8.8/12.5

Thinking Machines: Inkling

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	136.3 s	$0.1020	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00609	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 1.5/3 · Rationale 1.1/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session with the right date, enum values, and bikeWorkout null, and it reflects the plan's Gym Strength B hinge and split squat focus with the athlete's requested specificity of exercises, sets and reps. However, it adds a 3x10 Pallof press and 3x12 glute bridges that are not clearly in the plan's Strength B outline, and the 30 kg pull load is an invented assumption not flagged as such. The optionalRationale and description are well tied to the athlete's back, sit-bone, and fat-loss goals, though the description lacks explicit stop conditions or fallback for back pain. Season revision: The output names Atlas in the season goal, block 3 focus and the week rationale, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null as required. However, block 1 is barely changed: its weeks are identical to the supplied plan and only the rationale gained a sentence, so the requested genuine revision is weak. The season never extends to Paris-Brest-Paris in August 2027, which is only mentioned in prose, and the block rationale contains meta-commentary about what remains unchanged. Past-day sessions are reasonably described and today's session is coherent with the athlete's constraints, but the Thursday missed session is typed as workout with intensity rest, which is inconsistent. Hard gates failed: block 1 is unchanged.

    "bikeWorkout": null,
    "description": "Your 45-minute Gym Strength B session builds the safe hip-hinge pattern and single-leg
stability you need for long-distance cycling posture and your 5 May 5K goal. Complete 3 sets of 8 elevated
knee-height rack or trap-bar pulls (~30 kg) with a flat back and 90 seconds rest, letting your heart rate
drop below 110 bpm between sets; then do 2 sets of 8 bodyweight split squats per leg. Add 3x10 Pallof press
per side and 3x12 glute bridges, then finish with your daily 8-minute hip/spine mobility circuit. This
protects your lower back, supports your sit-bone comfort on long rides, and keeps intensity moderate so you
do not trigger the evening hunger spikes that work against your fat-loss goal.",
    "optional": false,
    "optionalRationale": "Skipping this session delays your safe hip-hinge progression and split-squat
stability, which are essential for protecting your lower back on long climbs and for the running economy you
need for the 5K in May. Without today's elevated pulls and split squats, you miss the specific posterior-
chain and single-leg strength that prevents sit-bone blisters and back ache during the brevet series, and
you lose a key building block of this Autumn Re-Entry block's 4:1 loading structure."

{
  "season": {
    "goal": "Build durable aerobic endurance, efficient cadence, and low-load strength through winter, peak
for the Atlas Mountain Race on 28 February 2027, complete the 200 km brevet in April 2027, and prepare for
Paris-Brest-Paris in August 2027, while respecting a maximum four-month window of disciplined training.",
    "rationale": "The season runs from 21 October 2026 to 4 April 2027, covering the base, winter build,
Atlas Mountain Race peak, brevet-specific preparation, and taper. Your survey response confirms the Atlas
Mountain Race (28 February) as the first major peak, followed by the 200 km brevet in April and Paris-Brest-
Paris in August. Because you have maintained disciplined progress for no more than four months at a time,
the plan is structured in focused phases with strict heart-rate caps, cadence targets, and a planned deload
in Week 4, so fatigue does not accumulate before the February race. The winter block preserves cycling
specificity through indoor endurance and limited threshold work, uses skiing and easy running for cross-
training durability, and avoids concurrent high-load strength. The build phase then progresses sustained
power and long endurance riding, followed by brevet-specific pacing, fueling practice, and back-to-back
load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness. The 225 W FTP is retained as the baseline; no fresh threshold evidence supports a change.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change. Given your stated four-month discipline ceiling, this base
phase is kept to seven focused weeks with built-in deload, so you reach the Atlas Mountain Race on 28
February with durable fitness rather than accumulated fatigue.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race in
February.",

Google: Nano Banana Pro (Gemini 3 Pro Image Preview)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	A	C	65.0 s	$0.1484	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00635	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.6/3 · Rationale 1.3/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean, contains only the today object, and matches the planned 45-minute moderate gym session dated 2026-10-30 with correct indoor flags, FTP, and TSS. The exercise selection is sensible for rebuilding hip hinge control and core stability, with sets, reps, rest, and a heart-rate cue, but it gives no load progression or RPE guidance and describes the weight only as light-to-moderate. The rationale ties the session to back pain and saddle comfort but does not clearly state what the athlete loses by skipping it, and the description does not use the known gym access or the weekly plan's specific Gym B cues beyond the basics. Season revision: The candidate names Atlas throughout the season and block, keeps block 1 starting on 2026-10-21, and tiles the later blocks without gaps through 2027-04-04. However, it silently drops Paris-Brest-Paris in August 2027 from the season goal and dates, and the season ends in April, so the athlete's stated long-term target is missing. It also returns ten top-level keys instead of the eight requested, gives past sessions non-null estimatedFtpWatts values, and rewrites today's supplied description and empties its alternatives even though no activity was recorded today. The current week and today's session are coherent and concrete, with sensible indoor timing and heart-rate caps, but the season design is incomplete.

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.3/3 · Rationale 1.4/2 · Grounding 1.7/2 · Detail 1.2/2

Judgment: The JSON is clean, contains only the today object, and matches the planned 45-minute moderate gym session dated 2026-10-30 with correct indoor flags, FTP, and TSS. The exercise selection is sensible for rebuilding hip hinge control and core stability, with sets, reps, rest, and a heart-rate cue, but it gives no load progression or RPE guidance and describes the weight only as light-to-moderate. The rationale ties the session to back pain and saddle comfort but does not clearly state what the athlete loses by skipping it, and the description does not use the known gym access or the weekly plan's specific Gym B cues beyond the basics.

    "bikeWorkout": null,
```

```
    "description": "Focus on safe posterior-chain loading and single-leg control to complement Tuesday's
squat session. Keep the effort controlled and take full rest periods to manage fatigue.\n\n**Warm-up:**
Perform your daily 8-minute hip/spine mobility routine if not yet done.\n\n**Main Workout:** Complete the
following exercises. Take 90–120 seconds of rest between sets, ensuring your heart rate drops below 110 bpm
before starting the next set.\n\n1.  **Elevated Rack Pull or Trap-Bar Deadlift (Knee-Height):** 3 sets of 8–
10 reps. Use a light-to-moderate weight. Focus on a flat back, hinging at the hips, and driving through your
heels to stand tall. Do not pull from the floor.\n2.  **Bodyweight Split Squat:** 2 sets of 10–12 reps per
leg. Control the descent, keeping your torso upright and front heel planted. (Limited to 2 sets to manage
quad fatigue).\n3.  **Seated Cable Row or Dumbbell Row:** 3 sets of 10–12 reps. Focus on squeezing your
shoulder blades together with a controlled release.\n4.  **Dead Bug (Core):** 3 sets of 10–12 reps per side.
Keep your lower back pressed firmly into the floor and move slowly and deliberately.\n\n**Cool-down:**
Gentle stretching for hamstrings, glutes, and quads.",
    "optional": false,
    "optionalRationale": "This session is essential for safely rebuilding the hip hinge mechanics and core
stability necessary to prevent back pain on the bike, balancing the load from Tuesday's squat-focused
workout."

