of two sets is stated per leg in a way that is slightly ambiguous.

```

```
    "bikeWorkout": null,
    "description": "Complete Gym Strength B in the full gym: warm up with 5 minutes of light cardio and
dynamic hip/spine mobility. Perform elevated knee-height rack or trap-bar pulls for 3 sets of 8–10 reps at a
controlled pace, taking 90–120 seconds of rest between sets so your heart rate drops below 110 bpm before
each set to protect your lower back. Follow with two bodyweight split-squat sets of 10–12 reps per leg,
focusing on depth control and keeping your torso upright. Finish with 3 rounds of Pallof presses (10 reps
per side) and 3x30-second planks, then cool down with your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session is essential for rebuilding your safe hip hinge pattern and
posterior-chain strength without overloading your quads or lower back. Skipping it would delay your ability
to progress into heavier loaded movements next week and leave you vulnerable to compensatory strain during
hikes and rides."
  }
}

SEASON REVISION

5.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
17.8 s	**$0.00782**	**no**	**yes**	**200**	**stop**

Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.9/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Judgment: The response names Atlas in the season goal and in a new block, and keeps block 1 starting on 2026-10-21 with all eight keys present. However the season is chronologically broken: the Atlas block runs from 2027-04-05 to 2027-02-27 (end before start), and the post-Atlas PBP block starts 2027-02-28 and overlaps the Atlas date while the older April brevet and taper blocks remain ahead of Atlas. Block 1 is essentially unchanged apart from a copied rationale that contains meta-commentary about alignment with the new goal, so the current block is not genuinely re-planned for Atlas. The week and today are largely unchanged, the rest-day status is set to completed rather than rest, and the outline days show no Atlas-specific preparation.

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

8.3/12.5

Qwen: Qwen3 VL 235B A22B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	185.0 s	$0.0134	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00599	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.7/2 · Design 0.7/3 · Rationale 1.0/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The session matches the plan for Friday 2026-10-30: a 45-minute moderate gym workout, indoor flag false, FTP 220 W and TSS 30, with the split squat volume capped at two sets as the coach asked. The exercise selection is sensible for the back-pain goal, with rack pulls, split squats, Pallof presses, and planks, and the 90 to 120 second rest matches the coach feedback. Weaknesses are that no loads or progression guidance are given for the rack pulls, there are no stop conditions or pain fallbacks, and the rationale is somewhat generic about injury risk rather than tied to the block's specific hinge progression. Season revision: The JSON has the eight required keys, seven week sessions, a matching today session, an empty bodyMetrics array, and block 1 starts on 2026-10-21. However, the season was not really re-planned: the five season blocks are copied from the old plan, the season still ends on 2027-04-04, Atlas on 28 February 2027 has no build or dedicated block, and Paris-Brest-Paris is absent from the season structure. Block 1 is effectively unchanged apart from a sentence in its rationale that names Atlas, so the required genuinely changed block is missing. The rationale fields also contain meta-commentary such as the goal now explicitly includes and remains unchanged, and the today session is essentially the supplied one. Hard gates failed: block 1 is unchanged.

TODAY PLAN

```
{
  "season": {
    "goal": "Train for long-distance cycling, including the Atlas Mountain Race on February 28, 2027, Paris-
Brest-Paris in August 2027, and a 200 km randonneur brevet in April 2027, while respecting the athlete’s
history of maintaining disciplined training for no more than 4 months at a time.",
    "rationale": "The season goal now explicitly includes the Atlas Mountain Race and Paris-Brest-Paris as
primary targets, with the 200 km brevet serving as a critical milestone. The athlete’s self-reported
limitation of sustaining disciplined training for only 4 months at most necessitates a conservative,
fatigue-managed progression with built-in deloads and cross-training to preserve motivation and avoid
burnout. The plan prioritizes aerobic durability, efficient cadence, and strength resilience across all
blocks, with threshold work introduced only after stable aerobic execution is demonstrated. Winter training
integrates skiing and easy running to maintain aerobic base without overloading the cycling-specific system.
The taper and race readiness phase ensures freshness for the 200 km brevet while preserving the ability to
peak again for the Atlas Mountain Race.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

Mistral Large 2407

8.3/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	37.3 s	$0.0579	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00621	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.3/2 · Grounding 0.7/2 · Detail 1.4/2

Combined judgment: Today plan: The response is valid JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes and indoor flag, and it keeps the planned Gym session and uses the 220 W FTP. The exercise prescriptions are specific with sets, reps, rest and cues, and they follow the block's hinge progression, though the 3 sets of 8 pulls and 3 sets of plank go beyond the planned 3 goblet-squat and 2 split-squat limits and the lat pulldown load of 50-55 kg is not clearly tied to the athlete's last 50 kg set. The optionalRationale is grounded in the back-pain goal and the block's loading rhythm, but the Week 3 reference is slightly speculative, and the athlete's own gym comment about the quads is not addressed. Season revision: The JSON shape is valid, block 1 starts on 2026-10-21, the later blocks tile the season, tomorrow, nextWeek and nextBlock stay null, and Atlas is named in the season goal and blocks. The main design failure is chronological: the Atlas taper and race-readiness block is dated 2027-03-22 to 2027-04-04, after the 28 February race, so no Atlas taper precedes the event and the April 200 km brevet is not shown as a preparation target. The grounding is also weak, since today's run is marked completed with invented heart-rate figures (118-132 bpm, felt controlled) although the input records no activity for 1 November. Past sessions were also rewritten, merging the 28 October rowing and run into one session.

TODAY PLAN

```

```
    "bikeWorkout": null,
    "description": "This session builds safe hip-hinge mechanics and posterior-chain resilience to eliminate your lower-back pain on long climbs and carpentry work. After a 5-minute general warm-up (treadmill walk or rowing machine at 100–110 bpm), perform:\n\n1. Elevated Knee-Height Rack or Trap-Bar Pulls – 3 sets × 8 reps at a controlled tempo (2 sec up, 1 sec pause, 3 sec down), starting with an empty bar or 10–15 kg. Rest 90–120 sec between sets, letting your heart rate drop below 110 bpm before each set. Focus on a flat back and neutral spine; if your lower back rounds, reduce the pull height or weight.\n\n2. Bodyweight Split Squats – 2 sets × 8 reps per leg, using a bench or box for support if needed. Keep your torso upright and front knee tracking over your toes. Rest 60 sec between sets.\n\n3. Lat Pulldown – 3 sets × 10 reps at 50–55 kg, using a slow eccentric (3 sec down) to protect your shoulders. Rest 60 sec between sets.\n\n4. Pallof Press – 3 sets × 10 reps per side with a cable or band at chest height, holding each press for 2 sec. Rest 45 sec between sets.\n\n5. Plank – 3 sets × 30 sec, focusing on deep core engagement and steady breathing. Rest 30 sec between sets.\n\nFinish with your 8-minute daily hip and spine mobility circuit: couch stretch, standing forward fold, 90/90 hip rotations, deep squat hold, supine figure-4 glute stretch, and cat-cow.",
    "optional": false,
    "optionalRationale": "Skipping this session would delay the safe rebuilding of your hip-hinge strength and core stability, directly undermining your goal of eliminating lower-back pain on long climbs and carpentry work. The elevated pulls and split squats are the foundation for a pain-free posterior chain, and the controlled tempo and rest intervals ensure your back adapts without injury. Missing this session would also disrupt the 4:1 loading rhythm of the block, increasing the risk of connective-tissue overload in Week 3 when we expand volume."
  }

  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, then Paris-Brest-Paris in August 2027, with intermediate randonneur brevets including a 200 km in April 2027. Build durable aerobic endurance, efficient cadence, and strength to handle long-distance cycling with limited sustained training blocks.",
    "rationale": "The season now targets the Atlas Mountain Race (February 28, 2027) as the primary early-season objective, followed by Paris-Brest-Paris (August 2027) and intermediate randonneur brevets. The athlete's history of maintaining disciplined training for only 4 months at a time requires a conservative, block-based progression that prioritizes aerobic durability and efficiency over high-intensity volume. The plan balances cycling specificity with cross-training (skiing, running) to sustain fitness through winter while avoiding burnout. The first block (Aerobic Base and Strength Foundation) establishes low-fatigue endurance and cadence control, the winter block maintains cycling through controlled threshold work and cross-training, and the build phase progresses sustained power and long endurance. The brevet-specific block focuses on pacing, fueling, and back-to-back riding, while the taper ensures race readiness without excessive fatigue.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue,
while respecting the athlete's limited sustained training capacity.",
    "rationale": "The block remains focused on aerobic durability and cadence efficiency, but now explicitly
accounts for the athlete's history of maintaining disciplined training for only 4 months. The progression is
conservative, with strict heart-rate and cadence control to avoid early burnout. Week 1's higher-than-
planned load (587 TSS) due to unplanned race and strength activity supports a cautious approach to Week 2,
with no threshold work until Week 3. Strength sessions are kept light and logged separately to manage leg
load. The block's 7-week structure ensures a gradual rebuild of endurance volume, with a deload in Week 4 to
absorb fatigue before the winter block. The 225 W FTP baseline is retained, as no fresh threshold test or
sustained power evidence justifies a change.",

perplexity/sonar-pro-search

Perplexity: Sonar Pro Search

8.3/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	D	37.4 s	$0.1596	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00595	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.8/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate correctly keeps today's planned gym session with date, status planned, moderate intensity, 45 minutes, indoor flag and FTP of 220 W, and gives concrete sets and reps for the hinge, squat, pulls and core work consistent with the coach replies. Weaknesses: the session drops the 3-set goblet squat and the plan's specified split-squat load handling is loosely described, the description does not mention heart-rate targets the athlete asked for in strength work, and the rationale is generic about the cycling posture rather than tied to the week's target load. The 5 minutes of easy treadmill or cycling warm-up is a reasonable addition, and the stop conditions for back pain add useful safety detail. Season revision: The response is valid JSON, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and names the Atlas Mountain Race in the season goal and block rationale. The season is largely the old one with renamed blocks: it still ends on 2027-04-04, never reaches Paris-Brest-Paris in August 2027, and places no Atlas-specific build or taper around 28 February 2027, with a taper placed before the April brevet instead. Block 1 is essentially unchanged apart from a rationale edit and small load wording, and the current week and today's session are coherent but generic about the Atlas goal.

qwen/qwen3.6-35b-a3b

8.2/12.5

Qwen: Qwen3.6 35B A3B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	45.1 s	$0.0159	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00631	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 1.2/2 · Detail 1.2/2

Combined judgment: Today plan: The session is correctly marked planned, dated 2026-10-30, indoor and non-outdoor, moderate 45-minute gym work with the planned 30 TSS and 220 W FTP, and it follows the coach's stated Week 1 changes such as rack pulls in place of floor deadlifts and two split-squat sets. The description gives concrete sets, reps, rest and a heart-rate recovery gate, with a sensible warm-up and cool-down. Weaknesses: no working loads are given for the rack pulls or split squats, the Pallof-or-plank finisher is ambiguous, the rationale is decent but generic about back protection, and the today object carries an extra rationale field beyond the requested shape. Season revision: The response keeps block 1 starting on 2026-10-21, returns seven week sessions with a matching today session, leaves tomorrow, nextWeek and nextBlock null, and correctly returns an empty bodyMetrics array. Atlas appears in the season goal, season rationale and block rationale, but the season was not genuinely re-planned: blocks 2 to 5 are copied from the old 200 km April plan, so the brevet-specific and taper blocks still end on 2027-04-04 while the season endDate was moved to 2027-08-31, leaving April to August uncovered with no Atlas taper, no brevet series and no Paris-Brest-Paris block. The current block's weeks are nearly identical to the supplied ones, so block 1 is barely changed, and the top-level output adds coachQuestion and modelsRemarks beyond the eight keys the revision request named. Hard gates failed: block 1 is unchanged.

TODAY PLAN

10.3/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

    "title": "Gym Strength B: Elevated Hinge & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "5-minute light cardio warm-up (treadmill walk or stationary bike) followed by dynamic
hip and spine mobility (cat-cow, leg swings, hip circles). Main block: 3 sets of 8–10 reps of elevated knee-
height rack pulls or trap-bar pulls, focusing on a flat-back hip hinge and controlled eccentric lowering;
take 90–120 seconds of rest between sets until your heart rate drops below 110 bpm. 2 sets of 8–10 reps per
leg of bodyweight split squats, keeping your torso upright and descent controlled to protect your recovering
quads; rest 90 seconds. 3 sets of 10 reps of 12 kg goblet squats, maintaining steady form without pushing
into late-set quad burn; rest 90 seconds. Finish with 3 sets of 30-second Pallof presses or planks for core
anti-rotation stability. Cool down with 5 minutes of light stretching targeting hip flexors and hamstrings,
followed by your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and hip-hinge control necessary
for your fat-loss and back-pain goals during this Autumn Re-Entry block. Skipping it means losing a critical
week of safe strength adaptation, which delays your ability to maintain a comfortable cycling posture and
increases the risk of lower-back irritation during next week's extended endurance sessions.",
    "rationale": "This Gym Strength B session safely progresses your posterior chain and lower-body
stability by introducing elevated rack pulls and controlled split squats, directly addressing your lower-
back vulnerability and sit-bone discomfort while supporting the block's focus on conservative strength and
core flexibility. It builds the foundational hip mobility and muscular endurance you need to transition
smoothly into longer winter endurance sessions without triggering back irritation or excessive evening
hunger."

google/gemini-3.5-flash-lite

8.2/12.5

Google: Gemini 3.5 Flash Lite

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	9.7 s	$0.0180	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00550	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.8/2 · Design 1.6/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 0.6/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate enum values, and a 45-minute gym session that matches the Friday gym slot and the estimated TSS of 30. The session is specific, with rep ranges, rest periods, a heart-rate recovery cue and a mobility finish, though it adds seated cable rows and a Pallof press that go beyond the plan's listed hinge and split-squat substitutions. The rationale ties the work to back resilience and sit-bone comfort but says little about the fat-loss goal or the week's load target. Detail is limited: the pulls have no load guidance or RPE, and there is no stop condition or fallback if the lower back flares. Season revision: The candidate names Atlas throughout the season and block 2 and 3 names, and keeps block 1 starting on 2026-10-21, so the hard requirements are met. However the season end date of 2027-08-31 is kept as a PBP taper and the block list tiles without gaps, but the season block 1 summary and current block are unchanged apart from the start date and the block rationale still reads as if the earlier plan is being revised. Block 1 itself is largely unchanged from the supplied plan rather than genuinely re-planned for Atlas, and the week and today sessions show no Atlas-specific preparation beyond a label in the rationale. The outline days lack per-day TSS and power guidance is absent for the week, and the bodyMetrics entry with nulls is acceptable but adds nothing.

TODAY PLAN

10.1/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
1.8 s	$0.00562	no	yes	200	stop

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 1.2/3 · Rationale 1.1/2 · Grounding 0.6/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym workout with the right date, enum values and no bikeWorkout, and it stays within the Week 1 spec of elevated pulls and two split-squat sets with the 90 to 120 second rest and HR below 110 cue. However, it omits the goblet squat work that the week plan and athlete feedback name as a core lift and does not give explicit loads, so the strength prescription is less specific than the athlete asked for. The description adds useful rest and HR execution cues and a stop-or-regress note is missing, while the rationale is grounded in the back and sit-bone history but does not state the calorie or fat-loss contribution of this session. Season revision: The candidate names Atlas throughout, keeps block 1 starting on 2026-10-21, and tiles the three new blocks cleanly to 2027-02-28, so the mechanical checks pass. However, the season is truncated at the Atlas date and drops Paris-Brest-Paris in August 2027, the April 200 km brevet and the brevet series, which the survey explicitly preserves. Today's session is marked completed and described as a finished treadmill run with legs feeling fresh, but no such activity exists in the input, so this is fabricated grounding. The season and block rationales also use revision-style wording about the goal changing, and the Atlas race is described with invented specifics such as distance and unsupported logistics.

{
  "season": {
    "goal": "Successfully complete the Atlas Mountain Race on February 28, 2027, with durable aerobic
endurance, efficient climbing cadence, robust fatigue resistance, and sufficient strength to handle
sustained off-pavement terrain — then maintain fitness through Paris-Brest-Paris in August 2027, supported
by consistent randonneur brevet performance starting with the 200 km in April 2027.",
    "rationale": "The season goal now reflects the athlete’s primary objective: the Atlas Mountain Race
(AMR), a ~1,200 km unsupported ultra-endurance gravel/mountain bike race with extreme elevation, variable
surfaces, and self-supported logistics. This demands exceptional aerobic durability, metabolic efficiency at
low intensities, muscular resilience for long hours in the saddle, and robust recovery capacity — all of
which must be built progressively without exceeding the athlete’s documented 4-month sustainable training
window. The plan therefore prioritizes consistency over peak intensity early on, embeds frequent recovery
checks, avoids stacking fatigue (e.g., no concurrent high-load strength + hard cycling), and uses skiing and
easy running as low-impact cross-training to preserve aerobic base while reducing repetitive strain. The 200
km brevet in April serves as the first key benchmark of pacing, fueling, and equipment readiness; PBP in
August is the longer-term durability test. All blocks are calibrated to avoid burnout: AMR-specific
adaptations (e.g., multi-hour gravel endurance, sleep-deprived pacing, gear load management) begin only
after solid aerobic and strength foundations are confirmed in late December/early January.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build durable low-intensity aerobic capacity, neuromuscular efficiency at cadence ≥85 rpm, and
full-body strength resilience — all without accumulating residual fatigue.",
    "rationale": "This block remains the critical foundation for AMR: success hinges not on peak power but
on sustaining 60–75% FTP for 12+ hours per day across 5–7 days, with minimal recovery between efforts. The
athlete’s recent week (19–25 Oct) delivered ~587 TSS — far higher than intended due to the 3-hour Zwift race
and pole vaulting — confirming their vulnerability to fatigue stacking. Therefore, Weeks 2–7 prioritize
*consistency over volume*: every aerobic session is capped at HR ≤140 bpm (Z2), cadence ≥85 rpm from minute
one, and no tempo or threshold work until Week 3 — and only if Week 2 shows clean execution (no HR drift,
stable cadence, no leg heaviness). Strength is kept light, bilateral, and logged separately to prevent
interference. FTP remains fixed at 225 W through this block because no threshold stimulus has been completed
under controlled conditions; gains will emerge gradually only when fatigue is fully managed. The 7-week
duration respects the athlete’s 4-month ceiling by front-loading adaptation and building in a planned deload
(Week 4) before volume peaks in Weeks 5–6.",

Tencent: Hy3

8.1/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	122.1 s	$0.0145	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00580	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.9/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.4/2 · Detail 0.9/2

Combined judgment: Today plan: The candidate returns the exact today object for 2026-10-30 with planned status, workout type, moderate intensity, 45 minutes, indoor flag and a 220 W FTP that match the plan, and it correctly keeps the session off the bike. The session matches the plan's Gym Strength B content (elevated pulls and two split-squat sets), but it omits the 3 squat-related details the athlete wanted (the plan calls for specific exercises, sets and reps) and drops the goblet squat and glute work, so the prescription is thinner than the athlete's requested detail. Rationale is specific to the hinge and back goals, though it does not mention the heart-rate-below-110 bpm rest cue in the rationale, and the split squat load and pull load are left vague without a concrete starting load or RPE guidance. Season revision: The response names Atlas in the season goal, block 3 focus and several rationales, and it keeps block 1 starting on 2026-10-21 with the tiling intact. However, block 1 is barely changed: its name, focus and all seven weeks are the same as before, and only one sentence about the new goal was appended to its rationale, which also contains meta wording such as remain unchanged. The season is not truly re-planned around Atlas: block 3 simply ends on the Atlas date with no taper before it, the brevet blocks still follow it, the season end stays at 2027-04-04, and Paris-Brest-Paris in August is explicitly placed outside scope despite being a stated goal. The current week and today's session are coherent and grounded in the supplied activities, forecast and athlete constraints, but they are carried over largely unchanged. Hard gates failed: block 1 is unchanged.

Judgment: The response names Atlas in the season goal, block 3 focus and several rationales, and it keeps block 1 starting on 2026-10-21 with the tiling intact. However, block 1 is barely changed: its name, focus and all seven weeks are the same as before, and only one sentence about the new goal was appended to its rationale, which also contains meta wording such as remain unchanged. The season is not truly re-planned around Atlas: block 3 simply ends on the Atlas date with no taper before it, the brevet blocks still follow it, the season end stays at 2027-04-04, and Paris-Brest-Paris in August is explicitly placed outside scope despite being a stated goal. The current week and today's session are coherent and grounded in the supplied activities, forecast and athlete constraints, but they are carried over largely unchanged.

  "season": {
    "goal": "Build long-distance cycling fitness for Atlas Mountain Race (2027-02-28), brevet series starting with 200 km in April 2027, and ultimately Paris-Brest-Paris (Aug 2027); given max ~4 months disciplined training, focus structured base and build through winter ending at Atlas, then conservative brevet prep.",
    "rationale": "The athlete's goal expanded to include Atlas Mountain Race and Paris-Brest-Paris, with a 200 km brevet in April as intermediate. Ability to maintain disciplined training only up to 4 months means the primary focused window is late October to late February. Recent training shows good aerobic response but warns of fatigue from unplanned race and pole vaulting; thus base block stays aerobic-first, cadence focus, low-load strength before limited threshold work. The winter block preserves cycling while using skiing and easy running for cross-training durability. The build phase progresses sustained power and long endurance riding, capped at Atlas, followed by brevet-specific pacing, fueling, and taper. PB in August is beyond this season's scope.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change. With the athlete's expanded goal (Atlas Mountain Race Feb 28,
brevet April) and max 4-month disciplined training window, this base phase is the critical foundation before
the build blocks.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race.",

Qwen: Qwen3.6 Flash

8.1/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	88.8 s	$0.0188	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00607	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate returns clean JSON with the correct date, planned status (nothing recorded today), 45-minute moderate workout, indoor flag, null bikeWorkout and the 220 W FTP and 30 TSS from the plan, so fidelity is strong. The session follows the plan's Gym Strength B content (elevated pulls, two split-squat sets, core work) and uses the coach's 90–120 second rest and under-110 bpm cues. The main weakness is that the elevated pulls and split squats have no rep counts or loads, even though the athlete explicitly asked for exact exercises, sets and reps for strength work. The rationale is specific to the back, hip hinge and sit-bone goals, though its appetite-related claims are somewhat speculative. Season revision: The response keeps the required shape, block 1 starts on 2026-10-21, today matches the seven-session week, and the block rationale and season goal name Atlas. However the season is not properly re-planned: the season endDate is moved to 2027-08-31 but the supplied blocks still end on 2027-04-04, so the blocks do not tile to the season end, and no Paris-Brest-Paris or post-April brevet block is added. The block name, focus and weeks are unchanged apart from rationale, so the Atlas taper and build toward 28 February 2027 is not actually designed into the blocks. The current week and today's session are coherent and grounded in the supplied activities, with bodyMetrics correctly empty, but today's session is essentially the supplied one with little new detail. Hard gates failed: block 1 is unchanged.

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Complete a 45-minute moderate gym strength session focused on rebuilding your posterior
chain safely. Begin with a 5-minute dynamic warm-up, then perform three sets of elevated knee-height rack or
trap-bar pulls, taking full 90–120 seconds of rest between sets so your heart rate drops below 110 bpm
before each lift. Follow with two controlled bodyweight split-squat sets, prioritizing strict form over
volume to protect your recovering quads. Conclude with three sets of Pallof presses (3x10 per side) and a
30-second plank, finishing immediately with your unrecorded 8-minute hip and spine mobility circuit. This
structured loading reinforces the flat-back hip hinge mechanics essential for pain-free climbing and long-
distance saddle comfort, while the controlled rest intervals keep your cardiovascular stress in check to
prevent post-session hunger spikes.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and safe hip-hinge mechanics
required to maintain a stable, aerodynamic cycling posture without lower-back strain or sit-bone discomfort.
It also preserves lean muscle mass to sustain your resting metabolic rate for steady fat loss. If you skip
it, you lose critical structural conditioning for your autumn base, delay recovery of your lumbar stability,
and reduce the muscular leverage that keeps your evening hunger manageable through efficient energy
partitioning."
  }

  "season": {
    "goal": "Complete the Atlas Mountain Race (February 28, 2027), followed by Paris-Brest-Paris (August
2027), with comfortable completion of a randonneur brevet series including a 200 km event in April 2027.
Maintain disciplined training within 4-month cycles to prevent burnout and sustain long-term progress.",
    "rationale": "The season extends through August 2027 to accommodate the Atlas Mountain Race, Paris-
Brest-Paris, and the intervening brevet series. Because you historically maintain disciplined training for a
maximum of four months, the long-term structure intentionally builds in conservative progression, strict
fatigue management, and scheduled deload phases to preserve freshness across the entire campaign. The
initial block prioritizes aerobic durability, efficient cadence above 85 rpm, and low-load strength while
avoiding unnecessary strain. Recent training shows strong responses to controlled indoor riding and steady
hiking, but also highlights the need to manage sudden fatigue spikes from unplanned high-intensity efforts.
By anchoring the early phase in repeatable, sub-threshold volume and careful recovery, you build the
physiological resilience required for multi-day mountain racing and ultra-endurance brevets without hitting
the four-month wall prematurely.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block establishes the aerobic engine and pedaling efficiency required for the Atlas
Mountain Race and subsequent ultra-endurance events. Given your four-month training limit, the block
deliberately avoids aggressive volume jumps or early threshold work, instead focusing on consistent, well-
controlled aerobic sessions and light strength to build tissue tolerance without systemic fatigue. Week 1's
actual load (~587 TSS) exceeded the intended recovery target due to an unplanned three-hour race and
additional strength/pole-vaulting work, which reinforces keeping Week 2 conservative. Strict heart-rate
ceilings and cadence targets from the first minute of every ride ensure you develop sustainable pacing
habits. The 225 W FTP baseline is retained because no fresh threshold test or sustained power evidence
justifies a change, and maintaining this baseline while managing fatigue sets you up for gradual gains in
Weeks 3–7.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and sustains multi-day mountain
racing.",

8.1/12.5

Thinking Machines: Inkling Small

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	40.0 s	$0.0286	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00563	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate matches the required JSON shape, the 2026-10-30 date, the planned moderate 45-minute gym workout, the indoor flags and the 220 W FTP. The exercise selection is sensible and grounded in the athlete's history, including the two-set split squat cap, the lat pulldown progression from 30 to 50 kg, the elevated pulls replacing floor deadlifts and the heart-rate cap. Weaknesses: the elevated pull load is not given as a working weight or a starting-load assumption, there are no explicit stop conditions for back pain, and the rationale stays fairly generic on fat loss and the week's target load. Season revision: The response returns the eight required keys and seven sessions, and block 1 starts on 2026-10-21 as required. However, the season and block plans barely change: the season blocks are essentially the old ones with Atlas only mentioned in the goal and a vague taper note, and the Atlas race itself is not placed in the calendar (the taper block still runs to 2027-04-04, and the 200 km brevet is still the only named target). The block rationale and week focus never name Atlas, which is a weak sign of Atlas preparation, and the candidate asks a coachQuestion about a post-Atlas break instead of building the design in. Week 2 also reports 230 TSS actual where the input gives no such figure, and the week text keeps some meta-commentary about what changed, though the day-level detail and grounding in the activities are solid.

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Gym Strength B protects your lower back and builds single-leg stability ahead of spring tarmac riding and long rides. Warm up 8 minutes with hip/spine mobility, then complete: (1) Elevated knee-height rack or trap-bar pulls — 3 sets of 6–8 reps with a flat-back hip hinge, resting 90–120 s between sets until heart rate drops below 110 bpm; (2) Bodyweight split squats — 2 controlled sets of 10 reps per leg (capped at two sets to protect your quads); (3) Glute bridges — 3×12; (4) Lat pulldowns — 3 sets (12 reps at 30 kg, 10 at 40 kg, 10 at 50 kg); (5) Pallof press — 3×10 per side; (6) Plank — 3×30–45 s. Finish with your unrecorded 8-minute mobility circuit. Keep effort moderate (HR ~102–142 bpm) so you stay in the fat-oxidation zone without triggering evening hunger, and never load floor deadlifts—elevated pulls replace them to keep your back safe.",
    "optional": false,
    "optionalRationale": "This session is not optional: it delivers the second weekly gym stimulus for safe posterior-chain hinge mechanics and split-squat balance. If you skip it, you delay the back-protection and leg-stability adaptations you need before weekend hikes and spring road riding, increasing risk of quad burn and back strain when volume rises."

qwen/qwen3.5-plus-20260420

8.0/12.5

Qwen: Qwen3.5 Plus 2026-04-20

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	133.7 s	$0.0376	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00607	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.1/2 · Grounding 1.4/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP and TSS 30, and matches the Gym Strength B session in the current plan. The exercise list is sensible and specific, with sets, reps, rest and a heart-rate cue, but it drops the goblet squat sets that the week plan explicitly keeps at three steady sets, and the knee-height pull load of 30-40 kg is an unstated assumption. The rationale is grounded in the back and saddle goals, though it lacks any stop condition, pain fallback or progression guidance for the lifts. Season revision: The season goal and season rationale name the Atlas Mountain Race, but the season blocks are essentially the old 200 km brevet shape: the final spring blocks still taper toward a 4 April brevet, Atlas on 28 February falls at the end of a build block with no race taper, and Paris-Brest-Paris in August 2027 is absent from the season entirely. The current block keeps the same name, focus, dates and all seven week targets, and its rationale never mentions Atlas, so block 1 is not meaningfully changed for the new goal. The current week and today's run are coherent, grounded in the logged sessions, correctly indoors given the forecast, and respect the heart-rate ceiling, but they are carried over almost verbatim rather than redesigned around the new goal. Hard gates failed: block 1 is unchanged.

TODAY PLAN