SEASON REVISION

7.6/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
45.3 s	**$0.0923**	**no**	**yes**	**200**	**stop**

Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.6/3 · Rationale 1.3/2 · Grounding 1.3/2 · Detail 1.4/2

Judgment: The candidate names Atlas throughout the season and block, keeps block 1 starting on 2026-10-21, and tiles the later blocks without gaps through 2027-04-04. However, it silently drops Paris-Brest-Paris in August 2027 from the season goal and dates, and the season ends in April, so the athlete's stated long-term target is missing. It also returns ten top-level keys instead of the eight requested, gives past sessions non-null estimatedFtpWatts values, and rewrites today's supplied description and empties its alternatives even though no activity was recorded today. The current week and today's session are coherent and concrete, with sensible indoor timing and heart-rate caps, but the season design is incomplete.

z-ai/glm-4.5-air

Z.ai: GLM 4.5 Air

8.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	144.6 s	$0.0125	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00636	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.8/2 · Design 1.4/3 · Rationale 0.9/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and 220 W FTP, so the contract and fidelity are solid. The exercise list is specific with sets, reps and rest, and it respects the hinge and split-squat limits from the block plan. However, it drops the goblet squat progression that the week plan explicitly says to hold at three sets, and it adds bodyweight work the athlete finds boring without comment. The rationale ties the session to back safety and hip hinge rebuilding, but says little about the fat-loss target or weekly load, and the 40-50 kg rack pull starting load is an unflagged assumption. Season revision: The season was refreshed credibly: it names Atlas, adds an Atlas build block ending 28 February 2027, keeps the April brevet and a Paris-Brest-Paris build, and the blocks tile to the new season end. However, the current block is effectively unchanged from the supplied version, with the same name, focus, rationale and weeks, so the required genuinely changed block 1 is not delivered and Atlas appears nowhere in it. The block rationale also uses meta phrasing such as remain unchanged, and the Atlas build has no explicit taper before the race. The current week and today's session are sensible and consistent with the supplied data, and the empty bodyMetrics and null tomorrow, nextWeek and nextBlock are handled correctly. Hard gates failed: block 1 is unchanged.

    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

8.7/12.5

Google: Nano Banana 2 (Gemini 3.1 Flash Image)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	16.6 s	$0.0274	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00612	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.3/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON contract is valid with the correct date, planned status, workout and moderate fields, and the 45-minute duration matches the week plan for the Friday gym session. The design is sensible: split squats, elevated trap-bar pulls, Pallof presses and planks follow the block's hinge-safe progression, and rest guidance is given. However the prescription deviates from the plan by using 3 sets of pulls and 3 sets of split squats where the plan caps split squats at 2 sets, and it omits the explicit set-level load guidance the athlete asked for, while the rationale is reasonably grounded in the back-pain goal but does not mention the fat-loss or hunger considerations for the session. Season revision: The response is valid, keeps the eight top-level keys, keeps block 1 starting on 2026-10-21, keeps the next week and next block null, and tiles the season contiguously through 2027-08-22 with the Atlas race named in the season goal and in the block 2 name. However, block 1 is essentially the supplied block with only its rationale reworded, its weeks are unchanged, and it contains meta-commentary about what remains unchanged, so the required genuine change to the current block is weak. The current week and today's session also show no Atlas-specific adaptation, and the four-month training ceiling is handled only by generic deload language rather than an explicit reset plan. Grounding is good, using the supplied FTP, weather, and activity history without invented metrics. Hard gates failed: block 1 is unchanged.

  "season": {
    "goal": "Train for long-distance cycling, starting with the Atlas Mountain Race on 28 February 2027,
followed by a randonneur brevet series including a 200 km in April, and culminating in Paris-Brest-Paris in
August 2027. The plan must manage fatigue carefully to support consistent progress beyond your typical four-
month limit.",
    "rationale": "The season goal is updated to reflect your entry into the Atlas Mountain Race (AMR) in
February 2027 and Paris-Brest-Paris (PBP) in August 2027, alongside the April brevet series. This requires a
significant shift in focus: AMR is a self-supported off-road ultra-endurance event, demanding specific
technical skills, bike handling, and extreme durability, while PBP is a 1200 km road randonnée. The plan now
prioritizes building a massive aerobic base and strength foundation through the autumn, followed by AMR-
specific preparation (off-road riding, loaded bike handling, multi-day fatigue management) in the winter.
Post-AMR, the focus shifts to road-specific randonneuring skills, pacing, and fueling for the brevet series
and PBP. To address your history of maintaining progress for only four months, the progression is
conservative, with regular deload weeks and a strong emphasis on recovery and managing non-training stress,
ensuring you build sustainable fitness for this ambitious multi-event season.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose, with all recorded aerobic efforts staying
under the 140 bpm ceiling, despite the lack of cadence-specific cycling. Tuesday and Friday strength
sessions were completed, along with a Wednesday rowing/running double. Thursday's ride was missed, and
Saturday's planned 90-minute trainer ride was substituted with a 2 h 05 min hike at 114 bpm average. Fatigue
remains low, and the week closes with a short, controlled run rather than a make-up ride. Missed minutes are
not recovered, and Sunday is kept deliberately short to ensure you arrive fresh for Week 3's first
controlled threshold stimulus. The 30-minute run maintains running-specific durability at minimal cost. The
priority of cadence above 85 rpm from the first minute of every ride carries into next week, as repeatable
efficiency is crucial for your long-distance goals.",

openai/gpt-5.6-luna-pro

8.7/12.5

OpenAI: GPT-5.6 Luna Pro

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	69.6 s	$0.0352	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00577	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.8/2 · Design 0.9/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, and a gym workout consistent with the week plan's Friday Gym Strength B. The exercise list follows the plan (elevated pulls, two split squat sets, Pallof, planks, lat pulldowns) and rest and heart-rate guidance match the coach replies, though the description gives 3 sets of split squats rather than the 2 bodyweight sets the plan caps. The rationale ties the session to posterior-chain and posture goals and the brevet season, but it does not state a concrete cost of skipping beyond general statements, and it omits the planned 2-set cap in the explanation. Load guidance for pulls and pulldowns is somewhat vague, and the description includes a treadmill warm-up that is reasonable given the gym access. Season revision: The block 1 start date of 2026-10-21 is kept, the blocks tile correctly, tomorrow, nextWeek and nextBlock stay null, and the week has seven sessions with a matching today entry. However, the season was not truly re-planned for the new goal: the endDate remains 2027-04-04 with a taper placed after the Atlas Mountain Race on 28 February 2027, which is chronologically wrong, and Paris-Brest-Paris in August 2027 is absent from the season. Atlas appears only in the block 3 focus and the season goal text, and block 1 is largely the prior block with light edits to weekly targets. The current week and today's session are coherent, grounded in the logged activities and the 140 bpm and cadence cues, but they are generic outline-level detail for a rider who asked for power targets.

qwen/qwen3.5-397b-a17b

8.7/12.5

Qwen: Qwen3.5 397B A17B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	B	56.8 s	$0.0540	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00647	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.6/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid and the date, planned status, indoor flags, 45-minute moderate workout, 30 TSS, 220 W FTP and null bikeWorkout all match the plan, though it adds an extra rationale field inside today. The session is weak on prescription: it names only elevated rack or trap-bar pulls and two split-squat sets with no reps, loads, or other exercises, despite the athlete asking for very specific gym sets and reps. The rest, heart-rate cue and mobility follow-up are grounded in the recent feedback, but the description lacks load guidance, RPE or stop conditions and fallbacks. Season revision: The output is valid JSON with the correct top-level keys, seven current-week sessions, a correctly tiled season, and tomorrow, nextWeek and nextBlock correctly null, and it names Atlas in the season, a block name and the block 3 focus. However, block 1 is barely changed: its name, focus, dates and all seven week rows are identical to the supplied plan, with only the block rationale rewritten, which weakly meets the requirement for a genuinely changed block 1. The Atlas build block ends on race day (2027-02-28) with no taper before the event, even though the season rationale claims every event has a taper, and the plan does not address the four-month sustainability limit with an explicit reset. Past sessions also carry non-null estimatedFtpWatts values where the instructions require null. Hard gates failed: block 1 is unchanged.

    "bikeWorkout": null,
```

```
    "description": "Gym Strength B session focusing on elevated knee-height rack pulls or trap-bar pulls to
safely rebuild your hip hinge without overloading your lower back, plus two bodyweight split-squat sets to
maintain leg strength while your quads recover from Tuesday's goblet squats. Take 90-120 seconds rest
between sets so your heart rate drops below 110 bpm before each set. Complete your 8-minute hip and spine
mobility circuit after the workout.",
    "optional": false,
    "optionalRationale": "This session builds posterior-chain resilience and hip-hinge mechanics essential
for your cycling posture and back health. Skipping it delays your ability to handle longer rides without
lower-back ache and reduces the strength foundation needed for your spring tour races and Paris-Brest-Paris
goal.",
    "rationale": "Following your strong execution of Tuesday's Gym Strength A where you completed all three
goblet squat sets with manageable quad burn, Friday's Gym Strength B continues your twice-weekly strength
rhythm while protecting your lower back through elevated pulling movements. This fits your Autumn Re-Entry
block's focus on conservative gym strength with safe hinge progression, supporting your fat-loss goal
through moderate-intensity work that won't trigger evening hunger spikes, and building the core stability
you need to eliminate back pain on long climbs."

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, then a 200 km brevet in April 2027, and
Paris-Brest-Paris in August 2027. Build sustainable training habits that can be maintained for up to 4
months at a time, with aerobic durability, efficient cadence, and strength to handle long-distance cycling
and varied terrain.",
    "rationale": "The season spans from October 2026 through August 2027 to cover three major events: Atlas
Mountain Race (late February), a 200 km brevet (April), and Paris-Brest-Paris (August). Given your history
of maintaining disciplined training for a maximum of 4 months, the plan uses shorter training blocks with
built-in consolidation periods to sustain progress without burnout. The first block emphasizes aerobic
consistency and cadence efficiency before introducing threshold work. Winter months preserve cycling while
using skiing and running for cross-training durability. Each event has dedicated preparation and taper
phases, with volume reductions of 40-50% before key races while retaining brief intensity for readiness.",

    "type": "workout",
    "title": "Short Easy Aerobic Run",
    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 steps per minute. Keep the effort conversational from the
first minute and let pace fall away rather than pushing heart rate up on any incline. Indoors because rain
and 7 m/s gusts are forecast through the day.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this session would lose the running-specific durability that supports
your cycling base through winter months when outdoor riding is limited by weather. While the fatigue cost is
minimal, the cumulative effect of maintaining multi-sport movement patterns matters for long-term injury
prevention and aerobic capacity across different modalities.",

8.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	C	49.1 s	$0.1380	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00650	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid, uses the requested today object, and matches the planned 45-minute moderate indoor gym session with 30 TSS, 220 W FTP, and the outdoor and bikeWorkout flags set correctly. The session follows the block plan well: elevated rack or trap-bar pulls replace floor deadlifts, split squats are capped at two sets, and the 90-120 second rest and heart-rate recovery cue are concrete. Weaknesses are that the core circuit round count is vague, no loads or RPE guidance are given for the pulls, there is no stop condition for back pain, and the warm-up mentions an elliptical not in the athlete's listed equipment. The rationale ties the session to hinge rebuilding and fat loss but stays fairly generic about the loss from skipping. Season revision: The candidate names Atlas in the season goal, block rationale and today rationale, keeps block 1 starting on 2026-10-21, and changes weeks 3 to 7 of the block, so the core checks pass. The season is badly built: the blocks stop at 2027-04-11 while the season endDate is 2027-08-31, leaving April to August untiled, and Paris-Brest-Paris and the brevet series are absent. The AMR Race and Recovery block starts 2027-02-22, before the 28 February race, and no taper precedes it. The current week and today's session are coherent, with correct dates, seven sessions and a dropped alternatives array on today, but the rationale is partly generic.

pass	$0.00638	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.2/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, with the correct date, planned status, gym workout type, 45 minutes, indoor flags, FTP of 220 W and TSS of 30 consistent with the plan. The exercise list is sensible for the hinge and core goals and reflects the two-set split squat cap and knee-height pulls. However, it gives no load progression, no RPE or rep-in-reserve guidance, and omits the heart-rate-below-110 rest cue the athlete's coach has repeatedly asked for, and the rationale claims the session builds hip flexibility, which a strength session does not directly address. Season revision: The season was rebuilt around Atlas on 28 February 2027 with Paris-Brest-Paris kept in August, and the blocks tile contiguously from 2026-10-21 to 2027-08-31 with block 1 still starting on 2026-10-21. Block 1 is barely changed, though: its weeks are copied from the supplied plan and only its rationale was reworded to mention Atlas, so the required genuine change is weak. The current week and today's run do not reference Atlas at all, and the plan runs structured training for roughly five months before the brevet series, which exceeds the athlete's stated four-month ceiling despite the rationale citing it. The JSON contract, null handling for tomorrow and next items, and FTP and bodyMetrics handling are correct.

Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.2/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 0.9/2

Judgment: The season was rebuilt around Atlas on 28 February 2027 with Paris-Brest-Paris kept in August, and the blocks tile contiguously from 2026-10-21 to 2027-08-31 with block 1 still starting on 2026-10-21. Block 1 is barely changed, though: its weeks are copied from the supplied plan and only its rationale was reworded to mention Atlas, so the required genuine change is weak. The current week and today's run do not reference Atlas at all, and the plan runs structured training for roughly five months before the brevet series, which exceeds the athlete's stated four-month ceiling despite the rationale citing it. The JSON contract, null handling for tomorrow and next items, and FTP and bodyMetrics handling are correct.

OpenAI: GPT-4.1

8.6/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	19.5 s	$0.0799	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00599	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.9/2 · Design 0.9/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate returns only the requested today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, FTP 220 W and TSS 30, matching the plan's Friday gym session. The exercise list is sensible for the back-protective Gym B focus, with specific sets, reps, rest, and a heart-rate cue drawn from the coach feedback. Detail is limited: there is no load guidance for the elevated pulls, no RPE or rep-in-reserve targets, and no fallback if the athlete reports back pain. The rationale ties the session to the back and saddle problems, though it stays somewhat generic about the block's loading goal. Season revision: The response keeps block 1 starting on 2026-10-21, tiles the later blocks through 2027-04-04, leaves tomorrow and the next levels null, and gives seven sessions with a detailed easy run for today. However, Atlas appears only in the season goal and block rationale, while the season shape, block names, and taper still target the April 200 km brevet and end on 2027-04-04, after the Atlas date of 28 February 2027, so the plan does not really build toward the new primary goal. Block 1 weeks are essentially unchanged from the supplied plan, the rest of the season ignores the four-month maintenance ceiling, and bodyMetrics returns nulls instead of an empty array. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "Full-body gym session focused on safe hip-hinge mechanics, lower-body strength, and core
stability. Complete 3x10–12 elevated rack or trap-bar pulls (bar set just below knee height, light load,
flat back), 2x10 bodyweight split squats per leg, 3x12 glute bridges, 3x10 lat pulldowns (progress up to 50
kg if form is solid), 3x10/side Pallof press, and 3x30s plank holds. Take 90–120 seconds rest between sets,
ensuring your heart rate drops below 110 bpm before each new set. Finish with your 8-minute hip and spine
mobility routine. This session builds foundational posterior-chain strength and core stability to protect
your back and prepare your hips for more demanding cycling and running later in the season.",
    "optional": false,
    "optionalRationale": "This session directly builds the hip and core strength needed to eliminate back
pain and saddle discomfort on long rides, while reinforcing safe lifting mechanics to prevent injury as you
increase training load. Skipping it would slow your progress toward pain-free endurance and delay your
ability to safely add intensity or volume in both cycling and running."