```

```
    "bikeWorkout": null,
    "description": "Today's Gym Strength B focuses on safely rebuilding your hip hinge and core stability while protecting your lower back. Perform 3 sets of 10 reps of light elevated rack or trap-bar pulls (knee height, ~30-40 kg), focusing on a flat back and controlled tempo. Follow with 2 sets of 10 reps per leg of bodyweight split squats, keeping the torso upright to minimize quad burn. Complete 3 sets of 12 reps of glute bridges, 3 sets of 10 reps per side of Pallof presses, and 3 x 30-second planks. Rest 90-120 seconds between sets to let your heart rate drop below 110 bpm. Finish with your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "Skipping this session would delay the neuromuscular adaptation of your hip hinge and core anti-rotation, which are critical for maintaining a pain-free, aerodynamic cycling posture during your upcoming brevet series. Completing it now locks in the structural resilience you need to handle higher training loads in the Early Winter block.",
    "rationale": "This session anchors your Week 1 multimodal foundation by introducing the second gym day, specifically targeting the posterior chain and core stability needed to eliminate saddle discomfort and prevent back pain on long rides. The elevated hinge progression and controlled split squats safely rebuild your hip mechanics without overloading your recovering quads or lower back, keeping the stimulus strictly in the moderate zone to support steady fat loss without triggering evening hunger spikes."

upstage/solar-pro4

7.9/12.5

Upstage: Solar Pro 4

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	46.5 s	$0.00672	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00617	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 0.8/2 · Grounding 0.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, contains only the requested today object, and matches the planned Friday gym session on 2026-10-30 in date, type, intensity, 45-minute duration, indoor flag, 30 TSS and 220 W FTP. The exercise selection respects the back constraints from the block plan (elevated pulls, capped split squats, glute bridges, Pallof work) and gives concrete sets, reps and rest, with a sensible stop condition for the lower back. Weaknesses are that loads and RPE are not specified for the pulls and Pallof press, the sub-110 bpm pre-set heart-rate instruction is loosely tied to rest timing, and the plank progression is not clearly anchored to prior feedback, although the rationale is specific to the athlete's back and fat-loss goals. Season revision: The response mentions Atlas in the season goal and rationale, keeps block 1 starting on 2026-10-21, and keeps the seven-session week and the null tomorrow, nextWeek and nextBlock fields. However, the block 1 changes are essentially cosmetic: the name, focus, weeks and load targets are unchanged, and the block rationale is meta-commentary about a survey update. The season is not really re-planned for the new goal: the season still ends on 2027-04-04, so Paris-Brest-Paris in August 2027 is absent, and no block names or focuses on Atlas preparation. Today's session is also wrongly marked completed with an invented description of the run's heart rate and cadence, which the input does not support. Hard gates failed: block 1 is unchanged.

{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Elevated Hinge & Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session focused on safe posterior-chain and core work to support your fat-loss and
back-health goals. Warm up with 5 minutes of easy cycling or brisk walking, then perform: elevated knee-
height rack or trap-bar pulls (3 sets of 8 reps, using a load that lets you keep a flat back and stop before
your lower back rounds), bodyweight split squats (2 sets of 10 reps per leg, controlled and pain-free),
glute bridges (3 sets of 12 reps, steady and moderate), Pallof press (3 sets of 10 reps per side, anti-
rotation focus), and a 30-second plank (2 sets, only if your back feels stable). Take 90–120 seconds of rest
between sets so your heart rate drops below 110 bpm before each set. Finish with your daily 8-minute hip and
spine mobility circuit. Because today is rainy and cool, this indoor gym session keeps your effort in a
controlled moderate zone without adding outdoor exposure.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge mechanics and core anti-rotation strength
that directly reduce the back ache you feel on long climbs and during crouching work, while the controlled
moderate effort supports steady fat loss without spiking evening hunger. Skipping it today would leave your
posterior chain and core under-loaded for the week, slowing the posture and back-durability gains that let
you sit more comfortably on very long rides and eventually hold a more aerodynamic position."

    "rationale": "This week closes the conservative rebuild before Week 3's first controlled threshold
stimulus. Tuesday and Friday strength sessions, Wednesday's short rowing and easy run, a missed Thursday
trainer ride, and Saturday's 2 h 05 min hike at 114 bpm average delivered the aerobic purpose without the
cadence-specific cycling. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week ends with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3 fresh. The 30-minute run keeps running-specific
durability alive at minimal cost, and the week's remaining priority — cadence above 85 rpm from the first
minute of every ride — carries into next week, because repeatable efficiency at low intensity is what
carries you through 200 km in April.",

    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 steps per minute. Keep the effort conversational from the
first minute and let pace fall away rather than pushing heart rate up on any incline. Indoors because rain
and 7 m/s gusts are forecast through the day. Completed the planned 30-minute treadmill run at an easy
effort; heart rate stayed in the 115-135 bpm band and cadence held around 165-170 spm, so the session
matched its aerobic intent without adding fatigue.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "completed",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this short run would not meaningfully reduce your aerobic durability, but
it would lose the running-specific maintenance that keeps your overall endurance base more resilient through
the winter; the cost is small, so the session is kept as a low-fatigue habit rather than treated as
optional.",

7.9/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	9.6 s	$0.0119	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00584	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.0/2 · Design 0.9/3 · Rationale 1.0/2 · Grounding 1.2/2 · Detail 0.9/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned gym session dated 2026-10-30 with the right duration, moderate intensity, indoor flag and null bikeWorkout, and it follows the athlete's preference for specific sets and reps. The exercise list is grounded in the plan and recent feedback, with rest guidance to keep heart rate under 110 bpm and the elevated hinge in place of floor deadlifts. However, the description lists more items than the 45-minute plan names, omits any load guidance or stop conditions for the back, and the rationale is somewhat generic about the loss from skipping rather than tied to the Week 1 targets. Season revision: The response names Atlas in the season goal and block rationale, keeps block 1 starting on 2026-10-21, leaves earlier blocks alone, and keeps tomorrow, nextWeek and nextBlock null. The season redesign is weak, though: blocks 2 to 4 are essentially unchanged, there is no Atlas-specific taper or recovery after 28 February, the 4-month training ceiling is ignored by a plan running to August, and the final block is relabelled as a 23-week taper that covers the summer PBP build. Block 1 week targetLoad fields were reduced to generic words, and the season and block rationales read as meta-commentary about the update. Completed-day session descriptions were rewritten rather than kept as supplied, and the Thursday session is typed as a workout while titled Rest.

nousresearch/hermes-3-llama-3.1-405b

7.9/12.5

Nous: Hermes 3 405B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	159.8 s	$0.0302	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00621	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.0/2 · Design 1.4/3 · Rationale 0.8/2 · Grounding 1.5/2 · Detail 0.8/2

Combined judgment: Today plan: The JSON contract and fidelity are sound: the date, planned status, 45-minute moderate gym session, outdoor false, FTP 220 W and TSS 30 all match the week plan. The main weakness is design and detail: the description names elevated pulls and two split-squat sets but gives no exercise list, sets, reps, load guidance or RPE, even though the athlete explicitly asked for very specific strength workouts. The rationale is reasonably tied to the back and posture goals, but the claim about priming fat-oxidizing enzymes is an overreach, and the mobility circuit and heart-rate rest cue are the most useful grounded details. Season revision: The season is refreshed with Atlas Mountain Race in the build, the 200 km brevet and Paris-Brest-Paris retained, block 1 starts on 2026-10-21, and tomorrow, nextWeek and nextBlock stay null. However, block 1 is barely changed: only its rationale was edited, while its name, focus, weeks and the current week and today session still never mention Atlas, which is the weak point. The season has no Atlas-specific taper before 28 February, and the block rationale contains meta wording such as remain unchanged and now aligned. The bodyMetrics array includes a null-valued entry where an empty array was the correct output. Hard gates failed: block 1 is unchanged.

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, and dates remain unchanged, but the goal is now the Atlas Mountain
Race in February 2027, with a 200 km brevet in April and Paris-Brest-Paris in August as stepping stones. The
4-month training progression aligns with the athlete's historical ability to maintain disciplined training.
Week 1 is now aligned with the actual 19-25 October week and its much higher realized load. The three-hour
race, additional activity, strength and pole-vaulting session, controlled ride, and long hike produced
roughly 587 TSS, so this was not the low-stress recovery week originally targeted. The higher load supports
a conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 0.8/2 · Detail 1.0/2

Combined judgment: Today plan: The session matches today's planned moderate 45-minute indoor gym workout, correctly marked planned and non-outdoor, and the exercise list (knee-height pulls, two bodyweight split squat sets, rows, Pallof, planks) follows the block's hinge-progression and back-safety intent with explicit sets, reps, and a rest cue. The main weaknesses are the contract: the response adds a nested week object with seven sessions inside today rather than returning only the requested today object, and the prescription gives no load guidance for the pulls or rows, no RPE target, and no fallback if the back irritates. The rationale is specific to posterior-chain durability and the cycling posture goal, though the grounding does not reference the athlete's recorded quad-burn and goblet-squat feedback that shapes this week. Season revision: The JSON is valid and keeps the required top-level structure, seven week sessions and a matching today session, and block 1 still starts on 2026-10-21. However, the season was not re-planned for the Atlas Mountain Race on 28 February 2027 or for Paris-Brest-Paris in August 2027: the season still ends on 2027-04-04 with April brevet taper blocks, and no block name, focus or week names Atlas. The current block weeks are unchanged from the supplied plan, so the block is barely revised. Today's session was marked completed with an invented note about a treadmill run the input never recorded, and some session TSS values were changed without basis.

          "description": "Steady 2-hour outdoor mountain hike in the calmer Saturday weather window with a
strict duration cap and controlled effort to build fat-oxidizing aerobic endurance while protecting your
recovering ankles. Keep the climbs well below 140 bpm by taking shorter steps and brief pauses on steep
grades, then do your 8-minute mobility routine after.",
          "optional": false,
          "optionalRationale": "This is your main weekend aerobic stimulus for the week, and it develops the
aerobic durability, hiking-specific leg strength, and contact-point tolerance that support both fat loss and
future long randonneur events. If you skip it, you lose the longest low-intensity session of the week, which
is the most specific work for building a larger endurance base without the hunger spike risk of harder
training."

SEASON REVISION

5.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
11.5 s	**$0.0204**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 0.8/2 · Detail 1.0/2

Judgment: The JSON is valid and keeps the required top-level structure, seven week sessions and a matching today session, and block 1 still starts on 2026-10-21. However, the season was not re-planned for the Atlas Mountain Race on 28 February 2027 or for Paris-Brest-Paris in August 2027: the season still ends on 2027-04-04 with April brevet taper blocks, and no block name, focus or week names Atlas. The current block weeks are unchanged from the supplied plan, so the block is barely revised. Today's session was marked completed with an invented note about a treadmill run the input never recorded, and some session TSS values were changed without basis.

nousresearch/hermes-4-405b

7.8/12.5

Nous: Hermes 4 405B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	173.7 s	$0.0498	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00617	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.5/2 · Design 0.8/3 · Rationale 0.8/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, the date, status, workout type, moderate intensity, 45 minutes, indoor flag, FTP and TSS all match the plan's Friday gym session, and bikeWorkout is correctly null. The exercise list (elevated pulls, two split-squat sets, planks, stretching) follows the block's hinge and split-squat progression with sensible rep ranges and rest, though it drops the goblet squats the week plan calls for and gives no load progression or stop condition. The rationale ties the session to back protection and cycling posture, but it does not state what fat-loss or hinge progress is lost by skipping, and the detail is thinner than it could be. Season revision: The response mentions Atlas in the season goal and in later block names, and it keeps block 1 starting on 2026-10-21. However, the current block is essentially the supplied block with identical name, focus and rationale text, so block 1 is not genuinely changed, and Atlas does not appear in its plan. The season also has a chronological error: the Atlas Mountain Race Preparation block runs from March 1 to March 21, 2027, after the February 28 race, and Paris-Brest-Paris in August 2027 is dropped entirely, with the season still ending on 2027-04-04. The response also returns two extra keys (coachQuestion and modelsRemarks) beyond the eight requested, and the season rationale reads as commentary on how the plan was changed. Hard gates failed: block 1 is unchanged.

RETURNED JSON

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, then a 200 km brevet in early April 2027,
and Paris-Brest-Paris in August 2027, with steady pacing, durable aerobic endurance, efficient cadence, and
enough strength to handle hilly terrain.",
    "rationale": "The season now prioritizes the Atlas Mountain Race on 28 February 2027 as the first major
goal, followed by the 200 km brevet in early April and Paris-Brest-Paris in August. The compressed timeline
to February means the aerobic base must be built efficiently, with a focus on repeatable low-intensity
volume, efficient cadence, and strength to handle varied terrain. The first block's aerobic-first
progression remains appropriate, but the winter block will now emphasize cycling-specific endurance and
climbing efficiency rather than cross-training, and the build phase will progress sustained power and long
endurance riding earlier. The final two weeks reduce volume by approximately 40-50% while retaining brief
intensity for race readiness.",

    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

#121

qwen/qwen3-14b

Qwen: Qwen3 14B

7.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	90.0 s	$0.00426	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00598	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.8/2 · Design 0.7/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session with the right date, FTP, TSS and outdoor flags, and it uses the elevated rack or trap-bar pull and two split-squat sets from the plan. The description is thin for a strength session: it gives load as a percent of 1RM without noting that the athlete's 1RM is unknown, and it omits the goblet squat work, the core set details, and any stop condition or progression rule. The rationale names the back-protection and PBP links but does not spell out a concrete loss from skipping beyond general back-injury risk. Season revision: The season goal names the Atlas Mountain Race, and block 1 correctly starts on 2026-10-21 with the null tomorrow, nextWeek and nextBlock kept. However, the season is essentially the old shape: the blocks still end on 2027-04-04, there is no Atlas-specific build or taper before 28 February 2027, and Paris-Brest-Paris in August 2027 is absent from the season. The block weeks are copied unchanged and no block focus or name mentions Atlas, so block 1 is barely changed. Several rationales are meta-commentary about the season remaining valid or the block being unchanged but realigned, and the Thursday session is typed as a workout while marked rest and missed, which is an internal inconsistency.

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week delivered its aerobic purpose without the cadence-specific cycling: Tuesday and
Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

SpaceXAI: Grok 4.20

7.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	22.1 s	$0.0421	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00587	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.0/2 · Grounding 0.9/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned 45-minute moderate gym session on 2026-10-30 with status planned, outdoor false and the correct FTP, and it reflects the plan's Gym Strength B focus on knee-height rack pulls and two split-squat sets. It has good exercise specificity with sets and reps and HR-recovery guidance, but it drifts from the coach's stated 2-set split squat and 3-set goblet squat progression by adding a 3-round structure that conflicts with the 2-set cap, and the lat pulldown and planks are somewhat loosely prescribed. The rationale ties the session to back pain and saddle discomfort, but does not mention the fat-loss goal or the weekly load target, and the mobility circuit is listed as part of the gym session rather than as the separate unrecorded daily habit. Season revision: The response keeps the required eight top-level keys and starts block 1 on 2026-10-21, and it names Atlas in the season goal. However, the season blocks are not re-planned: they still end on 2027-04-04 with a 200 km brevet taper, so the Atlas race on 28 February 2027 and Paris-Brest-Paris in August 2027 are not built into the timeline, and the season rationale claims a full-year stretch that the dates do not show. The current block name, focus and rationale never mention Atlas, and the block is essentially unchanged from the supplied version. The week also rewrites completed past sessions, for example changing Strength A to 45 minutes and the Saturday hike to a generic ride title at 125 minutes, and it gives the missed Thursday session a non-null estimatedFtpWatts of 225 even though past sessions should have that field null. Hard gates failed: block 1 is unchanged.

```
{
  "season": {
    "goal": "Build durable aerobic endurance, efficient cadence above 85 rpm, and consistent low-load strength to comfortably complete the April 200 km brevet, while establishing a sustainable training rhythm you can maintain beyond 4 months toward the Atlas Mountain Race in February 2027 and Paris-Brest-Paris in August 2027.",
    "rationale": "Your updated goal now explicitly includes the Atlas Mountain Race on 28 February 2027 and Paris-Brest-Paris in August 2027, plus the need to complete a randonneur brevet series starting with the 200 km in April. This requires a longer, more sustainable aerobic foundation than a single-event plan. The season therefore retains its aerobic-first structure but stretches the progression across a full year, with conservative 7-week blocks that respect your history of maintaining disciplined training for only 3–4 months at a time. The current Aerobic Base and Strength Foundation block remains the correct starting point because your recent sessions show good aerobic control (HR consistently under 140 bpm) but inconsistent cadence and occasional high-fatigue spikes from races and mixed activities. This block therefore prioritises repeatable easy volume, cadence habit formation, and strength consistency before any threshold work, giving you the durable base needed for both the April brevet and the much longer events that follow.",

qwen/qwen3-vl-30b-a3b-thinking

7.6/12.5

Qwen: Qwen3 VL 30B A3B Thinking

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	D	A	304.4 s	$0.0193	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00635	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.5/2 · Design 0.9/3 · Rationale 1.1/2 · Grounding 1.1/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, workout and moderate fields, 45 minutes, indoor flags and 220 W FTP all match the plan. The session is thin and partly inconsistent: it prescribes three sets of split squats when the week plan caps them at two, it gives only two exercises for a 45-minute gym slot, and it asks for 15-20 seconds of rest between pulls while also asking for 90-120 seconds of rest to hold heart rate down. The rationale and the back and posture grounding are reasonable but somewhat generic, and no load guidance or RPE target is given. Season revision: The response names Atlas in the season goal, season rationale and tomorrow rationale, and block 1 keeps its 2026-10-21 start, but the season is essentially the supplied one with the same blocks and an end date of 2027-04-04, so Paris-Brest-Paris in August 2027 is absent and the Atlas race in February is not the taper target. The block name, focus and week structure are unchanged, so the current block is barely revised to accommodate Atlas. The response also fills tomorrow with an invented 110 percent FTP threshold session even though the request said to keep tomorrow as supplied, which is a clear fidelity breach. Past sessions carry estimatedFtpWatts of 0 rather than null, and the missed Thursday session is typed as a workout with rest intensity, which is a contract inconsistency. Today's session and the week's Sunday run are reasonable, consistent and athlete-grounded, with dry-weather indoor placement and heart-rate ceilings respected.

TODAY PLAN

9.2/12.5

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "Focus on safe hip-hinge mechanics with elevated knee-height rack or trap-bar pulls (3
sets of 10 reps, 15-20 sec rest between sets) and two controlled bodyweight split squats (3 sets of 10 reps
per leg). Prioritize flat-back form to protect your lower back while rebuilding posterior-chain resilience.
Keep heart rate below 130 bpm by taking full 90-120 seconds of rest between sets. This session directly
addresses your cycling posture and back pain by strengthening the glutes and hamstrings without overloading
the quads, which is critical for maintaining a pain-free position during long rides and preventing saddle
discomfort.",
    "optional": false,
    "optionalRationale": "Skipping this session would compromise your ability to safely progress to higher-
intensity cycling and running later in the block. Without reinforcing the elevated hinge mechanics, you risk
re-injuring your lower back during future strength work or endurance sessions, directly undermining your
fat-loss and core-strength goals. The moderate intensity ensures you build resilience without triggering
excessive fatigue or hunger spikes."
  }

keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this session would reduce running-specific durability needed for climbing
efficiency on long rides, but the minimal fatigue cost makes it non-critical today. The main loss is 25 TSS
toward the week's aerobic consistency, which is easily recovered in Week 3.",

cohere/command-a-plus

7.6/12.5

Cohere: Command A+

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	B	240.0 s	$0.0606	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00570	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.0/3 · Rationale 0.6/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON contract is clean and the session matches the planned Friday gym day with correct date, status, indoor flag, duration, and TSS. The description gives concrete sets, reps, and a warm-up, cool-down, and core circuit, but it omits the required heart-rate target for non-cycling work and never mentions the 90-120 second rest or the lower-back stop cues the coach asked for. The optionalRationale is empty and the main rationale is missing entirely, so the reason the session matters toward the fat-loss and hinge-strength goal is not explained. Season revision: The output is valid, keeps block 1 starting on 2026-10-21, names Atlas in the season goal and block rationale, and leaves tomorrow, nextWeek and nextBlock null as required. The season is largely the old one with the same five blocks and dates, so the Atlas race on 28 February 2027 gets no dedicated peak or taper, Paris-Brest-Paris is only mentioned in the goal text, and the roughly six-month span ignores the athlete's stated four-month training ceiling. The block itself is barely changed (same name, focus and week structure, with only a rationale rewrite and small FTP edits), and past sessions in the current week carry an estimatedFtpWatts value of 225 where the instructions require null. Week and today content is coherent and grounded in the supplied activities, forecast and athlete constraints, with a reasonable indoor run and a sensible optional flag.

Qwen: Qwen3 Coder Next

7.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	53.1 s	$0.00669	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00561	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 1.0/2 · Grounding 1.0/2 · Detail 0.7/2

Combined judgment: Today plan: The candidate matches the planned Friday gym session on date, status, type, intensity, duration, indoor flag, TSS and FTP, and it gives a concrete, well-sequenced exercise list with rest guidance and a mobility finish. Its main weakness is the prescription of 30 to 40 kg for Pallof presses, which is implausible and unsafe for an athlete whose goblet squat is 12 kg and whose glute bridges were described as easy, and the 20 kg loaded glute bridge is also an invented load. The rationale ties the session to lower-back protection, lean mass and posture on long rides, but it is somewhat generic and gives no RPE or progression rule to guide load choices. Season revision: The candidate names Atlas in the season goal and rationale but the block 1 name and focus stay unchanged and Atlas never appears in the block plan, week or today rationale, so the required block change for the new goal is missing. Block 1 correctly starts on 2026-10-21 and the earlier blocks were preserved, but the season end date was moved to 2027-08-31 while the season blocks still stop at 2027-04-04, leaving the Paris-Brest-Paris period untiled and breaking the season tiling rule. Block 1 week 1 startDate is also still 2026-10-19 rather than matching the new block start, and the week rationale and today rationale still describe the old brevet-focused plan without any Atlas preparation. Hard gates failed: block 1 is unchanged.

    "bikeWorkout": null,
    "description": "Second gym strength session of the week, focusing on safe posterior-chain reactivation
and core stability. Perform elevated knee-height rack pulls (or trap-bar pulls) for 3 sets of 8–10 reps at a
weight that allows full flat-back hip hinge control, followed by two controlled bodyweight split-squat sets
of 8–10 reps per leg. Include 3 sets of 12 kg goblet squats (hold at 12 kg if third-set quad burn remains
mild), 3 sets of loaded glute bridges (20 kg), 3 sets of Pallof press (30–40 kg per side), and 3 sets of 30–
45 second planks. Take full 90–120 seconds of rest between sets so your heart rate drops below 110 bpm
before each lift, and finish with your 8-minute daily hip/spine mobility circuit.",
    "optional": false,
    "optionalRationale": "Skipping this session would delay your safe return to hip-hinge mechanics and
posterior-chain strength, increasing the risk of lower-back strain during future cycling or hiking—
especially on long climbs where your back already fatigues. This session directly supports your fat-loss
goal by building lean muscle mass (which elevates resting metabolism) and your cycling goal by reinforcing
the core stability needed to maintain a comfortable, upright posture without excessive sit-bone pressure on
long rides."

SEASON REVISION

5.3/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
46.7 s	**$0.00447**	**no**	**yes**	**200**	**stop**

Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 1.0/2 · Grounding 1.0/2 · Detail 0.7/2

Judgment: The candidate names Atlas in the season goal and rationale but the block 1 name and focus stay unchanged and Atlas never appears in the block plan, week or today rationale, so the required block change for the new goal is missing. Block 1 correctly starts on 2026-10-21 and the earlier blocks were preserved, but the season end date was moved to 2027-08-31 while the season blocks still stop at 2027-04-04, leaving the Paris-Brest-Paris period untiled and breaking the season tiling rule. Block 1 week 1 startDate is also still 2026-10-19 rather than matching the new block start, and the week rationale and today rationale still describe the old brevet-focused plan without any Atlas preparation.