google/gemma-4-31b-it

8.5/12.5

Google: Gemma 4 31B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	70.8 s	$0.00421	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00619	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 1.0/2 · Design 1.0/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned Friday gym session on 2026-10-30 in date, duration, intensity, TSS, FTP and indoor flags. The exercise list is sensible and follows the block's hinge progression, with rest caps tied to the athlete's heart-rate guidance and the 3 rack-pull and 2 split-squat sets from the plan. Weaknesses are vague load guidance ('a weight that feels moderate' with no RPE or progression), no fallback for pain or missing equipment, and a rationale that does not name the week's target load. Season revision: The response keeps block 1 starting on 2026-10-21, tiles the later blocks with no gaps, and names Atlas in the season goal and block 3 focus, so the mechanical checks pass. However, the season puts the Atlas race on 28 February 2027 at the end of block 3 with no Atlas taper, and the brevet taper and race readiness blocks are placed after Atlas, so the race-readiness logic is inverted. Block 1 is almost unchanged from the supplied version apart from its rationale, and the current week and today's session are essentially the supplied ones with no Atlas-specific preparation. The season also ignores the athlete's four-month ceiling by running a 21-week PBP block without a reset, and the output adds coachQuestion and modelsRemarks keys beyond the eight requested top-level keys.

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.7/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, uses the correct date, planned status, moderate 45-minute workout, indoor flags, and the 220 W FTP, and matches the week's Friday gym slot. The exercise selection follows the plan's hinge and split-squat limits and gives explicit sets, reps, rest, and a back-discomfort fallback, though the pull load is left as moderate without a concrete starting reference. The rationale ties the session to posterior-chain resilience and sit-bone pressure, but the closing line that missing one session is manageable sits awkwardly with the optional false setting. Season revision: The response is valid, keeps block 1 starting on 2026-10-21, gives seven week sessions and names Atlas in the season goal and block rationale. However, block 1 is essentially unchanged in name, focus and week structure, and the season dates still end on 2027-04-04 with no Paris-Brest-Paris block, no build or taper keyed to the 28 February Atlas race, and no response to the four-month training ceiling. Past sessions carry estimatedFtpWatts of 0 instead of null, and today's workout title and description were rewritten rather than kept with a completion note.

Judgment: The JSON is valid, uses the correct date, planned status, moderate 45-minute workout, indoor flags, and the 220 W FTP, and matches the week's Friday gym slot. The exercise selection follows the plan's hinge and split-squat limits and gives explicit sets, reps, rest, and a back-discomfort fallback, though the pull load is left as moderate without a concrete starting reference. The rationale ties the session to posterior-chain resilience and sit-bone pressure, but the closing line that missing one session is manageable sits awkwardly with the optional false setting.

RETURNED JSON

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B — Elevated hinge & split-squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Purpose: build safe hip-hinge mechanics and unilateral leg control to protect your lower back on long rides and improve saddle comfort while adding muscle-preserving strength that supports steady fat loss. Warm-up (10 min): 8-minute daily hip/spine mobility circuit + 2–3 minutes easy aerobic (bike/row) and 2 sets of very light bodyweight hip hinges. Main (30 min): 1) Elevated knee-height rack or trap-bar pulls — 3 sets x 5 reps, moderate load focused on a flat back and controlled descent; rest 90–120 seconds between sets and only start the next set once heart rate has dropped below ~110 bpm. 2) Bodyweight split
```

```
squats — 2 sets x 8 reps per leg, slow controlled tempo, full balance focus. 3) Glute bridges — 3 sets x 12
reps (easy/moderate) to load the posterior chain without heavy spinal compression. 4) Pallof press — 2 sets
x 10 reps per side for anti-rotation core stability. Cool-down (5 min): light mobility and breathing, then
your 8-minute hip/spine mobility circuit. Execution notes: keep loads conservative (technical form over
weight), leave 1–2 reps in reserve on every set, take the full 90–120 s rest so HR falls toward 90–110 bpm
before each set to protect your back. If any low-back discomfort occurs, reduce load or substitute lighter
block/trap-bar pulls and increase mobility time.",
    "optional": false,
    "optionalRationale": "This session specifically trains posterior-chain resilience, hip-hinge motor
control, and unilateral stability that reduce back pain and sit-bone pressure on long rides; skipping it
delays rebuilding the safe hinge pattern and posterior strength we need before increasing cycling volume,
and repeated misses would slow your fat-loss progress by reducing muscle-preserving stimulus. Missing a
single session is manageable, but keep at least one gym strength session this week to retain progress."
  }
}

Qwen: Qwen3.5-122B-A10B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	107.8 s	$0.0457	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00651	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 1.1/3 · Rationale 1.2/2 · Grounding 1.5/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate matches the required date, planned status, gym workout type, 45-minute duration, moderate intensity, indoor flag, 220 W FTP and 30 TSS, and its exercise set follows the current week plan with the capped split squats and elevated pulls. The main weaknesses are that optionalRationale is left empty even though the required field should name the adaptation and what is lost by skipping, and the description gives no loads, progression rule, or stop conditions for the rack pulls, split squats or Pallof press. The extra rationale key inside today is a minor contract deviation. Season revision: The output is valid, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null and returns empty bodyMetrics, and it names Atlas in the season goal and in block 3. However, block 1 is barely changed: its name, focus and all seven week entries are identical to the supplied plan, and neither its name, focus nor rationale mentions Atlas. The season tiling has mismatched week counts (the 2027-03-01 to 2027-04-04 block is 5 weeks but is labelled 3, and the PBP block is about 9 weeks but labelled 8) and no taper precedes the Atlas race that ends block 3. The block rationale also refers to the athlete's feedback in meta terms. Today's session is grounded and sensible but is carried over from the old plan without Atlas-specific reasoning. Hard gates failed: block 1 is unchanged.

TODAY PLAN

9.7/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
49.4 s	$0.0251	no	yes	200	stop

Contract 1.4/1.5 · Fidelity 1.9/2 · Design 2.3/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.2/2

Judgment: The candidate matches the required date, planned status, gym workout type, 45-minute duration, moderate intensity, indoor flag, 220 W FTP and 30 TSS, and its exercise set follows the current week plan with the capped split squats and elevated pulls. The main weaknesses are that optionalRationale is left empty even though the required field should name the adaptation and what is lost by skipping, and the description gives no loads, progression rule, or stop conditions for the rack pulls, split squats or Pallof press. The extra rationale key inside today is a minor contract deviation.

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

#111

qwen/qwen3.7-max

Qwen: Qwen3.7 Max

8.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	137.4 s	$0.1136	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00626	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.8/2 · Design 1.2/3 · Rationale 0.8/2 · Grounding 1.4/2 · Detail 0.9/2

Combined judgment: Today plan: The candidate matches the planned Friday gym session on date, status, type, intensity, duration, TSS, FTP and indoor flags, and correctly sets bikeWorkout to null. The exercise list is specific, with sets, reps, rest and a heart-rate recovery target that respects the athlete's back and lower-body constraints. It is weaker on execution detail: it gives no load guidance for the pulls or split squats, no RPE or stop conditions, and no fallback if a movement aggravates the back. The rationale ties the session to posterior-chain resilience and cycling posture, but it does not connect to the weekly load target. Season revision: The season is refreshed well: it names Atlas in block 3, keeps block 1 starting on 2026-10-21, and tiles the blocks through 2027-08-29 with Paris-Brest-Paris in the final phase. The current block, however, is returned essentially unchanged from the supplied version, with the same name, focus, dates and week texts, and its rationale still says the content 'remain[s] unchanged', so the required genuinely changed block 1 is missing and the meta-commentary rule is breached. The season also has no taper before the 28 February Atlas finish, and the week and today sessions are sensible and grounded but largely carried over. Hard gates failed: block 1 is unchanged.

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

8.4/12.5

Google: Gemini 3.1 Flash Lite Preview

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	7.8 s	$0.0118	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00636	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.0/2 · Design 1.2/3 · Rationale 1.0/2 · Grounding 1.5/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid and the today object matches the planned Friday gym session: date 2026-10-30, workout, moderate, 45 minutes, indoor, no bikeWorkout, and an FTP of 220 W. The exercise list follows the plan's Gym Strength B (elevated pulls, two split-squat sets) and the coach's 90-120 second rest guidance, with sensible sets and reps. Weaknesses: it gives no load guidance for the pulls, pulldowns or split squats despite the athlete's prior loads being known, no RPE or stop conditions, and the rationale is somewhat generic about hinge adaptation rather than tying it to the back-pain and saddle-pressure goals in concrete terms. Season revision: The response names Atlas in the season goal, season blocks and block 3, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null, so the hard checks pass. However, block 1 is barely changed: the name, focus and week structure are kept, and the detailed weekly targetLoad text is collapsed to single words like High and Moderate, which loses detail. The season has no taper before the 28 February Atlas race, and block 4 runs about six months to August 2027 without a reset, ignoring the athlete's stated four-month ceiling. The rationales often describe the plan as being updated or adjusted, and bodyMetrics contains a null entry even though the input states no body metrics.

TODAY PLAN

tencent/hy3-preview

8.4/12.5

Tencent: Hy3 preview

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	164.5 s	$0.0141	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00574	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.7/2 · Design 0.9/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate keeps the planned Friday gym session with correct date, status, duration, moderate workout intensity, indoor flag and FTP, and it follows the week's hinge and split squat limits from the plan. The main weakness is that the description adds a lat pulldown progression, glute bridges and Pallof work without fully specifying the squat, pull and accessory loads, and the 10 reps per leg and 3 sets of pulls are not tied to the athlete's known 12 kg goblet squat or 50 kg pulldown numbers. The rationale is specific to the back, hips and fat-loss goals, but it slightly overreaches by claiming the session will let you touch the floor, which is not a stated outcome of this session. Season revision: The response names Atlas in the season goal, block rationale, week rationale and today rationale, keeps block 1 starting on 2026-10-21, keeps seven week sessions and leaves tomorrow, nextWeek and nextBlock null, which satisfies the mechanical checks. The main weakness is that the plan was not really re-planned for Atlas: blocks 2 to 5 are copied unchanged, brevet prep still runs to late March 2027 after the Atlas date, and Paris-Brest-Paris in August 2027 is absent because the season still ends on 2027-04-04. Block 1 keeps identical weeks, focus and dates, with only the rationale text changed, so it is not a genuinely changed block. Today's session and week content are concrete, athlete-grounded and consistent with the input, and bodyMetrics is correctly empty. Hard gates failed: block 1 is unchanged.

TODAY PLAN

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Elevated Pulls & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Indoor gym session: 5-minute easy warm-up (e.g., light treadmill walk), then elevated
knee-height rack or trap-bar pulls (light load, 3 sets of 10 reps focusing on flat-back hip hinge), followed
by 2 sets of bodyweight split squats (10 reps per leg). Take full 90–120 seconds of rest between sets so
heart rate drops below 110 bpm before each pull and split-squat set. Include accessory work: 3x12 glute
bridges, lat pulldowns (progress toward ~50 kg for 10 reps), 3x10 per side Pallof press, and 3x30s plank.
Conclude with your daily 8-minute hip and spine mobility circuit (couch stretch/low lunge, forward fold,
90/90 hip rotations, deep squat hold, figure-4 glute stretch, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds posterior-chain strength and core stability that directly
protect your lower back and improve cycling posture for Paris-Brest-Paris, serving the Autumn Re-Entry
block's focus on conservative gym strength and Week 1's target of two multimodal gym sessions for steady fat
loss. The elevated hinge progression safely rebuilds your hip mobility so you can eventually touch the floor
and reduce sit-bone pressure on long rides. If you skip it, your back and hips miss a critical stimulus to
adapt to loaded movement, raising injury risk when early winter fatbike and ski sessions begin and delaying
your path to pain-free endurance cycling."
  }
}

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week. This supports the early-
season goal of durable aerobic base for the Atlas Mountain Race and April brevet, within your maximum four-
month disciplined training window.",

mistralai/mistral-medium-3.1

8.4/12.5

Mistral: Mistral Medium 3.1

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	25.7 s	$0.0155	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00614	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.1/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, has the exact today object with correct date, planned status, workout and moderate enum values, and an estimated FTP of 220 W matching the profile. The session matches the planned Gym Strength B at 45 minutes, and the prescription uses sets and reps, rest periods, heart rate ceilings and a mobility finish that follow the athlete's stated constraints. Weaknesses: the session drops the planned 2-set split squat cap and lists 3x8 rack pulls and 3x10 cable rows that were not in the existing plan, and the 40-50 kg loads are assumed without stating that assumption, while the rationale is reasonably specific but does not mention the weekly 7-8 hour target load. Season revision: The response is valid, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and names Atlas in the season goal and the block rationale. However, block 1 is essentially unchanged: its seven week entries are identical to the supplied plan and nothing in the current week or today's session is adjusted toward Atlas, so the required genuine change to block 1 is weak. The season rationale contradicts its own blocks by describing two 16-week blocks with 3-week tapers when the listed blocks are seven, and it ignores the athlete's stated four-month ceiling by running disciplined training continuously from October to August. The PBP specific block's week count also does not match its dates.