RETURNED JSON

```
{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April. Whenever I
have been doing disciplined training, I have only been able to do so and maintain progress for a maximum of
4 months, usually less.",
    "rationale": "The season now explicitly prioritizes the Atlas Mountain Race (AMR) on February 28, 2027
as the primary goal, with Paris-Brest-Paris (PBP) in August 2027 as the secondary long-distance objective.
The 200 km brevet in April serves as a key intermediate benchmark and preparation step. The athlete's
history shows they can maintain disciplined training for only about 4 months at a time, so the plan is
structured in focused 4-month blocks with built-in recovery and cross-training to sustain motivation and
avoid burnout. The current block (Aerobic Base and Strength Foundation) builds the durable aerobic engine
and movement efficiency required for AMR's demanding terrain and duration, while preserving flexibility for
skiing and other winter activities to maintain engagement.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

7.5/12.5

Qwen: Qwen3 VL 30B A3B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	239.1 s	$0.00698	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00624	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.0/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session with the right date, type, intensity and estimated FTP, and it carries forward the plan's elevated pulls, split squats, glute bridges and Pallof work with a safe hinge progression. However, it drops the planned weight and set structure in places: the plan caps split squats at 2 sets and the athlete's 3 goblet squat sets and tight quads are not addressed, and the pull and bridge loads are left vague. The rationale is reasonably specific to hinge control and back safety but does not state the concrete loss in fat-loss or hip-mobility terms, and the 8-minute mobility circuit that the athlete is supposed to do daily is not mentioned in the session. Season revision: The response names Atlas in the season goal and season rationale and keeps block 1 starting on 2026-10-21, but the season block list is copied unchanged, so no Atlas build, Atlas peak or Paris-Brest-Paris phase appears, and the Atlas race on 28 February falls inside the untouched block 3 with no taper or preparation. Block 1 is effectively unchanged from the supplied version, and its rationale is meta commentary that says the block remains unchanged but Week 1 is now aligned. Tomorrow was supplied as null and should have stayed null, yet the response fills it with a detailed indoor ride, which breaks the fidelity instruction. The top-level object also carries coachQuestion and modelsRemarks beyond the eight keys the request lists, while the day-level detail, TSS and FTP values are otherwise consistent with the supplied data. Hard gates failed: block 1 is unchanged.

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

#127

qwen/qwen3.5-9b

7.4/12.5

Qwen: Qwen3.5-9B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	47.2 s	$0.00061	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00638	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 1.1/2 · Grounding 0.9/2 · Detail 0.8/2

Combined judgment: Today plan: The candidate matches the required today object: the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 220 W FTP, 30 TSS and null bikeWorkout all agree with the current plan for the gym session. The description names the elevated rack or trap-bar pull and two bodyweight split-squat sets and gives a sensible 90 to 120 second rest with a heart-rate check, but it gives no sets, reps, loads or exercises for the rest of the 45-minute session, despite the athlete asking for very specific strength workouts. The rationale ties the session to hinge rebuilding and back safety, though it is somewhat generic about what is lost by skipping. Season revision: The answer names Atlas in the season goal, season rationale and block rationale, keeps block 1 starting on 2026-10-21 and returns all eight keys with seven week sessions. However, the season was not truly re-planned: Paris-Brest-Paris in August 2027 is absent from the blocks and the season still ends on 2027-04-04, while the taper and April brevet blocks sit after the Atlas race on 28 February. Tomorrow was populated even though the supplied value was null and should have been kept, the past Thursday session was relabelled with an invented weather cancellation reason, and tomorrow's interval durations sum to 64 minutes against a stated 90. Today's session is detailed and grounded in the rain forecast and heart-rate limits, but several rationales narrate the change (for example the season rationale says the goal now explicitly includes Atlas) rather than stating the plan as it stands.

bytedance-seed/seed-2.0-mini

7.4/12.5

ByteDance Seed: Seed-2.0-Mini

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	55.7 s	$0.00728	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00639	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.9/2 · Design 0.9/3 · Rationale 1.1/2 · Grounding 1.4/2 · Detail 0.7/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, TSS, FTP and null bikeWorkout all match the plan for 2026-10-30. The main weakness is the description, which names the session and rest periods but never lists the exercises, sets, reps or loads, even though the athlete explicitly asked for very specific strength workouts and the plan calls for three goblet squat sets and two split-squat sets. The rationale is reasonably grounded in the back-protection goal and the block focus, but it says skipping only delays progress and gives no concrete loss, and the claim that the session will eliminate back pain overstates it. Rest guidance tied to the heart-rate ceiling is a useful, grounded touch. Season revision: The season block is refreshed with Atlas named in the season goal and rationale, block 1 keeps its 2026-10-21 start, and tomorrow, nextWeek and nextBlock are correctly left null. However, the current block 1 is essentially unchanged: its name, focus, rationale and all seven week targets match the supplied plan, and no week or block rationale mentions Atlas, which fails the requirement for a genuinely changed block 1. The season also lacks an Atlas taper, the post-brevet block has weekCount 20 for a span of about 21 weeks, and the response returns coachQuestion and modelsRemarks although the revision request lists eight keys. The current week and today's session are coherent and grounded in the supplied data, with FTP and bodyMetrics handled correctly.

inception/mercury-2

Inception: Mercury 2

7.4/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	11.9 s	$0.0107	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00570	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 0.9/2 · Grounding 1.0/2 · Detail 0.8/2

Combined judgment: Today plan: The candidate correctly keeps the planned Friday gym session with the right date, status, type, intensity, duration and TSS, and it follows the week's rule of replacing floor deadlifts with elevated pulls and capping split squats at two sets. The exercise list is specific with sets, reps, rest and a flat-back cue, though it omits the lighter goblet squat and the athlete's requested heart-rate-free strength structure is fine. The rationale ties the session to back pain, cycling posture and the 5K goal but does not mention the fat-loss goal or the cost of skipping in terms of hunger control, and the description lacks stop conditions or a fallback if the back aches. Overall it is a sound, grounded session with moderate execution detail. Season revision: The response keeps block 1 starting on 2026-10-21, leaves the blocks that ended before today alone, and returns seven week sessions with a matching today session. Atlas appears only in the season goal; the block name, focus, rationale and weeks never mention it, so block 1 is barely changed and does not prepare for Atlas. The season also drops Paris-Brest-Paris in August 2027, ends on 2027-04-04, and places the brevet-specific block after the February 28 Atlas race, which breaks the chronological logic. Future sessions have null estimatedFtpWatts, including today, although the instructions asked for daily projections, and past sessions were relabelled as planned workouts.

openai/gpt-4.1-mini

7.4/12.5

OpenAI: GPT-4.1 Mini

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	19.3 s	$0.0160	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00601	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.0/2 · Grounding 1.2/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid and matches the requested today object, with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP, 30 TSS and null bikeWorkout for a gym day. The session follows the Strength B plan with elevated pulls and split squats, and the rest guidance respects the athlete's heart-rate and lower-back constraints. However, the description gives no sets, reps, or loads for the pulls and split squats, even though the athlete explicitly asked for very specific strength prescriptions, and it omits stop conditions or a pain fallback. The rationale is grounded in the back and saddle issues but the claimed loss from skipping is somewhat generic. Season revision: The candidate names Atlas in the season goal and keeps block 1 starting on 2026-10-21, but the season blocks are copied unchanged from the old April-brevet plan, so PBP in August 2027 is absent and the Atlas race on 28 February 2027 is not built into the block structure. Block 1 is essentially unchanged apart from rationale wording, which fails the requirement for a genuinely changed block. Contract issues include the Monday rest session carrying status completed instead of rest, and the past missed Thursday session carrying an estimated FTP and a workout type. The day-level content for today is reasonable and grounded in the supplied data, but the overall revision does not reflect the new goal. Hard gates failed: block 1 is unchanged.

7.3/12.5

OpenAI: gpt-oss-20b

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	23.2 s	$0.00018	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00626	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.7/2 · Design 0.8/3 · Rationale 0.3/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON shape, date, planned status, workout type, moderate intensity, 45-minute duration and indoor flags all match the required Friday gym session and the week plan. The exercise selection follows the plan's goblet squat, elevated pull, split squat and core progression, with rest periods and a heart-rate cap that fit the athlete's back concerns. However, optionalRationale is left empty even though the prompt requires the rationale to name the concrete adaptation and the loss from skipping, and the description does not give a stop condition or an explicit assumption for the unknown pull load beyond the 10 kg figure. Season revision: The response keeps the eight top-level keys and the 2026-10-21 start for block 1, and it names Atlas in the season goal and rationale. However, the season blocks are essentially the old brevet-shaped plan ending 2027-04-04, so Atlas on 28 February, the August Paris-Brest-Paris and the brevet series are not actually re-planned. Block 1 is nearly unchanged apart from a trimmed rationale, its name, focus and rationale never mention Atlas, and the rationale contains meta-commentary about what was aligned or adjusted. The today object also carries an extra estimatedFtpWatts field not in its contract, and the completed hike is marked outdoor false despite being an outdoor activity.

Contract 1.2/1.5 · Fidelity 0.7/2 · Design 0.8/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Judgment: The response keeps the eight top-level keys and the 2026-10-21 start for block 1, and it names Atlas in the season goal and rationale. However, the season blocks are essentially the old brevet-shaped plan ending 2027-04-04, so Atlas on 28 February, the August Paris-Brest-Paris and the brevet series are not actually re-planned. Block 1 is nearly unchanged apart from a trimmed rationale, its name, focus and rationale never mention Atlas, and the rationale contains meta-commentary about what was aligned or adjusted. The today object also carries an extra estimatedFtpWatts field not in its contract, and the completed hike is marked outdoor false despite being an outdoor activity.

{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April. Whenever I
have been doing disciplined training, I have only been able to do so and maintain progress for a maximum of
4 months, usually less.",
    "rationale": "The season remains focused on building a durable aerobic base that supports the Atlas
Mountain Race, the 200 km brevet in April, and the Paris-Brest-Paris in August. The plan continues to
emphasize low-intensity, high-volume endurance riding, cadence efficiency, and low-load strength to preserve
recovery. The winter block will incorporate skiing and easy running to maintain aerobic capacity while
limiting concurrent load. The build phase will progress sustained power and long weekend rides, followed by
brevet-specific pacing and fueling practice. The taper will reduce volume while retaining brief intensity to
keep the body primed for the final events.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

7.3/12.5

Qwen: Qwen3 Next 80B A3B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	50.2 s	$0.00895	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00649	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.4/2 · Design 0.5/3 · Rationale 0.7/2 · Grounding 1.2/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid and matches the requested today shape with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and the 30 TSS from the outline. The session follows the plan's Gym Strength B direction with knee-height rack or trap-bar pulls, split squats and Pallof presses, and it respects the 110 bpm rest guidance from the coach analyses. However, it omits the sets and reps the athlete explicitly asked for in strength work for the split squat and plank progressions, leaves the split squat at 2 sets rather than a clear load or tempo, and does not mention the daily 8-minute mobility routine that the coach replies said should be listed explicitly each day. The rationale is specific to the hinge and sit-bone goal but says little about why today rather than later in the week. Season revision: The season goal now carries the athlete's Atlas wording verbatim, but the season blocks are unchanged from the old April 2027 brevet shape, so there is no Atlas build to 28 February 2027 and Paris-Brest-Paris in August 2027 is never planned. Block 1 is effectively the supplied block with only a rewritten rationale, so the required genuinely changed block with Atlas in its name, focus or rationale is missing, which is a hard failure. The request said tomorrow and next week were null or not planned and should stay so, yet the candidate populated both, and the season rationale and tomorrow rationale use meta wording about replacing or remaining unchanged. Its strengths are the coherent current week, the correct 2026-10-21 block start, and reasonable, grounded session detail for the upcoming days. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and low-load strength before introducing limited threshold work. The winter block preserves cycling while using skiing and easy running for cross-training durability. The build phase then progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting work, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

deepseek/deepseek-v4-flash

7.2/12.5

DeepSeek: DeepSeek V4 Flash 0423

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	95.8 s	$0.00262	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00652	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.8/1.5 · Fidelity 1.0/2 · Design 1.4/3 · Rationale 0.2/2 · Grounding 1.2/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON matches the requested shape and date, and the session correctly stays indoors with null bikeWorkout, 45 minutes, moderate intensity and 220 W FTP. The main weakness is that optionalRationale is empty even though the session is not optional, so the required explanation of purpose and what is lost by skipping is missing. The description also prescribes three sets of bodyweight split squats, which contradicts the week plan and the coach reply that cap split squats at two sets. The exercise sets, reps and rest are specific, but there is no load progression, RPE guidance or stop condition beyond a brief note. Season revision: The season names Atlas and block 1 starts on 2026-10-21, and the season tiles through 2027-04-04 with no gaps. However, block 1 is barely changed beyond its rationale and a few target-load strings, and neither the block nor the week mentions Atlas preparation. The season adds a 'mountain-bike' focus the athlete never stated, and its shape runs about six months despite the athlete's stated four-month ceiling, which the rationale only gestures at. The output also adds coachQuestion and modelsRemarks beyond the eight requested top-level keys, marks the Monday rest day as completed instead of rest, and gives past sessions estimatedFtpWatts values inconsistently, against the instruction to leave past sessions null. The rationales for the season and block read as meta-commentary about what was changed.

SEASON REVISION

6.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
91.6 s	**$0.00125**	**no**	**yes**	**200**	**stop**

Contract 0.8/1.5 · Fidelity 1.0/2 · Design 1.4/3 · Rationale 1.0/2 · Grounding 1.2/2 · Detail 1.4/2

Judgment: The season names Atlas and block 1 starts on 2026-10-21, and the season tiles through 2027-04-04 with no gaps. However, block 1 is barely changed beyond its rationale and a few target-load strings, and neither the block nor the week mentions Atlas preparation. The season adds a 'mountain-bike' focus the athlete never stated, and its shape runs about six months despite the athlete's stated four-month ceiling, which the rationale only gestures at. The output also adds coachQuestion and modelsRemarks beyond the eight requested top-level keys, marks the Monday rest day as completed instead of rest, and gives past sessions estimatedFtpWatts values inconsistently, against the instruction to leave past sessions null. The rationales for the season and block read as meta-commentary about what was changed.

pass	$0.00598	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 0.9/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid with the requested today object, correct date, status planned, workout and moderate enums, 45 minutes, indoor flag set correctly for the gym, and a null bikeWorkout. The session matches the plan's Friday Gym Strength B, but the description omits the exact exercises, loads and sets the athlete asked for, and it drops the 22 October feedback that the goblet squat and 3-set caps should be kept, so the programming is less specific than the athlete's request for exact sets and reps. The rationale is grounded in the back and hinge goals but does not mention the fat-loss or fatigue context in detail, and it also lacks an explicit fallback for quad burn or back pain. Season revision: Atlas is named in the season goal, but the season blocks still end on 2027-04-04 and are the old April-brevet shape, with no Atlas-specific block and no Paris-Brest-Paris window, so the season was not really re-planned around the new goal. The current block's name, focus and first week are unchanged and no block rationale mentions Atlas. The response also breaks explicit instructions: nextWeek was supplied as null but was filled with a full detailed week, past sessions carry non-null estimatedFtpWatts values, and the Monday rest day uses status completed instead of rest. The current-week and today detail are concrete and grounded in the recorded activities, with sensible indoor cadence and heart-rate targets for a rainy Sunday.

#135

nvidia/nemotron-3-super-120b-a12b

7.2/12.5

NVIDIA: Nemotron 3 Super

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	151.4 s	$0.00753	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00618	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.6/2 · Design 0.9/3 · Rationale 0.0/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON contract, date, status, planned state, moderate 45-minute indoor gym workout, 30 TSS and 220 W FTP all match the plan and the athlete's gym constraints. The exercise prescription is specific with sets, reps, rest and a heart-rate cap, and it respects the lower-back and quad caveats from recent feedback, though it drops the goblet squat progression the week plan calls for. The major weakness is that optionalRationale is left empty even though the prompt requires today's session purpose and what is lost by skipping it, and detail lacks load progression or stop conditions. Season revision: The output is valid JSON with the required eight keys, block 1 starts on 2026-10-21, and the season goal names the Atlas Mountain Race. However the season was not really re-planned: the block list is unchanged, still ends on 2027-04-04, has no Atlas-specific peak or taper before 28 February 2027, and does not extend to Paris-Brest-Paris in August 2027. Block 1 is essentially unchanged in its name, focus, and weeks, and neither the block, week, nor today rationale mentions Atlas preparation. Some past session records were also altered, such as the Tuesday strength session shortened to 21 minutes and the Wednesday rowing and run merged into one 47-minute entry with an inflated 100 TSS. Hard gates failed: block 1 is unchanged.

Z.ai: GLM 4.6V

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	275.5 s	$0.0224	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00597	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.1/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, and an estimated FTP of 220 W consistent with the plan. The exercise list follows the plan's Gym Strength B direction (knee-height rack pulls, two split-squat sets) but drifts from it by prescribing three split-squat sets of 10-12 per leg, contradicting the two-set cap, and it omits the required rep-based progression guidance tied to the 12 kg goblet squat history. Rest of 90-120 seconds and the upright torso and anti-rotation cues are useful, but the prescription lacks load guidance for the rack pulls and lat pulldowns, and the rationale is somewhat generic about back pain rather than tied to the week's target load. Season revision: The response keeps the eight-key contract, block 1 starts on 2026-10-21, the seven-session week and the today object are consistent, and tomorrow, nextWeek and nextBlock are correctly left null. However, the season blocks are copied unchanged from the old plan: the season still ends 2027-04-04 with a taper for the April brevet, and there is no Atlas build to 28 February 2027 and no Paris-Brest-Paris block in August 2027, even though the goal text names them. Block 1 is essentially unchanged apart from a rewritten rationale, and Atlas appears only in the season goal, a week rationale sentence and an optional rationale, so the block is not genuinely changed for Atlas. The current week and today's session are grounded in the supplied activities and forecast, with sensible indoor placement and heart-rate caps, but the four-month training ceiling is acknowledged in text only and never shapes the season. Hard gates failed: block 1 is unchanged.

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race.",

Magnum v4 72B

7.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	B	247.6 s	$0.0919	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00595	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.6/3 · Rationale 0.7/2 · Grounding 1.2/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid, has only the today root object, and matches the planned 2026-10-30 gym session on date, status, type, intensity, duration, indoor flag, TSS and FTP. The main weakness is the prescription: most exercises list sets but no reps, despite the athlete asking for exact exercises, sets and reps, and the lat pulldown load of 30 kg regresses from the 50 kg the athlete completed last week without explanation. The title B is also too vague, and the loads for glute bridges and Pallof presses are invented without a stated assumption. The rationale is specific to the hinge and posterior-chain goals but its skip-cost sentence is fairly generic. Season revision: The JSON has the eight required keys, seven week sessions, a matching today session, and an empty bodyMetrics array, which is correct. Atlas appears only in the season goal text; the block name, focus, rationale and weeks never name it, so the mechanical Atlas requirement fails and the block is effectively unchanged. The season still ends on 2027-04-04 with the old five-block shape, so Atlas on 28 February 2027 and Paris-Brest-Paris in August 2027 are not built into the season. The block rationale says the structure remains unchanged, which is meta-commentary about the old plan. Block 1 keeps the 2026-10-21 start and the day-level detail for today is reasonable and grounded in the forecast and the 2 h 05 min hike. Hard gates failed: block 1 is unchanged.

TODAY PLAN

  "season": {
    "goal": "Complete a 200 km brevet in early April 2027 with steady pacing, durable aerobic endurance,
efficient cadence, and enough strength to handle hilly terrain. Also prepare for the Atlas Mountain Race on
February 28, 2027 and Paris-Brest-Paris in August 2027.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and
low-load strength before introducing limited threshold work. The winter block preserves cycling while using
skiing and easy running for cross-training durability. The build phase then progresses sustained power and
long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load.
The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

pass	$0.00603	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.1/1.5 · Fidelity 0.7/2 · Design 0.6/3 · Rationale 0.0/2 · Grounding 1.3/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and matches the date, planned status, 45-minute moderate gym workout, 220 W FTP and indoor flags from the plan. The exercise prescription is sensible and reflects the athlete's feedback: elevated hinge pulls, two split-squat sets, glute bridges, Pallof presses, and a heart-rate ceiling below 110 bpm between sets. However, optionalRationale is an empty string even though the prompt requires an explanation of today's purpose and what is lost by skipping it, which is a major omission. The description also lacks load guidance such as starting weight or RPE, and the sets and rest periods do not fully match the plan's 2-minute rest and goblet-squat notes. Season revision: The response is well formed for the eight requested keys, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and gives a concrete, athlete-grounded Sunday run with sensible heart-rate and weather reasoning. Its main weakness is that the season is not really re-planned for the new goal: Atlas appears only in the season goal text, while the block names and season blocks still build to an April 200 km brevet with a taper ending 2027-04-04, and Paris-Brest-Paris in August 2027 is absent. Future sessions also carry estimatedFtpWatts of 0 instead of estimates or null, and the block 1 change is mostly limited to rationale and week focus wording.

qwen/qwen3-30b-a3b-instruct-2507

7.1/12.5

Qwen: Qwen3 30B A3B Instruct 2507

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	68.1 s	$0.00492	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00691	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.4/2 · Design 0.9/3 · Rationale 1.0/2 · Grounding 0.5/2 · Detail 1.2/2

Combined judgment: Today plan: The session choice and execution detail are strong: the hip-hinge pulls, split squats, Pallof presses, planks, rest periods and the heart-rate ceiling fit the Week 1 plan and the athlete's back constraints. The main failure is the status, which is set to completed even though no activity is recorded for 2026-10-30 and the gym session is still only planned, which is a fabricated completion. The rationale is grounded and specific to the back and sit-bone goals, but it does not address the planned goblet squat work the Week 1 plan lists for the gym sessions. Season revision: The response keeps block 1 starting on 2026-10-21, mentions Atlas in the season goal and tomorrow's rationale, and returns all eight keys with seven current-week sessions. However, it breaks several explicit revision instructions: tomorrow, nextWeek and nextBlock were supplied as null and should have stayed null, yet the response fills all three with new plans. The season still builds to an early-April 200 km brevet with a taper after it, so the Atlas race on 28 February 2027 has no taper or recovery and Paris-Brest-Paris in August 2027 is absent from the season blocks. Today's session also invents a completed status and heart-rate observations for a run that was never recorded, and block 1 is essentially unchanged apart from its rationale. Hard gates failed: block 1 is unchanged.

    "date": "2026-10-30",
    "status": "completed",
    "title": "Gym Strength B: Safe Hip Hinge & Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Complete a 45-minute gym session focused on safe posterior-chain activation and core
stability. Begin with a 5-minute dynamic warm-up including leg swings, cat-cow, and bodyweight squats.
```

```
Perform 3 sets of 10 reps of elevated knee-height rack or trap-bar pulls (using 20-25 kg) with 90-120
seconds of rest between sets, emphasizing a flat back and controlled hip hinge. Follow with 2 sets of 12
bodyweight split squats (30 seconds per leg), maintaining a neutral spine and controlled descent. Finish
with 3 sets of 30-second planks (with knees down if needed), 3 sets of 10 Pallof presses per side (light
resistance), and a 5-minute cool-down with hip and spine mobility stretches. Keep your heart rate below 110
bpm between sets to preserve recovery and prevent overloading your lower back.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge mechanics essential for long-term cycling
posture and back protection, directly addressing your chronic lower-back pain and sit-bone discomfort.
Skipping it would compromise your ability to progress safely into heavier strength work and longer endurance
sessions, increasing injury risk and undermining your fat-loss goal by disrupting metabolic consistency. It
is critical to establish this foundation before advancing to higher-volume gym sessions."

SEASON REVISION

5.2/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
64.6 s	**$0.00322**	**no**	**yes**	**200**	**stop**

Contract 1.2/1.5 · Fidelity 0.4/2 · Design 0.9/3 · Rationale 1.0/2 · Grounding 0.5/2 · Detail 1.2/2

Judgment: The response keeps block 1 starting on 2026-10-21, mentions Atlas in the season goal and tomorrow's rationale, and returns all eight keys with seven current-week sessions. However, it breaks several explicit revision instructions: tomorrow, nextWeek and nextBlock were supplied as null and should have stayed null, yet the response fills all three with new plans. The season still builds to an early-April 200 km brevet with a taper after it, so the Atlas race on 28 February 2027 has no taper or recovery and Paris-Brest-Paris in August 2027 is absent from the season blocks. Today's session also invents a completed status and heart-rate observations for a run that was never recorded, and block 1 is essentially unchanged apart from its rationale.

RETURNED JSON

```
{
  "season": {
    "goal": "Complete a 200 km brevet in early April 2027 with steady pacing, durable aerobic endurance,
efficient cadence, and enough strength to handle hilly terrain. Prepare for the Atlas Mountain Race on
February 28, 2027, and Paris-Brest-Paris in August 2027, with consistent training over 4-month blocks.",
    "rationale": "The athlete's updated goal shifts focus from a single brevet to a sequence of long-
distance cycling events, requiring a phased, sustainable training approach. The athlete has a history of
maintaining disciplined training for only 4 months at a time, so the season is structured into three
distinct 4-month blocks: (1) Aerobic Base and Strength Foundation (Oct–Dec 2026), building durable aerobic
fitness and cadence efficiency; (2) Winter Build and Cross-Training (Dec 2026–Jan 2027), maintaining cycling
specificity while using skiing and running for cross-training durability; (3) Endurance and Sustained-Power
Build (Jan–Feb 2027), progressing threshold power and long endurance for the Atlas Mountain Race. The
brevet-specific phase (Mar 2027) and taper (Apr 2027) remain unchanged. The block structure ensures
progressive, manageable load with built-in deloads and recovery, aligning with the athlete's self-reported
limits and performance history. The 225 W FTP baseline is retained as no fresh threshold test justifies a
change.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block remains unchanged from the original plan, as the athlete's recent training
confirms the need for a conservative, aerobic-first approach. The three-hour Zwift race (187 bpm average HR)
and additional strength/pole-vaulting work in Week 1 created significant fatigue, undermining the intended
recovery. This necessitates a cautious rebuild in Week 2, with strict heart-rate control (under 140 bpm),
cadence focus (above 85 rpm from the first minute), and no make-up sessions. The block's purpose is to
establish durable aerobic fitness and consistent cadence before introducing threshold work in Week 3. The
athlete's self-reported limit of 4 months of disciplined training supports this phased, low-risk
progression. The 225 W FTP baseline is retained as no fresh threshold data justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

deepseek/deepseek-chat

7.1/12.5

DeepSeek: DeepSeek V3

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	133.0 s	$0.0119	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00617	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 1.3/2 · Detail 0.8/2

Combined judgment: Today plan: The JSON is clean and the date, planned status, 45-minute duration, moderate intensity, indoor flag, null bikeWorkout and 220 W FTP all match the plan. The description is weak on strength specificity: it prescribes 3 sets of each exercise, which contradicts the plan's cap of 2 bodyweight split-squat sets, and it gives no reps, loads, or progression for the knee-height pulls even though the athlete asked for very specific sets and reps. The rationale is grounded in the hip hinge, back-pain and cycling-posture goals, and the 90 to 120 second rest and below 110 bpm cues come from the coach feedback, but the description lacks stop conditions or fallbacks. Season revision: The season goal and new block names do mention Atlas, and block 1 correctly starts on 2026-10-21 with the later blocks tiling to the season end. However, the Atlas Mountain Race on 28 February 2027 is placed inside a block that ends on 2027-02-28 while the Atlas Preparation block only begins on 2027-04-05, after the race, which is a serious chronological error. Block 1 is essentially the supplied block with its rationale still saying the structure remains unchanged, so it is not a genuinely changed block, and the current week and today session are carried over almost verbatim. The output also adds coachQuestion and modelsRemarks beyond the eight keys requested in the revision, and the rationales still describe the old plan rather than the plan as it stands. Hard gates failed: block 1 is unchanged.

TODAY PLAN

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, Paris-Brest-Paris in August 2027, and a 200 km brevet in April 2027 with steady pacing, durable aerobic endurance, efficient cadence, and enough strength to handle hilly terrain.",
    "rationale": "The season now aligns with the athlete's updated goal of completing the Atlas Mountain Race, Paris-Brest-Paris, and a 200 km brevet. Recent training supports a conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a need to manage fatigue carefully. The first block emphasizes aerobic consistency, cadence, and low-load strength before introducing limited threshold work. The winter block preserves cycling while using skiing and easy running for cross-training durability. The build phase then progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

google/gemma-4-26b-a4b-it

6.9/12.5

Google: Gemma 4 26B A4B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	102.9 s	$0.00411	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00550	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 0.9/2 · Detail 0.5/2