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build durable aerobic fitness, efficient cadence, and low-load strength without stacking
fatigue",
    "rationale": "This block establishes the aerobic foundation and movement efficiency you need for Atlas
Mountain Race, the 200 km brevet, and Paris-Brest-Paris. Your recent training shows good aerobic control
(e.g., 2:25 hilly ride at 137 W, 2 h 05 min hike at 114 bpm) but also fatigue from unplanned high-intensity
work (3-hour Zwift race at 187 bpm HR). The block therefore prioritizes strict heart-rate control (<140 bpm
for aerobic sessions), cadence above 85 rpm on flat riding, and low-load strength to avoid stacking fatigue.
Volume progresses conservatively to 5–6 hours/week by Week 5, with a deload in Week 4 to absorb the load. No
threshold work is introduced until Week 3, and only if Week 2 demonstrates stable execution. The 225 W FTP
baseline is retained as no fresh threshold evidence justifies a change.",

deepseek/deepseek-v4-pro-0813

8.4/12.5

DeepSeek: DeepSeek V4 Pro 0813

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	29.6 s	$0.0226	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00596	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.8/1.5 · Fidelity 0.8/2 · Design 1.0/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, contains only the today object with the correct date, planned status, workout type, moderate intensity, 45 minutes and indoor flags, and the session matches the week plan's Friday Gym entry. The exercise prescription is specific with sets, reps, rest and a stop condition, and it follows the coach's hinge substitution and split squat caps. However, the description adds a 3x8-10 rack pull and lat pulldown at 40-50 kg that the coach notes did not prescribe exactly, and the 2x8-10 split squat volume plus a 3x30 s plank and 5 minute mobility make the 45 minute total only loosely checked. The rationale is grounded in the back and sit-bone problems but does not explicitly reference the week's load target or the fat-loss goal. Season revision: The response names Atlas in the season goal and block rationale, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and grounds today's run and the week in the supplied activities, weather and 225 W FTP. However, the season was not truly re-planned: the blocks still end on 2027-04-04 with the old brevet-and-taper shape, so the season does not build to the Atlas race on 28 February 2027 as a peak nor extend to Paris-Brest-Paris in August 2027, despite naming PBP in the goal. Block 1's name, focus and weeks are essentially unchanged apart from a rewritten rationale, so the block change is thin. The top level also adds coachQuestion and modelsRemarks beyond the eight keys the request asked for. Hard gates failed: block 1 is unchanged.

km brevet in early April 2027, and Paris-Brest-Paris in August 2027, while respecting a four-month
sustainable training limit.",
    "rationale": "The season now targets three long-distance cycling goals: the Atlas Mountain Race on 28
February 2027, a 200 km brevet in early April 2027, and Paris-Brest-Paris in August 2027. Because the
athlete has historically maintained disciplined training for at most four months, the plan is built in
sustainable blocks with regular deloads and cross-training rather than a continuous high-load build. The
first block establishes aerobic durability, cadence efficiency, and low-load strength. The winter block
preserves cycling specificity while using skiing and easy running for durability. The build phase then
progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing
cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining
brief intensity for race readiness.",

and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

moonshotai/kimi-k2

8.4/12.5

MoonshotAI: Kimi K2 0711

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	76.1 s	$0.0241	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00635	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.0/2 · Design 1.5/3 · Rationale 1.1/2 · Grounding 0.7/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, and the 45-minute moderate gym workout on 2026-10-30 with 220 W FTP and TSS 30 fits the plan, with outdoor and canBeOutdoor correctly false. The main weakness is that it prescribes bodyweight good mornings even though the athlete explicitly said they cannot go straight to good mornings without getting injured, which is a safety and grounding lapse. The rationale is specific to the sit-bone, posture and back-ache goals, and the sets, reps, rest and heart-rate guidance are concrete, though split-squat and pull loads lack a clear progression or RPE target. Season revision: The season is refreshed with Atlas as the first goal, the blocks tile contiguously through August 2027, block 1 keeps its 2026-10-21 start, and tomorrow and nextWeek and nextBlock stay null. However, block 1 is barely changed: its name and focus are identical to the input and only its rationale gains an Atlas reference, and the season ignores the athlete's four-month training ceiling by running roughly ten months of continuous blocks with no reset. The most serious problem is grounding: the 2026-11-01 run, which was only planned and has no recorded activity, is marked completed with a description claiming you completed approximately 30 minutes, which invents a result. Several rationales also read as commentary on what changed (for example Week 3 now introduces a threshold stimulus), rather than stating the plan as it stands. Hard gates failed: block 1 is unchanged.

    "description": "Your second gym session of the week focuses on safe posterior-chain loading and single-leg stability to rebuild your hip hinge without stressing your lower back. After a 5-minute general warm-up (light rowing, cycling, or walking), complete 2 sets of 8 bodyweight good mornings with hands behind head, hinging only to the point where you feel a gentle hamstring stretch while keeping your back flat—stop well before any rounding. Then 3 sets of 8 reps of elevated knee-height rack pulls or trap-bar deadlifts at 40-50 kg, resting 90-120 seconds between sets until your heart rate drops below 110 bpm; focus on driving hips forward and squeezing glutes at the top, never pulling with your lower back. Follow with 2 sets of 8 bodyweight split squats per leg (rear foot elevated on a low step if comfortable), keeping torso upright and front knee tracking over toes. Finish with 3 sets of 10 Pallof presses per side at a moderate cable resistance, and 3 sets of 45-second front planks. Conclude with your 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength and hip mobility that directly enables a more aerodynamic, pain-free cycling posture—eliminating the upright position that causes your sit-bone blisters and back ache on long climbs. The elevated hinge progression protects your injury-prone lower back while teaching proper hip-hinge mechanics; skipping today delays your ability to safely load heavier pulls and squats in coming weeks, leaving you stuck with the same postural limitations that hurt you on the bike. The split squats and Pallof presses develop the single-leg stability and anti-rotation core control that keep your pelvis stable during long rides, reducing back fatigue. You lose a full week of safe hinge adaptation and core-postural development if you skip this."

SEASON REVISION

6.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
63.8 s	**$0.0146**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 1.0/2 · Design 1.5/3 · Rationale 1.1/2 · Grounding 0.7/2 · Detail 1.2/2

Judgment: The season is refreshed with Atlas as the first goal, the blocks tile contiguously through August 2027, block 1 keeps its 2026-10-21 start, and tomorrow and nextWeek and nextBlock stay null. However, block 1 is barely changed: its name and focus are identical to the input and only its rationale gains an Atlas reference, and the season ignores the athlete's four-month training ceiling by running roughly ten months of continuous blocks with no reset. The most serious problem is grounding: the 2026-11-01 run, which was only planned and has no recorded activity, is marked completed with a description claiming you completed approximately 30 minutes, which invents a result. Several rationales also read as commentary on what changed (for example Week 3 now introduces a threshold stimulus), rather than stating the plan as it stands.

{
  "season": {
    "goal": "Atlas Mountain Race (February 28, 2027), Paris-Brest-Paris (August 2027), and 200 km brevet series completion",
    "rationale": "Your season now targets three distinct endurance events: the Atlas Mountain Race as the first major goal, the 200 km brevet series as preparation and validation, and Paris-Brest-Paris as the culminating event. This demands a longer, more patient progression than a single brevet, with particular attention to your history of maintaining disciplined training for only 4 months at a time. The season therefore builds in deliberate consolidation phases, uses winter skiing and running for aerobic durability without cycling overload, and sequences the blocks so you arrive at each event fresh rather than accumulated. The Atlas Mountain Race in late February requires sustained power over variable terrain and self-sufficiency, while PBP in August demands the deepest aerobic base you have ever built. The brevet series in April serves as both proof of readiness and a controlled rehearsal for the longer events.",

writer/palmyra-x5

8.4/12.5

Writer: Palmyra X5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	B	64.2 s	$0.0422	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00690	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.0/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean and the today object matches the required date, planned status, workout type, moderate intensity, 45 minutes, indoor gym flags, and the 220 W FTP and 30 TSS from the plan. The session is well grounded in the athlete's recent goblet squat fatigue, back sensitivity and heart-rate rest guidance, with a sensible hinge, core and glute emphasis. However, the split squat prescription is internally inconsistent (it says 2 sets and then 3x8 per leg, while the plan caps split squats at 2 sets), the starting load of 40-50 kg for the pulls is an unflagged assumption, and there are no explicit stop conditions or progression rules. Season revision: The response names Atlas in the season goal and in a block name, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and keeps the seven week sessions correctly dated with today matching. However, block 1 is not genuinely changed: its weeks, focus and targetLoad are copied from the supplied plan and only the rationale is rewritten. The season logic is also flawed: the Atlas race on 2027-02-28 sits at the end of block 3, and the Atlas taper block only starts on 2027-03-01, after the race, so there is no real pre-race taper. Several weekCount values do not match their date spans, the April brevet loses its taper, and the response returns two extra top-level keys beyond the eight requested. Today's session is kept faithfully from the supplied plan, but its rationale and the week do not explicitly tie the aerobic work to the Atlas build. Hard gates failed: block 1 is unchanged.

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Today's gym session focuses on building safe hip hinge mechanics and core stability
while protecting your lower back and allowing your quads to recover from Tuesday's goblet squats. Perform
elevated rack pulls or trap-bar pulls from knee height with light to moderate load (start at 40–50 kg, 3x8–
10 reps) to reinforce a flat-back hinge without overloading. Follow with 2 sets of bodyweight split squats
(3x8 per leg) with controlled tempo and full range of motion, focusing on hip mobility rather than leg
fatigue. Include 3x12 glute bridges (progressing to feet-elevated if comfortable), 3x10 Pallof presses per
side for anti-rotation core strength, and finish with 3x30-second planks. Take 90–120 seconds of rest
between sets to let your heart rate drop below 110 bpm, ensuring controlled effort and quality movement.
Complete your 8-minute daily hip and spine mobility circuit afterward.",
    "optional": false,
    "optionalRationale": "This session is essential for rebuilding posterior-chain strength and safe hip
hinge mechanics, directly supporting your long-term goal of pain-free, powerful cycling and injury
prevention. Skipping it would delay your progress in developing core and hip resilience, which is
foundational for both fat loss through efficient movement and long-distance comfort on the bike."

{
  "season": {
    "goal": "Train for long-distance cycling, with the Atlas Mountain Race on February 28, 2027 as the
primary target, followed by Paris-Brest-Paris in August 2027, and a series of randonneur brevets in between
starting with a 200 km in April 2027. Given the athlete’s history of maintaining disciplined training for no
more than 4 months at a time, the season structure prioritizes focused, sustainable blocks with built-in
durability and recovery to avoid burnout.",
    "rationale": "The season now reflects the updated goal: the Atlas Mountain Race is the primary peak,
requiring rugged endurance, climbing resilience, and self-supported durability, followed by a transition to
Paris-Brest-Paris, which demands extreme stamina and pacing over 1200 km. The brevet series in April serves
as a critical intermediate milestone to validate pacing, fueling, and equipment. Given the athlete’s self-
reported limit of 4 months of sustained training, the plan is structured into focused, non-extendable blocks
with deliberate recovery and cross-training to prevent burnout. The progression builds aerobic durability
first, then introduces sustained climbing and load tolerance, followed by event-specific simulations and
tapering. Winter skiing and year-round running support aerobic continuity without overloading the cycling-
specific system.",

    "rationale": "This block establishes the aerobic foundation required for the Atlas Mountain Race,
focusing on consistent, low-stress endurance work to avoid burnout given your history of sustaining training
for only 4 months at most. Every session is designed to stay strictly aerobic (HR < 140 bpm), with cadence
above 85 rpm from the first minute to build efficient pedal stroke under fatigue. Strength work is kept
light and fully logged to prevent accidental leg fatigue. The progression is conservative: Week 1 absorbed
unexpected load from a 3-hour race and pole vaulting, so Weeks 2–3 rebuild volume cautiously before
introducing a single threshold stimulus. Week 4 is a planned deload to consolidate gains. This approach
ensures durability without overreaching, setting up the winter build for sustained climbing and load
tolerance.",

qwen/qwen3-235b-a22b-thinking-2507

8.4/12.5

Qwen: Qwen3 235B A22B Thinking 2507

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	100.0 s	$0.0627	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00621	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.8/2 · Design 1.0/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, has the exact today shape, and matches the required date, planned status, moderate 45-minute indoor gym workout, and FTP of 220 W. The session is sensible for the back-protection goal, but it lacks the exercise-level specificity the athlete explicitly asked for: no sets, reps, or loads for the elevated pulls and split squats, and no fallback if the pulls aggravate the lower back. The rationale is concrete and tied to the season goal and sit-bone and back issues, though the detail section would be stronger with load progression and explicit stop conditions. Season revision: The JSON is well formed, block 1 starts on 2026-10-21, tomorrow, nextWeek and nextBlock stay null, and the week and today objects are consistent with each other. The main failure is design: Atlas appears only in the season goal and rationale, while the block plan, block names and week focus never prepare for the 28 February 2027 race, and the season still ends on 2027-04-04 with no Paris-Brest-Paris in August 2027. The season rationale also promises a mid-January deload that no block actually contains, and the block 1 rewrite is minimal, with the block name and most weeks unchanged. The current week and today's session are coherent and well grounded in the logged activities, but they do not serve the new goal.

8.3/12.5

Dots Studio: Dots3-Note Preview (free)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	D	A+	462.8 s	$0	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00621	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.3/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid with the requested today object and correct date, status planned, workout and moderate values, 45 minutes, indoor and non-bike settings, and FTP 220 W. The session is a plausible Gym Strength B with hinge, split squat, glute bridge, Pallof and plank work, and it honours the 90-120 second rest and sub-110 bpm guidance. However, it adds a rationale field that is fine, but the description gives 3 sets of 30-45 second planks and a 3x12 bridge without load guidance, and the split squat and pull loads are not specified against the athlete's known weights. The rationale and optionalRationale are specific to back pain and saddle blisters, but the claim that this is non-negotiable and that skipping causes the ache is overstated, and the session does not explicitly mention the daily mobility circuit or the weather context. Season revision: The response names Atlas in the season goal, the block rationale and the new season blocks, keeps block 1 starting on 2026-10-21, and the season blocks tile correctly. However, the block 1 weeks are essentially unchanged from the supplied plan, so the block is not genuinely re-planned for the Atlas goal. The season drops any taper before the Atlas race, ends in April 2027 without planning anything toward Paris-Brest-Paris in August, and gives the intervening brevet series only a thin treatment. The past Wednesday entry was merged and given a new TSS of 95 and the missed Thursday was retyped as rest, which alters recorded history. Today's session is correctly left as supplied with a rationale that is mostly athlete-grounded. Hard gates failed: block 1 is unchanged.