Combined judgment: Today plan: The response is valid JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and a null bikeWorkout, and it matches the Gym Strength B session already in the current plan. The description is the main weakness: it names elevated pulls and two split squat sets but gives no sets, reps, loads, or exercise list for the pulls, which falls short of the athlete's explicit request for very specific strength workouts. The rationale ties the session to posterior-chain and lower-back goals but does not state a concrete loss from skipping, and optional is correctly false. Season revision: The season goal was updated to name Atlas and the block starts on 2026-10-21, which meets the hard requirements. However, the season blocks were not re-planned for the Atlas race, PBP, or the brevet series: the old 200 km April plan is kept and the season still ends 2027-04-04, so Atlas on 28 February is not built toward and PBP in August is absent. The tomorrow object was altered from null to a near-empty workout object rather than kept as supplied, and week sessions for the days after today remain generic, with the weekly rationale still describing the replaced plan. The week's Wednesday session was merged and the today alternatives text was duplicated, which weakens coherence and detail.

```
{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April. Whenever I
have been doing disciplined training, I have only been able to do so and maintain progress for a maximum of
4 months, usually less.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block emphasizes aerobic consistency, cadence, and low-load
strength before introducing limited threshold work. The winter block preserves cycling while using skiing
and easy running for cross-training durability. The build phase then progresses sustained power and long
endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The
final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

mistralai/mixtral-8x22b-instruct

6.9/12.5

Mistral: Mixtral 8x22B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	20.1 s	$0.0792	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00611	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.5/2 · Design 0.8/3 · Rationale 0.9/2 · Grounding 0.7/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and matches the planned Friday gym session on 2026-10-30 with the correct indoor flags, 45 minutes, moderate intensity, 30 TSS, and 220 W FTP. The rationale ties the session to lower-back resilience and saddle discomfort, and the description reuses the coach's prior heart-rate rest guidance. However, the athlete explicitly asked for very specific strength workouts with exercises, sets, and reps, and the description gives no sets or reps for the pulls or anti-rotation work, omits the goblet squat and pulldown work from the week, and offers no load progression or stop conditions. Season revision: Atlas appears only in the season goal text; the season block list still ends on 2027-04-04 with no Paris-Brest-Paris window, and the block name, focus and rationale never mention Atlas, so block 1 is essentially unchanged and the design does not build toward the 28 February 2027 race. The day-of-week labels are shifted by one day throughout the week (26 October 2026 is a Monday, not a Sunday), and today's 1 November session is marked completed with a 'Completed: 30 minutes' note even though no such activity was recorded, which invents training data. Rationale text also includes meta-commentary such as 'remains unchanged', and the outline and today detail are otherwise reasonable and consistent with the athlete's aerobic and cadence constraints. Hard gates failed: block 1 is unchanged.

qwen/qwen3-coder-30b-a3b-instruct

6.8/12.5

Qwen: Qwen3 Coder 30B A3B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	208.0 s	$0.00353	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00633	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.1/2 · Detail 0.5/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 30 TSS and 220 W FTP from the plan. The description is the main weakness: it names only the plan's themes (elevated pulls, split squats) and gives no exercises, sets, reps, loads, rest periods or stop conditions, even though the athlete explicitly asked for very specific strength workouts and the athlete's feedback about quad burn and rest between sets was available to use. The rationale ties the session to back pain and saddle discomfort reasonably well but leans on generic phrasing, and it does not draw on the recent comments about quad fatigue or the athlete's heart-rate-driven rest guidance. Season revision: The response returns the eight required keys with seven week sessions and keeps block 1 starting on 2026-10-21, and the season blocks tile to 2027-04-04. Atlas appears only in the season goal text: no block name, focus or rationale is re-planned for Atlas, Paris-Brest-Paris is absent from the block structure, and block 1 is effectively unchanged from the supplied version. Fidelity is weakened because tomorrow and nextWeek were supplied as null but the response fills them in, and past sessions carry estimatedFtpWatts values where the instructions require null. Several rationales use meta language such as has been updated and remain unchanged, and some TSS estimates look inflated (for example a 60-minute easy indoor ride at 100 TSS). Hard gates failed: block 1 is unchanged.

Contract 1.2/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.1/2 · Detail 1.2/2

Judgment: The response returns the eight required keys with seven week sessions and keeps block 1 starting on 2026-10-21, and the season blocks tile to 2027-04-04. Atlas appears only in the season goal text: no block name, focus or rationale is re-planned for Atlas, Paris-Brest-Paris is absent from the block structure, and block 1 is effectively unchanged from the supplied version. Fidelity is weakened because tomorrow and nextWeek were supplied as null but the response fills them in, and past sessions carry estimatedFtpWatts values where the instructions require null. Several rationales use meta language such as has been updated and remain unchanged, and some TSS estimates look inflated (for example a 60-minute easy indoor ride at 100 TSS).

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

thedrummer/cydonia-24b-v4.1

6.8/12.5

TheDrummer: Cydonia 24B V4.1

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	235.6 s	$0.0108	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00607	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 0.9/2 · Detail 0.4/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned Friday gym session on 2026-10-30 in date, status, type, intensity, duration, indoor flag, TSS and FTP. The description is the main weakness: it names only the pulls and split squats and gives no exercises, sets, reps, rest periods, load guidance or heart-rate stop conditions, even though the athlete explicitly asked for very specific strength workouts and the coach had set 90 to 120 seconds rest with heart rate below 110 before sets. The optionalRationale ties the session to back pain, saddle discomfort and core stability, which is reasonable, but the fat-loss sentence is generic and the rationale does not reference the athlete's recent gym feedback. Season revision: The output is valid, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and names Atlas in the season goal and rationale. However, the season blocks are essentially the old ones with no Atlas-specific block, the season still ends on 2027-04-04 so Atlas and Paris-Brest-Paris are not planned, and the current block's name, focus and rationale do not mention Atlas, so block 1 is barely changed. The Thursday 2026-10-29 session was rewritten into a prescribed indoor ride whose intervals total 36 minutes against a 60-minute description, and it carries a TSS for a session marked missed. Past-day descriptions were also reworded, and today's description has rationale sentences appended to it. Hard gates failed: block 1 is unchanged.

    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 steps per minute. Keep the effort conversational from the
first minute and let pace fall away rather than pushing heart rate up on any incline. Indoors because rain
and 7 m/s gusts are forecast through the day. This closes a week whose aerobic ceiling was respected on
every session, so the aim is to keep the week's shape without adding load before Week 3's first controlled
threshold stimulus. Thirty easy minutes maintains the running-specific durability that supports your cycling
base through the winter and costs almost nothing in fatigue the day after a 2 h 05 min hike.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This session closes out a week that has successfully maintained aerobic control while
rebuilding from the previous week's higher load. The 30-minute easy run serves to maintain running-specific
durability at minimal cost, keeping the week's total load conservative before introducing a controlled
threshold stimulus in the following week. The session is designed to be easy and conversational, with a
focus on maintaining a relaxed cadence and heart rate within the target zone. The indoor location is chosen
due to the forecast of rain and strong gusts, which would make outdoor running less comfortable.",
    "optional": false,
    "optionalRationale": "This session builds the running-specific durability that supports your cycling
base through the winter. Skipping it would mean losing that specific adaptation, which is important for
maintaining overall athletic durability.",

inception/mercury-2.5

6.7/12.5

Inception: Mercury 2.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	25.4 s	$0.00337	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00600	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.4/2 · Design 0.5/3 · Rationale 0.2/2 · Grounding 1.1/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP and a TSS of 30, matching the current week plan for Friday. The session design is sensible, with knee-height pulls, split squats and anti-rotation work with clear sets, reps and rest, and it respects the heart-rate cap from the coach. However, optionalRationale is left empty even though optional is false and the prompt requires an explanation of the session's purpose against the season goal and the loss from skipping it, and the description never states that purpose. Loads are not specified and the daily mobility circuit is not mentioned, which limits execution detail. Season revision: The response keeps the eight top-level keys and block 1 starting on 2026-10-21, and it names Atlas in the season goal and rationale. However, block 1 is essentially unchanged: its name, focus, weeks and rationale are carried over, and nothing in the block or its weeks prepares the athlete for Atlas. The season lists only block 1 and keeps the old endDate of 2027-04-04, so the Atlas-to-PBP season is not re-planned, blocks do not tile through the season end, and Paris-Brest-Paris is absent from the block structure. The block rationale also contains meta-commentary about what remains unchanged and what was realigned, which the prompt forbids, and the Monday rest session was relabelled from rest to completed status. The current week and today's session are coherent and grounded in the supplied activities, but they do not reflect the new goal.

TODAY PLAN

8.4/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
6.5 s	$0.00101	no	yes	200	stop

Contract 1.4/1.5 · Fidelity 1.9/2 · Design 2.2/3 · Rationale 0.2/2 · Grounding 1.6/2 · Detail 1.1/2

Judgment: The JSON is valid, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP and a TSS of 30, matching the current week plan for Friday. The session design is sensible, with knee-height pulls, split squats and anti-rotation work with clear sets, reps and rest, and it respects the heart-rate cap from the coach. However, optionalRationale is left empty even though optional is false and the prompt requires an explanation of the session's purpose against the season goal and the loss from skipping it, and the description never states that purpose. Loads are not specified and the daily mobility circuit is not mentioned, which limits execution detail.

SEASON REVISION

4.9/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
19.0 s	**$0.00236**	**yes (2 attempts)**	**yes**	**200**	**stop**

Contract 1.2/1.5 · Fidelity 0.4/2 · Design 0.5/3 · Rationale 0.7/2 · Grounding 1.1/2 · Detail 1.0/2

Judgment: The response keeps the eight top-level keys and block 1 starting on 2026-10-21, and it names Atlas in the season goal and rationale. However, block 1 is essentially unchanged: its name, focus, weeks and rationale are carried over, and nothing in the block or its weeks prepares the athlete for Atlas. The season lists only block 1 and keeps the old endDate of 2027-04-04, so the Atlas-to-PBP season is not re-planned, blocks do not tile through the season end, and Paris-Brest-Paris is absent from the block structure. The block rationale also contains meta-commentary about what remains unchanged and what was realigned, which the prompt forbids, and the Monday rest session was relabelled from rest to completed status. The current week and today's session are coherent and grounded in the supplied activities, but they do not reflect the new goal.

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue.",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control.",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

google/gemma-3-27b-it

Google: Gemma 3 27B

6.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	161.4 s	$0.00430	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00518	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.8/1.5 · Fidelity 0.5/2 · Design 1.0/3 · Rationale 0.5/2 · Grounding 0.9/2 · Detail 0.5/2

Combined judgment: Today plan: The candidate returns the correct today object for 2026-10-30 as a planned moderate 45-minute indoor gym workout with no bike workout and correct TSS and FTP, matching the current week plan. The exercise selection follows the plan's Gym B progression (rack pulls, two split-squat sets, Pallof and planks) and gives rest guidance, though it omits the explicit weight, load progression and the 110-120 second rest tie-in, and the rep ranges are broader than the athlete's requested very specific prescription. The rationale is tied to back pain and posture but is somewhat generic and does not mention the fat-loss goal or the hunger-control context that the block depends on. Season revision: The season names Atlas and adds an Atlas Mountain Race Preparation block, but that block is dated 2027-03-01 to 2027-02-28, which is an inverted range, and it overlaps the brevet block with the same start date, so the season does not tile. Block 1 is kept starting 2026-10-21 and the current week's sessions are mostly reproduced as supplied, but the block plan itself is largely generic (e.g. Week 1 focus renamed to Recovery and Aerobic Rebuild) and does not mention Atlas. Tomorrow's session was filled in although tomorrow was supplied as not planned, and the today rationale and the tomorrow session still carry the old season logic with no Atlas-specific reasoning, while the week's completed-session statuses and estimated TSS for past days were left unreviewed.

Mistral: Codestral 2508

6.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	26.9 s	$0.00441	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00605	anthropic/claude-haiku-5.5

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	pass	pass

Hard gates: the response never mentions Atlas

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.3/2 · Design 0.4/3 · Rationale 0.6/2 · Grounding 0.9/2 · Detail 0.8/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, and the date, planned status, 45-minute moderate gym workout, indoor flag, 220 W FTP, and TSS of 30 all agree with the plan. The session is sensibly built around the hinge, core, and glute work with 90 to 120 seconds of rest, but it drops the goblet squats that the week plan says to hold at three sets, and it gives no load guidance, RPE, or stop conditions for the rack pulls. The optionalRationale ties the session to back pain and saddle discomfort, though the explanation of the loss from skipping is somewhat generic. Season revision: The response is valid JSON with the eight keys, seven week sessions and correctly null tomorrow, nextWeek and nextBlock, and block 1 does start on 2026-10-21. However, Atlas is never mentioned anywhere: the season goal still reads as the 200 km brevet, the Paris-Brest-Paris target is absent, and blocks 2 to 5 are copied unchanged, so the survey adjustment was not applied and block 1 is effectively unchanged. Several session day names are wrong (for example 2026-10-26 is labelled Wednesday and 2026-11-01 is labelled Tuesday), and the block and week rationales are meta-commentary about what remains unchanged or was realigned. Hard gates failed: the response never mentions Atlas.

{
  "season": {
    "goal": "Complete a 200 km brevet in early April 2027 with steady pacing, durable aerobic endurance, efficient cadence, and enough strength to handle hilly terrain.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and low-load strength before introducing limited threshold work. The winter block preserves cycling while using skiing and easy running for cross-training durability. The build phase then progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

#148

meta-llama/llama-4-maverick

6.7/12.5

Meta: Llama 4 Maverick

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	143.2 s	$0.00707	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00637	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 0.9/2 · Grounding 0.5/2 · Detail 0.8/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 30 TSS, 220 W FTP and null bikeWorkout all match the plan for Friday. The description is weak for an athlete who asked for very specific strength prescriptions: it names only the pulls and two split-squat sets and never lists the full exercise order, sets, reps or load guidance. The rationale and grounding are good, tying the session to the hip-hinge work, the back protection goal and the posterior-chain focus, with the 90 to 120 second rest and below 110 bpm cue taken from the coach feedback. Stop conditions and progression rules are largely absent. Season revision: The season does name the Atlas Mountain Race and the blocks tile without gaps, and block 1 keeps its 2026-10-21 start with bodyMetrics correctly empty. However, the Atlas chronology is broken: the Atlas Mountain Race Preparation block runs 2027-03-01 to 03-21, after the 28 February race, and the taper is labelled as preceding Atlas. Block 1 itself is essentially unchanged apart from a rewritten rationale, and neither its name nor its rationale mentions Atlas, so the block revision requirement is weakly met. The candidate also fabricates today's completion, marking the 1 November run as completed with done-as-planned wording although no activity was recorded for that day, and it rewrites the past Thursday 29 October from no recorded activity into a planned and missed indoor ride with an FTP value. The Monday rest day is marked completed instead of rest.

TODAY PLAN

6.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	277.1 s	$0.0153	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00611	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.9/2 · Design 1.2/3 · Rationale 0.4/2 · Grounding 1.2/2 · Detail 0.9/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned gym session on 2026-10-30 with the right type, intensity, duration, indoor flag and FTP, and it ties the session to the elevated pull and split squat plan. However, the description lacks the exact sets, reps and loads the athlete asked for in strength workouts, and it omits the explicit two bodyweight split squat sets and the goblet squat progression from the week plan. The optionalRationale is empty even though optional is false, and the rationale does not explain the adaptation or the concrete loss from skipping the session toward the fat-loss and back-strength goals. Season revision: The candidate names Atlas in the season goal and the Atlas Build block, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and gives a coherent Sunday session with a sensible rationale. However, the season drops the April 200 km brevet entirely, since the Recovery and Transition block runs from March 1 and no block covers April, and the Atlas Build block ends on race day (2027-02-28) with no taper before the event. Block 5 also lists weekCount 16 for a span of about 14 weeks, and the block 1 changes are minimal beyond a new rationale. The response also returns ten top-level keys including coachQuestion and modelsRemarks, and it adds unsupported details such as recent testing and heat acclimation.

mistralai/mistral-small-3.2-24b-instruct

6.4/12.5

Mistral: Mistral Small 3.2 24B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	78.4 s	$0.00373	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00566	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 1.2/2 · Detail 0.7/2

Combined judgment: Today plan: The response is valid JSON with the requested today shape, correct date, planned status, workout type and moderate intensity, and it keeps the gym session indoors with bikeWorkout null, which fits the plan. However, the description is thin: it names the planned exercises but gives no sets, reps, loads, or explicit goblet squat and hinge prescription, despite the athlete asking for very specific strength workouts with exercises, sets and reps. The rationale ties to back pain and saddle discomfort but overstates the metabolic benefit and lacks a concrete statement of what is lost by skipping, and the candidate ignores the coach note to keep split squats to two bodyweight sets and the 90 to 120 second rest and below 110 bpm cue only partially. Season revision: The response keeps block 1 starting on 2026-10-21, keeps the seven-session week and the matching today session, and leaves tomorrow, nextWeek and nextBlock null. It mentions Atlas only in the season goal and rationale; the block plan, block rationale and weeks never name or prepare for Atlas, so the survey change was not really worked into the plan. The season still ends on 2027-04-04 with the original five blocks, so Paris-Brest-Paris in August 2027 is absent and the season was not re-planned to cover the new goals. The optionalRationale refers to a marathon, which the athlete never mentioned, and the season rationale reads as commentary on what changed rather than the plan as it stands. Today's session and the week's sessions are reasonable and grounded in the supplied activities, forecast and weekly note.

SEASON REVISION

5.9/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
70.9 s	**$0.00221**	**no**	**yes**	**200**	**stop**

Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 1.2/2 · Detail 1.1/2

Judgment: The response keeps block 1 starting on 2026-10-21, keeps the seven-session week and the matching today session, and leaves tomorrow, nextWeek and nextBlock null. It mentions Atlas only in the season goal and rationale; the block plan, block rationale and weeks never name or prepare for Atlas, so the survey change was not really worked into the plan. The season still ends on 2027-04-04 with the original five blocks, so Paris-Brest-Paris in August 2027 is absent and the season was not re-planned to cover the new goals. The optionalRationale refers to a marathon, which the athlete never mentioned, and the season rationale reads as commentary on what changed rather than the plan as it stands. Today's session and the week's sessions are reasonable and grounded in the supplied activities, forecast and weekly note.

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

meta-llama/llama-3.3-70b-instruct

6.4/12.5

Meta: Llama 3.3 70B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	39.2 s	$0.00570	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00545	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.0/2 · Detail 0.6/2

Combined judgment: Today plan: The JSON is clean and matches today's date, planned status, indoor gym workout, 45 minutes, moderate intensity, 220 W FTP and 30 TSS from the current week plan. The description is weak on execution: it names the pulls and split squats but gives no exercises, sets, reps, loads or RPE guidance, even though the athlete explicitly asked for very specific strength workouts. The rationale is generic, saying it builds a foundation and prevents injury, without naming the concrete adaptation for the hinge and back-strength goal or what is lost by skipping. Season revision: The season is refreshed to name Atlas and PBP and block 1 keeps its 2026-10-21 start, but the candidate fails to make block 1 genuinely changed: its focus, weeks and targetLoad are copied from the supplied plan with no Atlas preparation. The week's day labels are wrong (2026-10-26 is a Monday, not Tuesday, and 2026-11-01 is a Sunday, not Monday), the Sunday date is misattributed, and the week's sessions for dates before today are reshaped (Thursday strength work is shown as Thursday rowing, Friday's missed slot is retitled). The season tiling extends to 2027-08-31 with a generic PBP block of 21 weeks, which is vague, and the season ignores the Atlas build beyond relabelling the goal. Today's session is kept from the supplied plan, which is acceptable, but the rationale for today still refers to the old plan's structure rather than a revised Atlas-driven design, and the output has no Atlas-specific training content anywhere in the block or week.

#152

mistralai/ministral-3b-2512

6.3/12.5

Mistral: Ministral 3 3B 2512

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	18.8 s	$0.00336	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00563	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 0.5/2 · Design 0.9/3 · Rationale 0.8/2 · Grounding 0.7/2 · Detail 0.5/2

Combined judgment: Today plan: The session content is sensible and grounded in the plan: Gym Strength B with elevated rack or trap-bar pulls, two bodyweight split-squat sets, Pallof presses, planks, and rest guidance that matches the coach's 90 to 120 second recovery cue. The main failure is fidelity: the status is marked completed even though no activity is recorded for 2026-10-30, so the planned session is misrepresented as done. The 30 to 40 kg pull loads are invented without a stated assumption, and the description never names a fallback for pain or equipment, though the rationale ties the session well to the back and hip goals. Season revision: The season goal and rationale name Atlas and PBP, but the season blocks are unchanged from the old 200 km-only shape, so the season was not genuinely re-planned around Atlas on 28 February 2027 and the block 5 taper still ends on the April brevet. Block 1 is not materially changed and does not mention Atlas, and the block rationale is largely meta commentary about the update. Week 2 sessions were rewritten with completion notes for past days and Tuesday and Wednesday titles were altered, while today's session replaced the description and drifted from the supplied rationale, and the tomorrow session was filled in with a strength day that the week outline did not specify. Tomorrow and today statuses are inconsistent, and the candidate ignored the rain forecast by making Sunday session indoor without stating weather compliance for Monday onward. Overall it is a partial refresh that fails the hard Atlas requirement for the plan shape.

TODAY PLAN

8.3/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
2.1 s	$0.00164	no	yes	200	stop

Contract 1.4/1.5 · Fidelity 0.6/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.1/2 · Detail 1.4/2

Judgment: The session content is sensible and grounded in the plan: Gym Strength B with elevated rack or trap-bar pulls, two bodyweight split-squat sets, Pallof presses, planks, and rest guidance that matches the coach's 90 to 120 second recovery cue. The main failure is fidelity: the status is marked completed even though no activity is recorded for 2026-10-30, so the planned session is misrepresented as done. The 30 to 40 kg pull loads are invented without a stated assumption, and the description never names a fallback for pain or equipment, though the rationale ties the session well to the back and hip goals.

  "today": {
```

```
    "date": "2026-11-01",
    "type": "workout",
    "title": "Short Easy Aerobic Run",
    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 spm. Keep the effort conversational from the first minute
and let pace fall away rather than pushing heart rate up on any incline. Completed: 30 minutes of running
with heart rate averaging 115-135 bpm and cadence around 165-170 spm. The session was indoors due to
forecasted rain and strong gusts, and the effort felt well controlled and aerobic.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "completed",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm; If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This session closes a week of controlled aerobic efforts, ensuring fatigue remains low and
the athlete arrives at Week 3's threshold stimulus fresh. The focus on cadence above 85 rpm and heart-rate
control is critical for the 200 km brevet's efficiency. The short run maintains running-specific durability
with minimal fatigue cost, and the week's structure avoids adding load before the threshold work of Week 3.
The forecasted rain and strong gusts justify the indoor run, and the 115-135 bpm ceiling ensures aerobic
consistency.",
    "optional": false,
    "optionalRationale": "The cost of skipping this session is minimal—it simply maintains running-specific
durability without adding fatigue. However, the session is essential for the week's shape and the upcoming
threshold work in Week 3.",

qwen/qwen3-coder-flash

6.2/12.5

Qwen: Qwen3 Coder Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	53.8 s	$0.0105	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00594	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.1/1.5 · Fidelity 0.5/2 · Design 0.6/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 0.6/2

Combined judgment: Today plan: The response correctly keeps today as a planned gym session dated 2026-10-30 with the planned moderate 45-minute duration, FTP 220 W and a TSS near the plan value, and it is valid JSON with the requested shape. However, the description is thin for a session the athlete wants with very specific exercises, sets and reps: it names elevated pulls and two split-squat sets but gives no full exercise list, no sets or reps, no rest periods and no heart-rate or RPE guidance despite the coach's own notes about 90-120 seconds rest and keeping heart rate below 110 before sets. The rationale is reasonable and ties to posterior-chain safety and fat-loss, but it does not address the athlete's specific hunger and evening-eating goals or state what is lost in fat-loss terms, and the claim about higher-intensity training later is generic. Season revision: The response names Atlas and Paris-Brest-Paris in the season goal, but the block plan never mentions Atlas: the season blocks, their names and focus, and the current block are essentially unchanged, so block 1 is not genuinely changed and no Atlas build to the 28 February 2027 race is designed. It also violates the null-preservation rule by filling in tomorrow and nextWeek when the input supplied them as null, and the season rationale reads as meta-commentary about updating the goal. Strengths are the valid eight-key JSON, correct block 1 start date of 2026-10-21, sensible easy week outlines with cadence and heart-rate cues, and a coherent 2026-11-01 run that respects the rain and gust forecast. Hard gates failed: block 1 is unchanged.

TODAY PLAN

cohere/command-a

Cohere: Command A

6.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	100.5 s	$0.1052	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00511	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.7/2 · Grounding 0.9/2 · Detail 0.6/2

Combined judgment: Today plan: The response is valid JSON with the requested today shape and matches the date, planned status, workout type and 45-minute moderate intensity from the plan. The description names the right exercises and rest cues but gives no sets, reps, loads, or exercise-by-exercise prescription, despite the athlete asking for very specific strength workouts with exact exercises, sets and reps. The rationale ties the session to back safety and hip hinge, but it does not name the week's target load or the cost to the fat-loss goal, and it leaves out the daily mobility routine that the plan pairs with each day. Season revision: The candidate names Atlas in the season goal and adds an Atlas Mountain Race Preparation block, and block 1 still starts on 2026-10-21, so the hard checks pass. However, the season ends 2027-08-22 rather than covering through Paris-Brest-Paris in August as intended, and the Atlas block is not clearly tied to its 28 February date beyond its dates. The week 1 block entry still carries the start date 2026-10-19 and the block's week 1 is not truly changed, while the current week silently rewrote Thursday from missed to a planned indoor ride and changed the past session statuses despite that day being in the past, which breaks the rule that past days are not re-proposed. The Sunday run was left as planned, but the week's rationale is generic meta-language about the old plan, and the block rationale says the block remains unchanged in substance, so the revision is thin.

TODAY PLAN

qwen/qwen-2.5-72b-instruct

6.1/12.5

Qwen2.5 72B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	188.7 s	$0.0118	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00578	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.5/2 · Design 0.6/3 · Rationale 0.7/2 · Grounding 1.2/2 · Detail 0.3/2

Combined judgment: Today plan: The JSON is valid and the today object matches the planned 2026-10-30 Gym session with correct type, intensity, duration, indoor flags, planned status and FTP. The description says to perform the following exercises but then lists none, so there are no exercises, sets, reps, loads or stop conditions, which the athlete explicitly asked for in strength work. The rationale ties the session to core stability and back protection but is fairly generic and does not reference the goblet squat, pull and split squat progression set out in the block plan. Season revision: The JSON has the eight required keys, block 1 starts on 2026-10-21, the past blocks and the unchanged next-day nulls are respected, and Atlas appears in the season goal. However, the block is explicitly described as unchanged, and its name, focus, rationale and week targets never mention Atlas, so the mandatory genuinely-changed block 1 requirement fails. The season blocks still end in an April 2027 brevet taper, with no Atlas peak on 28 February 2027 and no Paris-Brest-Paris in August 2027, and the season rationale is meta commentary about having been adjusted.

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

HARD GATES	JUDGE COST	JUDGED
pass	$0.00643	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.5/2 · Design 0.9/3 · Rationale 1.1/2 · Grounding 0.7/2 · Detail 0.5/2

Combined judgment: Today plan: The status, type, intensity, 45-minute duration, indoor flag and FTP match the planned Friday gym session, and the JSON shape is correct. However, the candidate attaches a bikeWorkout with six 10-minute blocks at 70 percent FTP, which is a cycling prescription for a gym day; its intervals total about 70 minutes, contradicting the 45-minute duration, and the prompt requires bikeWorkout to be null for non-bike sessions. The description names the exercises but gives no sets, reps, loads, rest periods or heart-rate gating despite the athlete asking for very specific strength prescriptions, and it omits the 90 to 120 second rest and below 110 bpm start condition the coach set for this week. The rationale ties the session to back pain and cycling posture, which is grounded, but it is somewhat generic. Season revision: The JSON has the eight required keys, seven sessions, the block 1 start of 2026-10-21, and a contiguous season tiling to 2027-08-31, and the season rationale does name the Atlas Mountain Race. However, Atlas is not built into the plan: the Atlas date of 28 February 2027 falls inside the old endurance block with no taper or race-specific week before it, block 1 is essentially unchanged apart from its rationale, and the plan runs continuously for about ten months despite the athlete's four-month ceiling. Fidelity fails because tomorrow was supplied as null but a full Controlled Threshold Intervals session was invented, and today's session was marked completed with a claim that the athlete finished it as planned even though no activity for 2026-11-01 was recorded. The weekly and session detail is concrete and the prescribed power targets are consistent with the 225 W FTP.

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 0.3/2 · Detail 0.3/2

Combined judgment: Today plan: The JSON is valid and has the requested today fields with correct date, type, intensity and estimated FTP. However, the status is set to completed even though no activity is recorded for 2026-10-30 and the plan lists the session as planned, so the response invents a completed workout. The description then borrows the 102 bpm heart rate and rest-interval details from the 2026-10-27 strength session, which is an ungrounded claim. The description also gives no exercises, sets, reps, loads or rest targets for a session the athlete asked to be very specific, so it offers little execution guidance. Season revision: The response names Atlas in the season goal, season rationale and block rationale, keeps block 1 starting on 2026-10-21, returns seven sessions with a matching today object, leaves tomorrow, nextWeek and nextBlock null, and returns an empty bodyMetrics array, which is correct. However, block 1 is barely changed: its weeks and focus are copied from the supplied plan with no Atlas-specific preparation, and the season places the Atlas race at the start of a block named Taper and Execution that runs after the race, so no taper precedes the February 28 event. The season and block rationales open with meta-commentary about an updated goal, which the instructions forbid, and several week sessions carry altered TSS and duration figures (for example Tuesday rowing TSS changed from 70 to 20) without basis. Monday rest is marked completed rather than rest.

deepseek/deepseek-chat-v3.1

5.8/12.5

DeepSeek: DeepSeek V3.1

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	85.9 s	$0.00954	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00608	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.3/2 · Design 1.0/3 · Rationale 1.1/2 · Grounding 0.3/2 · Detail 0.5/2

Combined judgment: Today plan: The JSON is valid and has the required fields, and the date, workout type, moderate intensity and 45-minute duration match the planned Friday gym session. However, the status is marked completed and the description says you completed the session, but no activity for 2026-10-30 is recorded, so this invents a completed workout and should have stayed planned. The description gives no exercises, sets, reps, rest periods or load guidance despite the athlete asking for very specific strength workouts, and the rationale is reasonable but generic about posture and back protection. Season revision: The response names Atlas in the season goal, season rationale, block 2 and the block 1 rationale, keeps block 1 starting on 2026-10-21, and the season blocks tile from 2026-10-21 to 2027-08-31. However, block 1 is barely changed: its name, focus, weeks and targets are carried over, with only the rationale rewritten, so the requirement for a genuinely changed block 1 is weakly met. The season ignores the athlete's stated four-month ceiling, running about 43 continuous weeks of disciplined work with no reset block. Today's rationale refers to a tomorrow cadence ride that does not exist, the Monday rest day is marked completed rather than rest, and the Wednesday session was merged and altered without a clear basis.

xiaomi/mimo-v2.5

5.7/12.5

Xiaomi: MiMo-V2.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	E	A+	619.9 s	$0.00805	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00307	anthropic/claude-haiku-5.5

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate is valid JSON with only the requested today object, status planned matches the absence of any recorded activity for 2026-10-30, and the Gym session at 45 minutes, moderate, indoor with TSS 30 and FTP 220 follows the plan. The exercise list is well chosen for this athlete: elevated rack pulls replace floor deadlifts, goblet squats stay at 12 kg with the two-minute rest rule, split squats are capped at two sets, and lat pulldown, glute bridge, Pallof and plank are included, with the heart-rate gate below 110 bpm taken from the coach feedback. The rationale ties the session to the hip hinge, back durability and sit-bone goals, though the lean-muscle claim is loosely supported. Detail is good on sets, reps, rest and form cues but lacks explicit RPE or rep-in-reserve guidance and a clear stop rule beyond you can stop anytime, and the rest instructions are slightly inconsistent (90-120 s versus two minutes before set three). Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

```

```
    "bikeWorkout": null,
    "description": "Gym session B of the week (rainy, 7-10 °C day — indoors regardless). Warm-up: 5 min easy bike or rower plus 10 bodyweight squats, leg swings and 10 slow cat-cow. Main circuit, 90-120 s rest between all sets, waiting until your heart rate drops below 110 bpm before lifting: (1) Knee-height rack pulls or trap-bar pulls from knee-height blocks: 3 x 8 at a light, controlled load you can stop anytime — flat back, drive through the hips, no rounding; (2) Goblet squat: 3 x 10 at 12 kg, full 2 min rest before the third set until the late-set quad burn fades; (3) Bodyweight split squat: 2 x 8 per leg, holding a support for balance; (4) Lat pulldown: 3 x 10 at 40-50 kg; (5) Loaded glute bridge: 3 x 12; (6) Pallof press: 3 x 10 per side; (7) Plank: 3 x 30 s. Finish with your unrecorded 8-minute hip and spine mobility circuit (couch stretch, standing forward fold, 90/90 rotations, deep squat hold, supine figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session is one of only two strength exposures in the week, and it is the one that rebuilds the hip hinge you lost when you dropped deadlifts for your back. The elevated rack pulls train the exact posterior-chain and erector pattern that currently aches on long climbs and after crouching carpentry work, while the split squats and glute bridges give the sit-bone and lower-back support that stops the blisters and back pain on 200-1200 km rides. Skipping it costs you the progressive overload that carries your posture and back durability into the spring brevet series and PBP, and it removes the lean-muscle stimulus that supports your 24.6% to 15% body-fat goal."
  }
}

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean, contains only the requested today object, and matches the 2026-10-30 planned Friday gym session at 45 minutes, moderate, indoor, 30 TSS and 220 W. The session is well built: rack pulls at knee height with a rest and heart-rate gate, split squats capped at two sets as the week plan requires, a press and core block, and a mobility finish that ties back to the athlete's hip and back goals. The weakness is that the description is long and partly redundant, and the bench press and loads are approximate, so the execution detail is strong but somewhat padded. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): empty response content. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Re-entry Gym Strength B — the second session of your 2-day strength split, built around grooving a safe, flat-back hip hinge. Warm up 6 minutes on the rower or an exercise bike at easy effort (heart rate drifting up to ~100–110 bpm), plus leg swings, hip circles and 8 slow bodyweight squats. Main work: (1) Trap-bar or barbell rack pulls from knee height — 3 × 10 with a light load (empty bar or ~20–30 kg total; this is technique practice, not effort): brace, push your hips back with a flat back to the bar, and stand tall; rest 90–120 seconds between sets and only start the next set once your heart rate is below 110 bpm. (2) Bodyweight split squats — 2 × 8 per leg at a controlled 2-1-2 tempo, tall torso, no added load
```

```
while your quads finish adapting from Tuesday. (3) Dumbbell bench press or push-ups — 3 × 10 at a moderate
load leaving 3–4 reps in reserve. (4) Core, 2 rounds: side plank 25 s per side + bird-dog 8 per side, moving
smoothly between them. Keep the whole session easy-moderate: roughly 100–110 bpm average with lift peaks no
higher than Tuesday's ~140 bpm, and no rushing between stations. Finish with your unrecorded 8-minute
hip/spine mobility circuit (90 s each: couch stretch or low lunge, standing forward fold with soft knees,
90/90 hip rotations, deep squat hold with heels down, supine figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the flat-back hip-hinge motor pattern under minimal spinal
load — the specific adaptation that gates every later posterior-chain progression toward loaded squats and
deadlifts without re-irritating your back — plus single-leg strength and knee stability that support both a
durable pedal stroke and your 5K build. It is the second of the week's two gym sessions inside the 5.0–5.5-
hour Week 1 target and directly serves the block's focus of restoring core and hip strength for a pain-free,
lower-back-friendly cycling position ahead of Paris-Brest-Paris. Skip it and you lose a full week of hinge
progression — the one movement gate standing between you and loaded posterior-chain work this winter — and
you halve the weekly strength stimulus behind your core/flexibility goal. If something truly intervenes,
keep at least the rack pulls and split squats (~25 minutes) so the hinge groove stays alive."
  }
}

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean and matches the requested today object, with the 2026-10-30 date, planned status, moderate 45-minute indoor gym workout, estimatedTss 30, FTP 220 W and null bikeWorkout all consistent with the plan. The exercise prescription is well sequenced for a back-sensitive athlete, with explicit sets, reps, rest, cues and a stop rule for lower-back pain, though the three-set rack pull plus three-set rows and Pallof work may push the stated 45 minutes. The rationale ties the session to back pain, saddle discomfort and the 5K and randonneur goals, but it leans on general claims about lean mass and metabolic benefit that the input does not directly support. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Contract 1.5/1.5 · Fidelity 2.0/2 · Design 2.5/3 · Rationale 1.8/2 · Grounding 1.7/2 · Detail 1.8/2

Judgment: The JSON is clean and matches the requested today object, with the 2026-10-30 date, planned status, moderate 45-minute indoor gym workout, estimatedTss 30, FTP 220 W and null bikeWorkout all consistent with the plan. The exercise prescription is well sequenced for a back-sensitive athlete, with explicit sets, reps, rest, cues and a stop rule for lower-back pain, though the three-set rack pull plus three-set rows and Pallof work may push the stated 45 minutes. The rationale ties the session to back pain, saddle discomfort and the 5K and randonneur goals, but it leans on general claims about lean mass and metabolic benefit that the input does not directly support.

  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Safe Hip Hinge & Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "45-minute moderate-intensity gym strength session focused on safe hip hinge progression,
core stability, and balanced lower-body/upper-body strength to support your fat loss, back health, and
cycling posture goals. Follow this structure exactly:\n1. Warm-up (5 min): Easy treadmill walk or SkiErg at
<120 bpm + dynamic mobility (cat-cow x 10, bodyweight squats x 10, front/side leg swings x 10 per leg) to
```

```
loosen hips and spine.\n2. Elevated knee-height rack pulls (or trap-bar pulls, if available): 3 sets of 8
reps, starting with an empty bar or 20 kg total load. Cues: keep a flat neutral back, hinge at the hips,
keep the bar close to your legs, and avoid rounding your lower back. Rest 90–120 seconds between sets, and
wait until your heart rate drops below 110 bpm before starting the next set to protect your back.\n3.
Bodyweight split squats: 2 sets of 10 reps per leg. Cues: keep your front knee aligned over your ankle,
torso upright, and avoid leaning forward to reduce quad strain as you recover from Tuesday's goblet squats.
Rest 90 seconds between sets.\n4. Weighted glute bridges: 3 sets of 12 reps (use a 12 kg dumbbell on your
hips if the bodyweight version feels easy). Cues: squeeze your glutes fully at the top of each rep, and
avoid arching your lower back. Rest 60 seconds between sets.\n5. Single-arm dumbbell rows: 3 sets of 10 reps
per arm (start with 10–15 kg dumbbells, adjust as needed). Cues: keep your back flat, pull your elbow toward
your hip, and squeeze your shoulder blade at the top. Rest 60 seconds between sets.\n6. Pallof press (cable
or resistance band): 3 sets of 10 reps per side. Cues: brace your core tightly, resist rotation, and keep
your torso still. Rest 60 seconds between sets.\n7. Plank: 3 sets of 30 seconds. Cues: maintain a neutral
spine, engage your core and glutes, and avoid sagging or hiking your hips. Rest 45 seconds between sets.\n8.
Cool-down (3 min): Quick hip mobility flow (90/90 hold x 30 sec per side, supine figure-4 stretch x 30 sec
per side, couch stretch x 30 sec per side) to tie into your daily mobility routine.\nFocus on controlled
form throughout, and stop any exercise that causes sharp lower-back pain immediately.",
    "optional": false,
    "optionalRationale": "This session builds foundational posterior-chain and core stability strength that
directly reduces lower back pain on long cycling climbs and sit-bone discomfort from your upright riding
posture, while preserving lean muscle mass to support steady, sustainable fat loss. It is a core component
of this week's multimodal re-entry, safely progressing your hip hinge pattern with elevated rack pulls to
avoid the back injury you’re prone to. Skipping this session would delay the strength adaptations needed to
eliminate cycling-related back and saddle pain, slow core stability gains that support both your 5K running
and long-distance randonneur goals, and reduce the metabolic benefit of strength training for fat loss this
week."
  }

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00301	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate returns only the requested today object with valid enum values, the correct date, a planned status, a 45-minute moderate outdoor-false gym session and the plan's 30 TSS and 220 W FTP, so fidelity is strong. The prescription is specific and safe: elevated rack or trap-bar pulls with a flat-back cue, two bodyweight split-squat sets, Pallof presses, planks, glute bridges, rest periods tied to the sub-110 bpm rule and a stated 40 kg starting-load assumption. The rationale is grounded in Tuesday's goblet-squat tolerance and the lower-back goal, though the optionalRationale leans somewhat toward generic consequence language. Detail includes stop conditions and an explicit load assumption, but it does not give a fallback if the gym equipment is unavailable. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B, 45 min. Warm-up 8 min: cat-cow, 90/90 hip rotations, glute bridges, easy bodyweight squats. Elevated knee-height rack or trap-bar pulls 3x8 at a light load (assume ~40 kg to start; choose a weight that keeps a perfectly flat back and stop the set if the low back rounds), resting 90-120 s
```

```
so heart rate drops below 110 bpm before each set. Bodyweight split squats 2x8-10 per side, held to two
controlled sets to keep quads fresh after Tuesday's goblet squats. Pallof press 3x10 per side, plank 3x30 s,
and glute bridge 3x12 for anti-rotation core and posterior-chain stability. Finish with the daily 8-min
hip/spine mobility circuit (couch stretch/low lunge, standing forward fold with soft knees, 90/90 rotations,
deep-squat hold, supine figure-4, cat-cow). No floor deadlifts or heavy squats today.",
    "rationale": "Friday's Strength B is the second gym session of Week 1 in the Autumn Re-Entry block and
the safe hinge progression your lower back needs: after Tuesday's clean Gym Strength A (all three 12 kg
goblet-squat sets with only manageable quad burn, 102 bpm average, recoveries into the 70s-80s) and
Wednesday's easy run/walk and row, you are fresh enough to rebuild the hip hinge from a knee-height
rack/trap-bar elevation instead of floor deadlifts your back cannot yet tolerate, while two controlled
bodyweight split-squat sets keep your quads adapting without overload. Pallof presses and planks build the
anti-rotation core stability that directly fights your lower-back pain on long climbs and the upright, sit-
bone-heavy riding position, and the 90-120 s rests keep heart rate below 110 bpm so the session stays
moderate and does not trigger the evening hunger spikes that undermine your fat-loss goal. It fits the
week's 5.0-5.5 h target load and the block's daily-mobility-plus-conservative-strength foundation.",
    "optional": false,
    "optionalRationale": "Skipping it would halve this week's strength stimulus and stall the elevated hip-
hinge progression that protects your lower back on long climbs and in a more aerodynamic posture, and you
would lose the Pallof/plank anti-rotation durability that keeps your spine stable during crouching carpentry
work and multi-hour rides — weakening the block's core-and-mobility foundation and the week's 5.0-5.5 h
target load toward your fat-loss, back-pain-free, and long-ride goals."
  }

Hard gates: the response never mentions Atlas

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.5/2 · Design 0.5/3 · Rationale 0.9/2 · Grounding 1.0/2 · Detail 0.4/2

Combined judgment: Today plan: The candidate correctly keeps the date, planned status, moderate 45-minute gym workout, non-outdoor flag and 30 TSS from the plan, and the JSON shape is valid. However, the description gives no exercise list, sets, reps, rest periods, or load guidance, even though the athlete asked for very specific strength workouts and the plan specifies goblet squats, rack pulls and split squats at fixed set counts. The optionalRationale mentions Paris-Brest-Paris and posterior chain but misses the fat-loss and hip-flexibility goals and does not state a concrete loss tied to the block focus. The estimatedTss and FTP are consistent with the plan but the rationale is thin. Season revision: The answer fails the hard requirements: Atlas is never mentioned in the season, blocks, week, or today, and the season goal still reads as the April 200 km brevet. Block 1 is essentially the supplied block with minor wording changes, so it is not genuinely changed, though its start date of 2026-10-21 is kept. The season blocks are unchanged, so the Atlas, Paris-Brest-Paris and survey adjustments are ignored. The week and today sessions are coherent, the tomorrow and next items stay null, and FTP and TSS are consistent, but the bodyMetrics entry adds a null-only record rather than an empty array. Hard gates failed: the response never mentions Atlas.

FAIL	$0.00292	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, has only the requested today object, and matches the date, planned status, moderate 45-minute gym workout, non-outdoor flag, and null bikeWorkout from the plan. The exercise list follows the week's intent: elevated hinge, two split-squat sets, lat pulldowns, Pallof press, and a regressed plank, with sensible rest and RPE guidance and a stop rule for back discomfort. Weaknesses are that the rack pull load is left as light without a concrete starting number, and the rationale, while specific, does not reference the athlete's recent heart-rate and quad-burn feedback in detail. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps Friday 2026-10-30 as a planned 45-minute moderate indoor gym session with the planned 30 TSS, FTP 220 W, and canBeOutdoor and outdoor flags set correctly for a gym session. The exercise list is specific, with sets, reps, RPE, rest, a heart-rate restart cue, and a stop-on-back-pain rule, and it respects the 2-set split squat cap and the elevated hinge change. Weaknesses are that no loads are given for the pulls, pulldowns, or Pallofs even though the athlete's recent loads (12 kg goblet, 50 kg lat pulldown) were available, and the description does not state a load assumption, which limits execution detail. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "bikeWorkout": null,
    "description": "Second gym session of the week, focused on safely rebuilding your hip hinge and single-leg strength. Warm-up (6 min): 3 min easy SkiErg or brisk incline walk, 10 bodyweight squats, 10 slow broomstick hip hinges, 8 cat-cow reps, 10 glute bridges. Main work — take a full 90-120 s rest between sets so your heart rate drops below 110 bpm before each hinge and split-squat set: (1) Elevated knee-height rack
```

```
or trap-bar pulls, 3 x 8 reps at a conservative load (start around 40 kg and only add weight if your back stays perfectly flat), pushing the hips back and squeezing the glutes at the top; stop the set immediately if you feel any lower-back tightness. (2) Bodyweight split squats, 2 x 8-10 per leg, hands on a rack for balance if needed, keeping these to just two sets so your quads stay fresh after Tuesday's lifting. (3) Seated cable row, 3 x 10 at a moderate weight (around 40 kg), tall chest and controlled return. (4) Pallof press, 3 x 10 per side, slow and steady. (5) Plank, 2 x 30-45 s. Cool down with your daily 8-minute hip and spine mobility circuit. Keep your average heart rate in the 100-115 bpm range throughout.",
    "optional": false,
    "optionalRationale": "This is one of only two strength sessions this week and the key step in the block's safe hinge progression: the elevated knee-height pulls rebuild the flat-back hip-hinge pattern that protects your easily-injured lower back, while the split squats lay down the single-leg strength that will support your 5K running progression and stable, ache-free pedaling on long climbs. Skip it and you delay the posterior-chain base you need before heavier winter lifting and longer rides — the very strength that will let you hold a lower, more sustainable position on the bike and eliminate the sit-bone blisters and back ache that have limited your long rides toward the 200 km brevet and PBP."
  }
}
```

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned gym session with the matching date, duration, moderate intensity, indoor flag and TSS, and its exercise selection follows the weekly constraints: elevated pulls replace floor deadlifts, split squats are capped at two sets, and rest and heart-rate guidance reflect the coach replies. Execution detail is strong, with tempos, cues, a stated load assumption for the pulls and a cool-down. The rationale is specific but overstates the case by calling this the only hinge-pattern session, when Tuesday's glute bridges also train the hinge, and the description is dense and lacks explicit RPE or stop conditions. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response.     "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Your second gym session of Week 1 (45 min) introduces the safe hip-hinge progression
that replaces floor deadlifts. Warm-up (6–8 min): 3–4 min easy spin on a gym bike or brisk walk, then leg
swings, hip circles, and cat-cow. Main work, taking the full 90–120 s rest between sets so your heart rate
drops below 110 bpm before each set: (1) Elevated knee-height rack pulls or trap-bar pulls — 3 x 8 reps,
starting light (around 40–60 kg), flat back, hips pushing back, squeezing glutes at the top; this rebuilds
posterior-chain strength without the injury risk of floor deadlifts or good mornings, and only add weight
```

```
once the hinge feels crisp. (2) Bodyweight split squats — 2 x 8 per leg at a controlled 2-seconds-down
tempo, holding a rack for balance if needed; two sets only, to keep your quads fresh after Tuesday's goblet
squats. (3) Seated cable row — 3 x 10–12 at a moderate weight, tall chest, pulling to the lower ribs. (4)
Pallof press — 3 x 10 per side, resisting rotation. (5) Plank — 2 x 30–45 s. Cool-down (5 min): gentle
stretching, then your daily 8-minute hip/spine mobility circuit at home. Keep every set controlled and
moderate — the goal is hinge mechanics and back-safe strength, not fatigue. A protein-rich afternoon snack
before the session helps you keep dinner moderate afterward.",
    "optional": false,
    "optionalRationale": "This is the week's only hinge-pattern strength session and the cornerstone of your
core-strength goal: the elevated pulls rebuild the posterior chain and hip-hinge pattern that will end the
lower-back ache on long climbs and in crouching carpentry work, and eventually let you hold a lower, more
aerodynamic cycling position without sit-bone blisters on long brevets. Skipping it cuts the week's strength
stimulus in half, stalls the safe progression toward heavier pulls in Weeks 2–4, and leaves your back less
protected for Saturday's 2-hour hike — a real cost toward the 200 km brevet in April and Paris-Brest-Paris
in 2027, not a session you can quietly drop."
  }

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response is clean JSON with only the today object, correct date, planned status since no activity exists for today, a moderate 45-minute gym workout, outdoor false, canBeOutdoor false and bikeWorkout null, all consistent with the plan. The exercise list follows the Gym Strength B direction (elevated hinge pulls, two split-squat sets, core and glute work) with explicit sets, reps, rest and a heart-rate gate, which suits this athlete's wish for specific gym prescriptions. Weaknesses are the lack of load guidance for the rack pulls and the unclear structure, where three rounds are stated but the sets are listed per exercise, plus no explicit stop condition for back symptoms and a shortened cool-down compared with the daily eight-minute mobility routine. The rationale is specific to the back, sit-bone and race goals but does not reference the week's target load. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "description": "Gym strength session focused on rebuilding a safe hip hinge and single-leg stability while protecting your lower back. Warm up 5 minutes (easy bike or brisk walk plus hip circles and cat-cow). Main circuit: (1) elevated knee-height rack pulls or trap-bar block pulls, light load, 3x10 with a flat back and no spinal rounding; (2) goblet squats 12 kg, 3x10, holding the weight steady until third-set quad burn fully fades; (3) bodyweight split squats, 2x8 per side, controlled depth; (4) glute bridges 3x12; (5) Pallof press 3x10 per side; (6) plank 3x30 s. Take a full 90–120 seconds of rest between every set so your heart
```

```
rate drops below 110 bpm before lifting again. Finish with your 8-minute hip and spine mobility circuit
(couch stretch or low lunge, standing forward fold, 90/90 hip rotations, deep squat hold, figure-4 glute
stretch, cat-cow). Keep the hinge load light today — the adaptation you want is the pattern, not the
weight.",
    "optional": false,
    "optionalRationale": "This is the hinge and single-leg session that rebuilds the posterior chain and hip
stability behind your upright cycling position — the same position that currently loads your sit bones and
aches your back on long climbs. Skipping it costs you the safe lifting pattern that lets you progress to
loaded pulls and eventually a lower, more sustainable bike fit before spring brevet season, and it would
leave your week with only one strength stimulus instead of the two this re-entry block depends on."
  }
}
```

5.4/12.5

OpenAI: GPT-4o-mini (2024-07-18)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	26.8 s	$0.00401	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00584	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.4/2 · Design 0.5/3 · Rationale 0.2/2 · Grounding 0.8/2 · Detail 0.5/2

Combined judgment: Today plan: The JSON is valid, has only the today object, and matches the planned Friday Gym Strength B: date, 45 minutes, moderate intensity, indoor, TSS 30, and FTP 220 W are all correct. The description is too thin for an athlete who asked for exact exercises, sets, and reps: it names only the elevated pulls and split squats without sets, reps, loads, or a rest interval number. The optionalRationale is empty even though the session is required and must state the concrete adaptation it builds and what is lost by skipping, so the rationale is missing entirely. Season revision: The JSON has the eight required top-level keys and seven current-week sessions, and block 1 keeps the 2026-10-21 start. However, the season is not re-planned: its blocks array contains only block 1, so the Atlas build, the April brevet series, the Paris-Brest-Paris block and the taper through 2027-04-04 are missing and the season does not tile. Atlas appears only in the season goal text; the block, week and today rationales never prepare for it, and block 1 is essentially unchanged from the supplied version apart from rationale wording. The candidate also fills tomorrow with a copy of today's run even though the input supplied it as null, and marks today's planned run as completed although no matching activity was recorded for that day. Hard gates failed: block 1 is unchanged.

{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and
low-load strength before introducing limited threshold work. The winter block preserves cycling while using
skiing and easy running for cross-training durability. The build phase then progresses sustained power and
long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load.
The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean and matches the requested today object, and the session fits the planned Friday gym day as a 45-minute moderate indoor workout with the correct 30 TSS and 220 W FTP. The exercise choices respect the back constraints from the feedback, including knee-height pulls instead of floor deadlifts, two split-squat sets, and 90 to 120 seconds of rest to keep heart rate under 110 bpm. The rationale is reasonably specific to the hinge and cycling posture goals but leans somewhat on general benefits, and the description gives no explicit RPE or load guidance beyond an assumed 40 to 50 kg starting weight. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "description": "Gym Strength B focuses on rebuilding your hip hinge safely and strengthening your posterior chain to protect your lower back and improve your cycling posture. Take 90–120 seconds rest between every working set so your heart rate drops below 110 bpm before the next set.\n\nWarm-up (5 min): Light rowing or bike ergometer for 3 min, then 2 min of dynamic hip swings and cat-cow spinal mobility.\n\n1. Elevated Rack Pulls or Trap-Bar Pulls (bar at knee height): 3 × 8–10 reps. Start light (40–50 kg trap-bar or empty barbell on rack pins at knee height). Focus on a flat back, pushing hips back to the
```

```
wall, and squeezing glutes at the top. If any lower-back rounding occurs, reduce the weight.\n\n2.
Bodyweight Split Squats: 2 × 8–10 reps per leg. Hold a stable support if needed for balance. Keep your torso
upright and front knee tracking over your toes. Descend controlled, pause briefly at the bottom, drive up
through the front heel.\n\n3. Loaded Glute Bridges: 3 × 10–12 reps. Use a barbell or dumbbell across your
hips. Squeeze glutes hard at the top for a full second; do not hyperextend your lower back.\n\n4. Pallof
Press: 3 × 10 reps per side. Use a cable or resistance band. Press out slowly, hold 2 seconds, return with
control. This builds the anti-rotation core stability your back needs on long rides and during manual
labor.\n\n5. Side Plank: 2 × 20–30 seconds per side. Keep hips stacked and lifted; this targets the lateral
core that stabilizes your pelvis in the saddle.\n\nCool-down (5 min): 90 seconds each of standing forward
fold (soft knees), couch stretch/low lunge with hips pushed forward, and supine figure-4 glute
stretch.\n\nAfter the session, complete your daily 8-minute hip and spine mobility circuit if not already
covered in the cool-down.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge pattern and posterior-chain strength that
will eventually let you handle heavier deadlifts and squats without back injury, and that directly supports
a more aerodynamic, pain-free cycling position on long rides and climbs. Skipping it delays the hinge
progression your back depends on and leaves your glutes and hamstrings undertrained for the weekend hike and
the months of cycling volume ahead."
  }

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate returns only the required today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, TSS 30, FTP 220 and a null bikeWorkout, all consistent with the plan. The session follows the Week 1 Gym Strength B intent, with elevated pulls, two bodyweight split-squat sets, anti-rotation core work and the mobility circuit, and it gives explicit sets, reps and rest. Weaknesses are the vague load guidance ('light load' with no kg starting point or progression rule) and the rationale, which is sound but leans on general back-protection language rather than the specific week-level targets. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean and the today object matches the planned 2026-10-30 gym session in type, intensity, duration, indoor flag and TSS, with a sensible hinge, split-squat, pull and core structure that respects the back-safety constraints and the heart-rate ceiling. The description is weakened by duplication: split squats appear once as eight per side in a warm-up and again as two sets of eight per side in the working block, which makes the sequence ambiguous. The rationale is specific to the fat-loss, back-protection and PBP goals and explains what is lost by skipping, though it leans on the plan's load figures rather than the athlete's recent gym feedback, and the rep and RPE guidance is otherwise detailed and execution-ready. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP and a 30 TSS that match the plan's Friday gym session. The exercise selection follows the block's hinge progression, with knee-height pulls, two split-squat sets, 12 kg goblet squats and the 110 bpm rest cap from the coach analysis. The main weakness is that the listed volume with 90 to 120 second rests across six exercises and 3 sets each likely exceeds the 45-minute target, and the description gives no load progression for the pulls or a stop rule if quad burn returns. The rationale is specific to the lower-back and saddle problems but does not say what is lost by skipping beyond general consolidation. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

5.3/12.5

OpenAI: GPT-5.4 Nano

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	15.6 s	$0.00822	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00552	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.5/2 · Design 0.6/3 · Rationale 0.2/2 · Grounding 0.7/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid and keeps the requested today shape, with the correct date, workout type, moderate intensity, 45 minutes, indoor flag and FTP. However, it marks today as completed even though no activity dated 2026-10-30 is recorded, which contradicts the planned session and invents a completed workout. The optionalRationale is empty despite optional being false, so the required purpose and cost-of-skipping explanation is missing. The description gives some useful cues (90-120 s rest, flat back, stop rule, mobility finish) but omits the specific exercises, sets and reps the athlete explicitly asked for in strength training. Season revision: The response is valid JSON with the required keys, seven week sessions, and today matching the 2026-11-01 session, and it keeps block 1 starting on 2026-10-21 with the earlier-week data grounded in the supplied activities. However, it fails the core revision: the season contains only the original block 1 and does not re-plan the remainder through 2027-04-04, so the Atlas Mountain Race, Paris-Brest-Paris, and the brevet series are not tiled into the season. The block name, focus, and rationale are essentially unchanged, and neither the block nor the week names or prepares for Atlas, so the survey adjustment about the new goal is effectively ignored apart from a sentence in the season goal.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response is clean valid JSON with the requested today object, the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, TSS 30, FTP 220 and a null bikeWorkout, matching the current plan. Its exercise selection is specific with sets, reps, rest and a heart-rate-before-set cue drawn from the athlete's feedback. It conflicts with the coach's stated cap of two bodyweight split-squat sets by prescribing 2x8-10 per leg (4 sets total), and it adds bench press and rows the plan did not name. The rationale ties the session to posterior-chain strength and saddle pressure but says little about the fat-loss goal or what is lost in calorie-burn terms, and the description lacks explicit stop conditions or fallbacks for back pain. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

124.1 s	$0.0286	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.6/2 · Design 2.4/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.6/2

Judgment: The response is clean valid JSON with the requested today object, the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, TSS 30, FTP 220 and a null bikeWorkout, matching the current plan. Its exercise selection is specific with sets, reps, rest and a heart-rate-before-set cue drawn from the athlete's feedback. It conflicts with the coach's stated cap of two bodyweight split-squat sets by prescribing 2x8-10 per leg (4 sets total), and it adds bench press and rows the plan did not name. The rationale ties the session to posterior-chain strength and saddle pressure but says little about the fat-loss goal or what is lost in calorie-burn terms, and the description lacks explicit stop conditions or fallbacks for back pain.

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B: 45-minute full-body session completing the week’s two-day split. Warm-up
5 minutes light cardio (rower or stationary bike) and dynamic hip movements. Work sets: Elevated rack pulls
or trap-bar pulls (knee height) 3×8–10 reps at light-to-moderate load, emphasizing a flat-back hip hinge to
```

```
protect your lower back; rest 90–120 seconds between sets and ensure heart rate drops below 110 bpm before
each set. Bodyweight split squats 2×8–10 reps per leg (4 sets total), controlled descent, 90–120 seconds
rest. Dumbbell bench press 3×10–12 reps, 60–90 seconds rest. Single-arm dumbbell row 3×10–12 reps per arm,
60 seconds rest. Dead bug anti-extension core work 3×10 reps per side. Finish with your unrecorded 8-minute
hip/spine mobility circuit. This session builds the posterior-chain strength and single-leg stability that
will eliminate your back pain on long climbs and reduce saddle pressure by enabling a more aerodynamic,
hinged posture on the bike.",
    "optional": false,
    "optionalRationale": "Skipping this session sacrifices the week's only dedicated hip-hinge and single-
leg strength stimulus, leaving your lower back vulnerable to re-injury and delaying the flexibility gains
needed to shift weight off your sit bones during long rides. You lose critical posterior-chain adaptation
that supports fat loss while preserving muscle, and you break the consistency required to safely progress
toward heavy lifting in the winter block."
  }

FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate enum values, and matches the planned 45-minute indoor gym session at 220 W with a TSS of 30. The exercise list is specific with sets and reps and follows the Strength B intent, including elevated hinge pulls, two split-squat sets, and full rest to get heart rate down. The rationale ties the session to posterior-chain safety and saddle discomfort but stays fairly generic on what is lost toward the fat-loss goal, and the description gives no load progression for the pulls or RPE guidance, fallback for equipment, or stop condition for back pain. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): Provider returned error. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "description": "Today's Gym Strength B completes the second half of your Week 1 strength split, targeting the posterior chain and single-leg stability that your lower back and cycling posture urgently need. After a 5-minute warm-up (light row or bike plus leg swings and cat-cow), perform elevated knee-height rack pulls or trap-bar deadlifts for 3 sets of 8–10 reps with a light-to-moderate load, focusing on a flat-back hip hinge and taking a full 90–120 seconds of rest between sets so your heart rate drops below 110 bpm. Then complete 2 controlled sets of bodyweight split squats (8–10 reps per leg) to build quad and glute
```

```
stability without overloading your legs. Finish with single-leg glute bridges (2×10/leg), Pallof presses
(3×10/side), and dead bugs (3×8/side) for anti-rotation core stability, followed by a 5-minute cool-down
stretch (hip flexor, hamstring, spinal twist). Keep your heart rate below 135 bpm throughout and take full
rest between sets—this is about rebuilding movement quality, not grinding. Complete your daily 8-minute hip
and spine mobility circuit afterward.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain hip hinge durability and single-leg
stability that directly address your lower-back injury risk and cycling posture issues. If you skip it, you
lose the second weekly strength stimulus needed to rebuild glute and hamstring resilience that keeps your
back pain-free on long rides, and you maintain the strength imbalance that contributes to your upright
cycling position and sit-bone discomfort."
  }

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 0.2/2 · Grounding 0.7/2 · Detail 0.3/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned Friday gym session on 2026-10-30 with the correct moderate intensity, 45 minutes, 30 TSS, 220 W FTP and indoor flags. The description is a single sentence that only restates the plan's focus, with no exercises, sets, reps, loads, rest periods, RPE guidance or stop conditions, even though the athlete explicitly asked for very specific strength workouts. The optionalRationale is empty despite the prompt requiring a rationale for today's session, so the session's purpose against the fat-loss, hip-hinge and back-protection goals is never stated. Season revision: The response mentions Atlas only in the season goal text, while the season blocks, block name, focus and rationale never plan for Atlas or the Paris-Brest-Paris build, so the season was not really re-planned around the new goal and the required changed block 1 with Atlas preparation is missing. Block 1 keeps the old dates, name and structure and its rationale is meta-commentary about what changed, and the current week and today session were reused with the same run and status changed to completed although today was planned. The season also ends on 2027-04-04 with the old taper, dropping the August Paris-Brest-Paris and the Atlas date from the block structure. Strengths include valid JSON with the eight keys, the block starting on 2026-10-21, correct handling of nulls for tomorrow beyond the supplied null and empty bodyMetrics, and reasonable power-free outline sessions consistent with the 225 W FTP. Hard gates failed: block 1 is unchanged.

{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and
low-load strength before introducing limited threshold work. The winter block preserves cycling while using
skiing and easy running for cross-training durability. The build phase then progresses sustained power and
long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load.
The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or

5.0/12.5

Qwen: Qwen3.8 Omni Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	E	A+	709.5 s	$0.00598	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00259	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today's date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and null bikeWorkout, and carries FTP 220 W forward. The exercise set (knee-height pull, split squats, lat pulldown, Pallof press) follows the plan and the athlete's back-safety constraints, with RPE, rest and stop conditions given. Weaknesses: the description is very long and packed with mobility detail that duplicates the daily circuit, the lat pulldown and Pallof loads are not specified, the pulldown is listed as three sets while the plan calls for a session that also includes goblet squats omitted here, and the rationale is somewhat generic about fat loss rather than naming the concrete block target. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "bikeWorkout": null,
    "description": "Indoor gym session, 45 minutes total including your daily 8-minute hip and spine
mobility circuit. Warm up for 5 minutes with easy exercise-bike pedaling or brisk treadmill walking at 115-
125 bpm, then do 10 slow cat-cow movements, 10 gentle 90/90 hip rocks per side, and 10 bodyweight glute
```

```
bridges. Main work: 1) Knee-height rack pull or trap-bar pull, 3 sets of 8 reps at RPE 6, starting at 30-40
kg total if using a barbell; take 120 seconds rest and begin the next set only when your heart rate is below
110 bpm. Keep a neutral spine, brace your ribs down, and stop the set if your lower back rounds. If the trap
bar or adjustable rack is not available, use dumbbells or kettlebells pulled to knee height with the same
hinge pattern. 2) Bodyweight split squat, 2 sets of 8 reps per leg, 90 seconds rest; hold a support if
needed, keep the torso tall, and stop if the quad burn becomes sharp rather than manageable. 3) Lat
pulldown, 3 sets of 10 reps at RPE 6, 90 seconds rest; use a weight you can control without shrugging or
rounding, supporting an upright cycling posture. 4) Pallof press, 3 sets of 10 reps per side, 45-60 seconds
rest; keep your hips and shoulders square and resist rotation. Finish with the 8-minute mobility circuit:
couch stretch or low lunge with hips pushed forward, standing forward fold with soft knees gradually
straightening, 90/90 hip rotations, deep squat hold with heels down, supine figure-4 glute stretch, and slow
cat-cow spinal movement.",
    "optional": false,
    "optionalRationale": "This session builds the hip-hinge strength, unilateral leg control, and anti-
rotation core stability that keep your pelvis steadier on the bike, reducing sit-bone pressure and lower-
back ache on long climbs. It also adds moderate full-body work that supports fat loss without the high
heart-rate spikes that tend to drive your evening hunger. Skipping it delays the posterior-chain and core
base you need before adding more running volume and longer winter endurance sessions, and leaves your back
less prepared for the 200 km brevet build."
  }

FAIL	$0.00253	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate gym workout of 45 minutes dated 2026-10-30 with indoor flags and an estimated FTP of 220 W, and it follows the Gym Strength B direction from the plan with elevated pulls and two split-squat sets. The exercise prescription is reasonably specific with sets, reps, rest and a heart-rate recovery cue, but it omits explicit load guidance for the pulls and does not state a stop condition for back pain. The rationale is grounded in the posterior-chain and back goals but is somewhat generic and does not mention the rain-day context or the plan's weekly target load, and the detail is adequate without fallbacks for the lower-back or quad issues the athlete reported. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate returns valid JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, null bikeWorkout and the planned estimated TSS and FTP, so fidelity is strong. The session follows the week outline (elevated pulls, two split-squat sets, core work, rest guidance and mobility), but it does not specify sets, reps or loads for the gym exercises even though the athlete asked for exact exercises, sets and reps, and it omits the goblet squat work named in the week plan. The rationale is specific to back pain, sit-bone pressure and fat loss, though the claim that skipping lowers weekly consistency is somewhat generic. Detail is moderate: rest and heart-rate cues are useful, but there is no load progression or stop condition. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

FAIL	$0.00298	anthropic/claude-haiku-5.5

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and matches the planned Friday gym session on 2026-10-30 with status planned, moderate intensity, 45 minutes, indoor, and the 30 TSS estimate. The exercise selection follows the block's safe hinge progression with knee-height rack pulls, two split-squat sets, and core work, and it includes warm-up and cool-down structure with a back-fatigue stop rule. However, optionalRationale is left empty even though optional is false, so the session never states the concrete adaptation it builds or what the athlete loses by skipping it. The pull load is given only as a vague percentage of perceived 1RM with no kg guidance or progression, and the glute bridge and plank volumes were quietly reduced from the prior week without explanation. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): missing top-level keys: today; missing today object. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

```

```
reinforces movement quality with a conservative loading plan that aligns with Week 1 Gym Strength B. Main
goal today is to support fat loss by maintaining strength and mobility without provoking back pain, so we
keep loads controlled and rest periods sufficient for technical focus rather than maximal effort. \n\nWarm-
up (5 minutes): dynamic hip hinge prep, glute activation (glute bridges to light bridge hold), leg swings
(forward/backward and lateral), and light band pulls for upper back. \n\nMain sets: \n- Elevated knee-height
rack pulls: 3 sets x 6 reps at a light-moderate load (target roughly 60–70% of your perceived 1RM), tempo
about 2 seconds up, 1-second pause, 2 seconds down. Rest 90–120 seconds between sets. \n- Split squats
(bodyweight): 2 sets x 8 reps per leg; controlled tempo with emphasis on knee alignment; rest 90 seconds
between sets. \n\nAccessory work: \n- Glute bridges: 2 x 12 reps; drive hips through with a slow, controlled
tempo. \n- Pallof press: 3 x 10 per side; anti-rotation to protect the spine. \n- Plank: 2 x 30 seconds;
brace core and keep hips level. \n\nCool-down (2–3 minutes): hamstring and hip-flexor stretches, gentle
thoracic and hip mobility work. \n\nNotes: Maintain a flat back on hinge movements; if you feel back
fatigue, reduce rack-pull load or substitute with a lighter hip-hinge pattern. Hydration and a protein-rich
snack after training will support recovery and appetite regulation. This session reinforces posture and
stability to support long rides and daily activities, contributing to your fat-loss and back-health goals
without overloading the spine.",

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): unexpected top-level keys: bodyMetrics. Season revision: The response is valid JSON with the required keys, seven week sessions, block 1 starting on 2026-10-21, contiguous season blocks, and null tomorrow, nextWeek and nextBlock. It names Atlas in the season goal, the Pre-Atlas block name and the block rationale. However, block 1 is essentially unchanged apart from its rationale, so the current block is not meaningfully redesigned for Atlas. The season drops the April 200 km brevet series from any block, leaves no taper before the 28 February Atlas race (block 3 runs to the race day), and the week's rationale still reads partly as commentary on the previous plan.

FAIL	$0.00282	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and matches the planned Friday 2026-10-30 gym session with status planned, moderate intensity, 45 minutes, indoor flags and TSS 30. The description, however, is only a list of exercise names with no sets, reps, loads, rest periods or heart-rate guidance, even though the athlete asked for very specific strength prescriptions and the coach feedback calls for 90 to 120 seconds of rest and a heart rate below 110 before sets. The rationale ties the session to hip hinge mechanics, core stability and the back problem, but it does not state what is lost by skipping it toward the fat-loss and back-resilience goals. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned indoor gym workout on 2026-10-30 with the right moderate intensity, 45 minutes, and 30 TSS, and it avoids inventing a completed activity. However, the description is generic and gives no exercise list, sets, reps, rest periods, or load guidance, even though the athlete explicitly asked for very specific strength workouts and the plan specifies goblet squats, trap-bar pulls and two split-squat sets. The rationale is reasonably tied to back and hip goals but does not reference the Week 1 target load or what is lost in the cadence of the block, and the description does not mention the 90 to 120 second rest rule or heart rate ceiling the coach has been repeatedly setting. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): missing top-level keys: today; missing today object. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

FAIL	$0.00281	anthropic/claude-haiku-5.5

Mentions Atlas FAIL	Block 1 changed FAIL	Block 1 starts 2026-10-21 FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean, has only the requested today object with valid enum values, and correctly marks today as planned with no invented activity. The date, 45-minute moderate gym duration, indoor flag, 30 TSS, 220 W FTP and null bikeWorkout all match the current week plan. The main weakness is the description, which gives only a one-sentence intent with no exercises, sets, reps, rest periods, load guidance or stop conditions, despite the athlete explicitly asking for very specific strength workouts. The rationale is grounded in the athlete's quad adaptation and hip-hinge goals, but the claim that skipping reduces the fat-loss stimulus from muscle activation is weakly supported. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): today status must match the week's session on that date. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00278	anthropic/claude-haiku-5.5

Mentions Atlas FAIL	Block 1 changed FAIL	Block 1 starts 2026-10-21 FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the date, planned status, 45-minute moderate gym type, 220 W FTP, and indoor flags. The main weakness is that the description names no exercises, sets, reps, rest periods, or loads, even though the athlete explicitly asked for very specific strength workouts and the plan lists goblet squats, pulls, split squats, and rest guidance. It also adds an unplanned full-body circuit and gives no stop conditions, RPE guidance, or fallback for back discomfort, so the execution detail is thin. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): This endpoint's maximum context length is 32768 tokens. However, you requested about 45565 tokens (12797 of text input, 32768 in the output). Please reduce the length of either one, or use the context-compression plugin to compress your prompt automatically.. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

amazon/nova-lite-v1

3.5/12.5

Amazon: Nova Lite 1.0

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	48.1 s	$0.00462	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00276	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and TSS from the plan. The estimatedFtpWatts of 222 is the week 2 value rather than the current week's 220, a small mismatch. The description names the right exercises but gives no sets, reps, loads, rest periods or heart-rate stop conditions, even though the athlete asked for very specific strength prescriptions and the coach stressed 90 to 120 second rests with heart rate under 110 bpm. The rationale is generic about protecting the back and does not tie the session to the fat-loss goal or the block focus. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): week: sessions must contain exactly seven sessions; today: missing field: alternatives; today status must match the week's session on that date. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

56.9 s	$0.00229	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 0.5/2 · Design 1.3/3 · Rationale 1.4/2 · Grounding 1.0/2 · Detail 0.8/2

Judgment: The JSON is valid, has the required fields and correct enum values, and keeps the planned 45-minute moderate gym session with outdoor false and canBeOutdoor false. However, the status is set to completed even though no activity is recorded for 2026-10-30, and the description is written in future tense, so the status contradicts the content. The session outline names exercise categories but gives no exercises, sets, or reps, despite the athlete asking for very specific strength workouts. The rationale is grounded in the posterior-chain and sit-bone goals, and the rest-interval and flat-back cues are useful, but the load progression is missing.

RETURNED JSON

```
{
  "today": {
    "date": "2026-10-30",
    "status": "completed",
    "title": "Gym Strength B: Hip Hinge & Lower-Body Control",

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00274	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, has the right shape and enum values, and matches the planned Friday gym session in type, duration, intensity, and FTP. However, status is set to missed even though no activity is recorded for 2026-10-30 and the day is still open, so it should read planned. The description names the exercises but gives no sets, reps, loads, rest periods, or stop conditions, despite the athlete explicitly asking for very specific strength prescriptions. The rationale ties the session to hinge safety and fat loss in a reasonable way, but it is fairly generic and does not state the concrete loss from skipping. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): Provider returned error. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned indoor gym session dated 2026-10-30 with the planned 45-minute moderate duration, TSS 30 and FTP 220 W, and uses the required status and enum values. The exercise list reflects the athlete's progression (3 goblet squat sets at 12 kg, trap-bar pulls instead of floor deadlifts, 2 split squat sets) and the 90-120 s rest and HR cap from coach feedback, but it omits sets and reps for split squats and pulls detail, gives no load progression or stop conditions for back pain, and lacks the daily mobility circuit. The optionalRationale is empty and the rationale for why this session matters toward the fat-loss and back-strength goals is missing, which is a clear weakness since the schema requires a rationale for today's session. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

mistralai/mistral-small-24b-instruct-2501

2.9/12.5

Mistral: Mistral Small 3

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	132.2 s	$0.00274	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00270	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, has the requested single today object, and correctly keeps the 2026-10-30 date, 45-minute moderate gym workout, 220 W FTP and a 30 TSS estimate. The main failure is status set to completed, even though no activity is recorded for today (the latest recorded session is 2026-10-28), so the candidate invents a completed session. The description also just repeats the earlier coach text and never prescribes the specific exercises, sets, reps and loads the athlete asked for in strength training, so design and detail are thin. The rationale is reasonably tied to back health and long-distance goals but is somewhat generic and does not clearly name what is lost by skipping. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): week: session 1: missing field: bikeWorkout; week: session 2: missing field: bikeWorkout; week: session 3: missing field: bikeWorkout; week: session 4: missing field: bikeWorkout; week: session 5: missing field: bikeWorkout; week: session 6: missing field: bikeWorkout; week: session 7: missing field: bikeWorkout; today: missing field: alternatives; today: missing field: bikeWorkout. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

mistralai/ministral-14b-2512

2.9/12.5

Mistral: Ministral 3 14B 2512

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	154.3 s	$0.00744	no

HARD GATES	JUDGE COST	JUDGED
pass	$0.00396	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): no parseable JSON object in response. Season revision: The output is valid JSON with the eight keys, keeps block 1 starting on 2026-10-21, tiles the season contiguously, and names Atlas in the goal and block text. However, the season places the Atlas Race Preparation block in April to June 2027, after the 28 February race, and gives Atlas no taper or recovery before it, which breaks the chronological logic of the new goal. The candidate also marks today's 2026-11-01 run as completed with an invented note that it went as planned, although no activity was recorded, and it populates tomorrow even though the supplied tomorrow was null. Several rationales are meta-commentary about what changed, such as the block now acknowledging the 4-month limit, and the tomorrow interval durations total 75 minutes against a stated 60.

Several rationales are meta-commentary about what changed, such as the block now acknowledging the 4-month limit, and the tomorrow interval durations total 75 minutes against a stated 60.

RETURNED JSON

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, with durable aerobic endurance, efficient climbing cadence, and strength to handle mountainous terrain. Following this, prepare for Paris-Brest-Paris in August 2027 by maintaining cycling-specific endurance and strength, while also ensuring the ability to comfortably finish a randonneur brevet series (starting with a 200 km event in April 2027). Address the historical challenge of sustaining disciplined training beyond 4 months by structuring the season with clear deloads and progressive, manageable blocks.",
    "rationale": "The season now reflects three key goals: the Atlas Mountain Race (February 2027), the 200 km brevet (April 2027), and Paris-Brest-Paris (August 2027). The Atlas race demands high-altitude endurance and climbing efficiency, while the brevet series requires sustained pacing and durability. Paris-Brest-Paris will build on the endurance base established earlier. The season is structured to avoid overreaching by incorporating deloads every 4-6 weeks, aligning with the athlete's history of maintaining progress for only 4 months at a time. The first block focuses on aerobic durability and strength foundation, the second block transitions to winter cross-training (skiing/running) while maintaining cycling specificity, and the third block builds sustained power and endurance for the Atlas race. The final two blocks refine brevet-specific pacing and taper for the 200 km event, with a secondary focus on maintaining fitness for Paris-Brest-Paris.",

upstage/solar-mini4

2.8/12.5

Upstage: Solar Mini 4

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	89.2 s	$0.00379	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00274	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, uses the correct date, type and intensity values, and keeps the planned 45-minute strength duration and 220 W FTP. The main failure is status: the candidate marks today as completed even though the input records no activity for 2026-10-30, so it invents a completed session and should have kept the status as planned. The description names the right exercises but gives no sets, reps, loads, or rest periods for the rack pulls, split squats, or goblet squats, despite the athlete asking for very specific strength prescriptions. The rationale is specific to the block and the lower-back goal, though it does not state the concrete loss from skipping beyond general posterior-chain benefits. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): empty response content. Season revision: The season goal text is replaced with the athlete's new wording and block 1 still starts on 2026-10-21, but the season blocks are copied unchanged from the old Brevet-based plan. The plan still ends on 2027-04-04 and has no Paris-Brest-Paris or Atlas-specific build, so Atlas is named only in the goal text and never in a block name, focus or rationale. Block 1 is essentially unchanged apart from a rationale that narrates the earlier revision, which is meta-commentary. The current week and today's run are coherent, indoor-appropriate for the rain, and grounded in the supplied activities, but the output also returns two extra top-level keys beyond the eight requested. Hard gates failed: block 1 is unchanged.

RETURNED JSON

```
{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April. Whenever I
have been doing disciplined training, I have only been able to do so and maintain progress for a maximum of
4 months, usually less.",
    "rationale": "The season prepares the athlete for the Atlas Mountain Race on February 28, 2027, followed
by Paris-Brest-Paris in August 2027, and a randonneur brevet series starting April 2027. Given the athlete's
history of maintaining disciplined training for only 4 months maximum, the plan follows a conservative
aerobic-first progression, carefully managing fatigue. The first block emphasizes aerobic consistency,
cadence above 85 rpm, and low-load strength. The winter block preserves cycling specificity while using
skiing and easy running for cross-training durability. The build phase progresses sustained power and long
endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The
final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block 'Aerobic Base and Strength Foundation' (2026-10-21 → 2026-12-06) emphasizes
durable aerobic fitness, maintaining cadence above 85 rpm on flat riding, and establishing low-load full-
body strength while avoiding unnecessary fatigue. The actual week 1 performance (approximately 587 TSS from
unplanned race and strength activity) was higher stress than the intended recovery week. The block therefore
adopts a conservative adjustment to Week 2 rather than immediate increase in duration or intensity. Aerobic
work remains capped below 140 bpm, cadence should begin above 85 rpm from the first minute, strength must be
logged separately and either completed fully or deliberately reduced, and missed minutes should not be
recovered. A single controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable
aerobic execution, followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no
fresh threshold test or sustained power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid and has the required fields, but the central content is wrong. Today is 2026-10-30, where the recorded plan is a 45-minute gym session with no activity recorded, yet the candidate marks today as completed and swaps in the 2026-10-31 mountain hike, which is an invented completed activity and a replaced session. The description also borrows the 10-31 forecast figures (1.3 mm, gusts 4 m/s) and calls the day light rain, and the rationale invents a 15 percent volume figure. The hike instructions themselves (short steps, standing pauses on climbs, poles, mobility circuit afterwards) are practical and specific. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): week: session 1: missing field: bikeWorkout; week: session 2: missing field: bikeWorkout; week: session 3: missing field: bikeWorkout; week: session 5: missing field: bikeWorkout; week: session 6: missing field: bikeWorkout; week: session 7: missing field: bikeWorkout; today: optionalRationale must be a string; today: missing field: bikeWorkout. cohere/command-r7b-12-2024

2.5/12.5

Cohere: Command R7B (12-2024)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	103.5 s	$0.00275	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00278	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response marks today's Gym session as completed even though no activity is recorded for 2026-10-30, which invents a completed workout and should have been planned. The exercise prescription is reasonably specific, with rest and heart-rate cues and a 12 kg load, but it drifts from the week plan by using 2 goblet squat sets instead of 3 and adding both rack and trap-bar pulls. The optionalRationale is left empty even though it must name the adaptation the session builds and what is lost by skipping it. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00267	anthropic/claude-haiku-5.5

Mentions Atlas FAIL	Block 1 changed FAIL	Block 1 starts 2026-10-21 FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is well formed and keeps the requested today shape, but the status is set to completed even though no activity is recorded for 2026-10-30, which invents a finished session and breaks the fidelity rule. The description also contradicts itself by prescribing a 110 to 132 W ERG target for a gym strength session, and it gives no sets, reps, or loads even though the athlete asked for very specific strength prescriptions. The rationale is reasonably tied to back health and posture, but it does not state what is lost by skipping beyond generic wording. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): Provider returned error. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	76.6 s	$0.00760	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00250	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate keeps the correct date, status, workout type, moderate intensity, 45-minute duration, indoor flag and TSS, and the FTP of 220 W, so the core metadata matches the current plan. However, the description is just the generic phrase Strength training with 45 min and gives none of the exercises, sets, reps, rest periods, heart-rate caps or fallbacks that the athlete explicitly asked for and that the week plan specifies, such as elevated trap-bar pulls and two bodyweight split squat sets. The optionalRationale is empty and the required rationale explaining why this gym session matters for the hinge progression and fat loss goal is missing, so the response is largely a metadata echo rather than a coached plan. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): season: missing field: goal; season: missing field: rationale; season: missing field: startDate; season: missing field: endDate; season: block 1: missing field: focus; season: block 1: missing field: weekCount; season: block 2: missing field: focus; season: block 2: missing field: weekCount; season: block 3: missing field: focus; season: block 3: missing field: weekCount; block: missing field: focus; block: missing field: rationale; block: week 1: missing field: number; block: week 1: missing field: focus; block: week 1: missing field: targetLoad; block: week 1: missing field: estimatedFtpWatts; week: missing field: focus; week: missing field: rationale; week: missing field: estimatedFtpWatts; week: session 1: missing field: day; week: session 1: missing field: title; week: session 1: missing field: durationMinutes; week: session 1: missing field: status; week: session 1: missing field: estimatedTss; week: session 1: missing field: outdoor; week: session 1: missing field: canBeOutdoor; week: session 1: missing field: bikeWorkout; week: session 1: missing field: estimatedFtpWatts; week: session 2: missing field: day; week: session 2: missing field: title; week: session 2: missing field: durationMinutes; week: session 2: missing field: status; week: session 2: missing field: estimatedTss; week: session 2: missing field: outdoor; week: session 2: missing field: canBeOutdoor; week: session 2: missing field: bikeWorkout; week: session 2: missing field: estimatedFtpWatts; week: session 3: missing field: day; week: session 3: missing field: title; week: session 3: missing field: durationMinutes; week: session 3: missing field: status; week: session 3: missing field: estimatedTss; week: session 3: missing field: outdoor; week: session 3: missing field: canBeOutdoor; week: session 3: missing field: bikeWorkout; week: session 3: missing field: estimatedFtpWatts; week: session 4: missing field: day; week: session 4: missing field: title; week: session 4: missing field: durationMinutes; week: session 4: missing field: status; week: session 4: missing field: estimatedTss; week: session 4: missing field: outdoor; week: session 4: missing field: canBeOutdoor; week: session 4: missing field: bikeWorkout; week: session 4: missing field: estimatedFtpWatts; week: session 5: missing field: day; week: session 5: missing field: title; week: session 5: missing field: durationMinutes; week: session 5: missing field: status; week: session 5: missing field: estimatedTss; week: session 5: missing field: outdoor; week: session 5: missing field: canBeOutdoor; week: session 5: missing field: bikeWorkout; week: session 5: missing field: estimatedFtpWatts; week: session 6: missing field: day; week: session 6: missing field: title; week: session 6: missing field: durationMinutes; week: session 6: missing field: status; week: session 6: missing field: estimatedTss; week: session 6: missing field: outdoor; week: session 6: missing field: canBeOutdoor; week: session 6: missing field: bikeWorkout; week: session 6: missing field: estimatedFtpWatts; week: session 7: missing field: day; week: session 7: missing field: title; week: session 7: missing field: durationMinutes; week: session 7: missing field: status; week: session 7: missing field: estimatedTss; week: session 7: missing field: outdoor; week: session 7: missing field: canBeOutdoor; week: session 7: missing field: bikeWorkout; week: session 7: missing field: estimatedFtpWatts; today: missing field: title; today: missing field: durationMinutes; today: missing field: status; today: missing field: alternatives; today: missing field: rationale; today:

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00271	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The date, status, and JSON shape are correct, but the candidate replaces today's planned Friday Gym session (45 min, moderate) with tomorrow's Saturday mountain hike, so the core session is wrong. The description also cites the calmer Saturday weather window even though Friday's forecast is steady rain with gusts up to 7 m/s, so the grounding is inconsistent. optionalRationale is empty and optional is false, leaving no explanation of why this session serves the goal, and the description gives only a vague heart-rate cap with no stop conditions or rain fallback. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): today: optionalRationale must be a string. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response is valid JSON with the requested shape and matches the date, workout type, 45-minute duration, and moderate intensity. However, it marks today as completed even though no activity is recorded for 2026-10-30, which fabricates a completed session and contradicts the planned status. The description names the right session elements (elevated pulls and two split-squat sets) but gives no exercises, sets, reps, rest, or RPE guidance as the athlete requested for strength work. The optionalRationale is empty, so the session's purpose against the fat-loss, back-strength, and hip-hinge goals is never explained. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): season: block 1: missing field: weekCount; week: session 1: missing field: bikeWorkout; week: session 1: missing field: estimatedFtpWatts; week: session 2: missing field: bikeWorkout; week: session 2: missing field: estimatedFtpWatts; week: session 3: missing field: bikeWorkout; week: session 3: missing field: estimatedFtpWatts; week: session 4: missing field: bikeWorkout; week: session 4: missing field: estimatedFtpWatts; week: session 5: missing field: bikeWorkout; week: session 5: missing field: estimatedFtpWatts; week: session 6: missing field: bikeWorkout; week: session 6: missing field: estimatedFtpWatts; week: session 7: missing field: bikeWorkout; week: session 7: missing field: estimatedFtpWatts; today: missing field: bikeWorkout. Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON shape and enum types are valid, and the date and 45-minute moderate gym duration match the planned Friday session. However, the candidate marks today as completed and says you executed the session perfectly, but no activity is recorded for 2026-10-30 (the latest activity is 2026-10-28), so this invents a completed workout. The description gives no exercises, sets, reps, rest periods or load guidance despite the athlete asking for very specific strength prescriptions, and the rationale wrongly places the session in the Early Winter Base block rather than the current Autumn Re-Entry block. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

0.9/12.5

Inference.net: Schematron V2 Small

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	22.6 s	$0.00349	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00248	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate returns valid JSON with the correct date, status planned, workout type, moderate intensity and 45-minute duration matching the existing plan, and correctly sets outdoor to false. However, the description and optionalRationale are empty, so there is no exercise prescription, sets or reps, rest guidance, or explanation of why the gym session matters for fat loss or back resilience. The estimatedTss is 0 and estimatedFtpWatts is 0 despite a 220 W FTP being stated, so the required TSS and FTP estimates are missing and the contract is only partly met. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): week: session 1: missing field: estimatedTss; week: session 2: missing field: estimatedTss; week: session 3: missing field: estimatedTss; week: session 4: missing field: estimatedTss; week: session 5: missing field: estimatedTss; week: session 6: missing field: estimatedTss; week: session 7: missing field: estimatedTss; today: missing field: rationale. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): extract requires a response_format of type "json_schema" whose schema properties describe the entities to extract, or provider.options.scaledown.entities mapping each entity name to its definition. If entities were sent, check that the key is spelled "scaledown" and that this endpoint allows the "entities" passthrough parameter. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): extract requires a response_format of type "json_schema" whose schema properties describe the entities to extract, or provider.options.scaledown.entities mapping each entity name to its definition. If entities were sent, check that the key is spelled "scaledown" and that this endpoint allows the "entities" passthrough parameter. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.