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B",
    "type": "workout",
```

```
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Today's session is Gym Strength B, a 45-minute routine targeting posterior chain and
core stability. Begin with a 5-minute warm-up including light cardio and dynamic stretches. Perform 3 sets
of 10 reps of elevated knee-height rack or trap-bar pulls, focusing on a flat-back hip hinge and taking 90-
120 seconds of rest between sets to keep your heart rate below 110 bpm. Follow with 2 sets of 10 reps per
leg of bodyweight split squats, controlling the tempo. Complete 3 sets of 12 glute bridges, 3 sets of 10
reps per side of Pallof press for anti-rotation core strength, and 3 sets of 30-45 second planks. Finish
with a 5-minute cool-down stretching your hips and lower back. This specific combination of exercises builds
the core and hip strength needed to eliminate your back pain on climbs and prevent saddle blisters on long
rides.",
    "optional": false,
    "optionalRationale": "Skipping this session means losing the critical stimulus for posterior chain and
core stability, which directly causes the lower-back ache on long climbs and the saddle discomfort from your
upright position. Without this progressive loading, your hip flexibility and back resilience will stagnate,
increasing injury risk during the upcoming winter base and spring brevet series. This session is non-
negotiable for building the pain-free, durable foundation required for your 200 km brevet and Paris-Brest-
Paris goals.",
    "rationale": "Today's Gym Strength B session is a cornerstone of your Autumn Re-Entry block, designed
specifically to address your lower-back vulnerability and hip flexibility deficits. By focusing on elevated
knee-height rack pulls and controlled split squats, we safely rebuild your posterior chain and hip stability
without the heavy spinal loading that previously caused injury. This directly supports your primary goals of
fat loss and core strength, ensuring you can comfortably handle long bike rides and climbs without saddle
discomfort or back pain. Skipping this session would stall your critical back-protection adaptations and
delay your progress toward a pain-free, powerful cycling posture for Paris-Brest-Paris."
  }
}
```

SEASON REVISION

7.6/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

qwen/qwen3.7-flash

8.3/12.5

Qwen: Qwen3.7 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	112.8 s	$0.00288	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00626	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.0/2 · Design 1.2/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object with correct date, planned status, workout and moderate enums, 45 minutes, indoor flag and FTP 220 W, matching the current week's Friday gym session. The exercise set is specific with sets and reps and a rest rule, and it respects the plan's goblet squat, pull and split squat caps, though it adds a Pallof press and plank that were not in the week plan and the 3 x 10 goblet squat and 3 x 8 pulls go beyond the prior feedback that squats should stay at 12 kg with reduced volume. The rationale is grounded in the block focus and the hinge and core goals but leans on generic phrases about metabolic control, and the description omits fallbacks for pain or equipment limits and load progression guidance. Season revision: Atlas appears in the season goal and in block 1's rationale, and block 1 still starts on 2026-10-21 and the later blocks tile contiguously to the season end. However, block 1's name, focus, dates and weeks are copied unchanged, so it is not genuinely revised, and no block name or focus after block 2 names Atlas, while block 3 ends on race day with no taper. The plan also runs roughly four and a half months without a reset before Atlas, past the athlete's stated four-month ceiling. Past sessions carry an estimatedFtpWatts of 225 where the contract requires null, and the response returns ten top-level keys rather than the eight requested. Hard gates failed: block 1 is unchanged.

TODAY PLAN

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Hinge, Split-Squat & Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Indoor gym session focused on safe posterior-chain development and core anti-rotation.
Complete the following circuit three times, resting 90–120 seconds between sets to let your heart rate drop
below 110 bpm before each lift. Warm up with 5 minutes of cat-cows, bird-dogs, and glute bridges. Main
lifts: (1) Goblet Squat at 12 kg for 3 × 10 reps, focusing on controlled depth and an upright torso; (2)
Elevated knee-height rack or trap-bar pulls for 3 × 8 reps, emphasizing a flat-back hip hinge and driving
through the heels; (3) Bodyweight split squats for 2 × 8–10 reps per leg, prioritizing balance and a smooth
descent; (4) Pallof press for 3 × 10 reps per side to build rotational core stability; (5) Plank for 3 × 30
seconds to reinforce anterior core endurance. Finish with 5 minutes of gentle hamstring and hip flexor
stretching.",
    "optional": false,
    "optionalRationale": "This session directly supports the Autumn Re-Entry block's focus on conservative
gym strength and safe hinge progression, aligning with this week's target load of introducing multimodal
foundation work. Skipping it delays the posterior-chain and core-stability adaptations required to maintain
a pain-free cycling posture over increasing ride durations. Without this targeted loading, your lower back
remains vulnerable to fatigue on longer weekend rides, and you lose the structured metabolic control that
keeps evening hunger manageable during this fat-loss phase."

  "season": {
    "goal": "Complete the Atlas Mountain Race (February 28, 2027), followed by a randonneur brevet series
including a 200 km event in April 2027, and Paris-Brest-Paris in August 2027. Structure training into
disciplined blocks of up to four months with dedicated recovery periods to manage fatigue and sustain long-
term progress.",
    "rationale": "The season now spans from October 2026 through August 2027, anchored by the Atlas Mountain
Race in late February, a 200 km brevet in April, and Paris-Brest-Paris in August. Given your history of
sustaining disciplined training for a maximum of four months, the season is divided into focused blocks
separated by explicit recovery and transition phases. This prevents burnout, allows physiological
adaptation, and ensures you peak appropriately for each major event. The initial winter block builds aerobic
durability and strength, followed by a threshold-focused block ending precisely on race day for the Atlas
Mountain Race. A three-week recovery block bridges to the April brevet, which then transitions into a longer
endurance phase for PBP, complete with tapered peaks for each target.",

qwen/qwen3-235b-a22b-2507

8.3/12.5

Qwen: Qwen3 235B A22B Instruct 2507

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	186.0 s	$0.00721	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00609	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 30 TSS and 220 W FTP, matching the current week's Friday gym slot. The exercise selection follows the plan's hinge progression with knee-height pulls, capped split squats, glute bridges, Pallof presses and planks, and it correctly reflects the 110 bpm recovery cue from recent feedback. The rationale ties the session to back protection and fat-loss consistency but is somewhat generic and does not spell out the week's target load or the aerobic benefit. Detail is limited: no load guidance or RPE/rep-in-reserve targets for the pulls and split squats, no stop condition for back or hip pain, and no fallback if the knee-height pull setup is unavailable. Season revision: The season goal text names the Atlas Mountain Race and Paris-Brest-Paris, and block 1 keeps its 2026-10-21 start, so the mechanical checks pass only narrowly. However, the season blocks after block 1 are carried over unchanged and the season still ends on 2027-04-04, so the plan never builds toward Atlas on 28 February 2027 and never extends to Paris-Brest-Paris in August 2027. Block 1 is barely changed: its weeks and focus are the same as before and the block rationale never mentions Atlas. The week and today sessions are coherent and grounded in the logged activities, with the 30-minute indoor run fitting the forecast, but the outline days and today carry null estimatedFtpWatts where the instructions require estimates from today onward.

TODAY PLAN

  "season": {
    "goal": "Train for long-distance cycling with the Atlas Mountain Race on February 28, 2027 as the first
major goal, followed by Paris-Brest-Paris in August 2027, and comfortably completing a randonneur brevet
series in between, starting with a 200 km in April 2027.",
    "rationale": "The season goal has been updated to reflect the athlete's full calendar of events: the
Atlas Mountain Race in February 2027 as the first peak, followed by Paris-Brest-Paris in August 2027, with
the 200 km brevet in April 2027 as an intermediate milestone. Given the athlete's history of maintaining
disciplined training for no more than 4 months at a time, the season is structured in focused, progressive
blocks with built-in fatigue management and deloads to sustain motivation and adaptation. The early blocks
prioritize aerobic durability, cadence efficiency, and low-load strength to build a resilient base without
burnout. Winter training preserves cycling specificity while incorporating skiing and running for cross-
training. The build phase progresses sustained power and long endurance, followed by brevet-specific pacing,
fueling, and equipment preparation. The plan respects the athlete's limited tolerance for prolonged training
stress by capping intensity early and introducing threshold work conservatively only after aerobic control
is demonstrated.",

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.7/2 · Design 1.0/3 · Rationale 1.0/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The response is valid JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and FTP 220 W, matching the week plan for Friday. The session follows the plan well: knee-height rack pulls, two split squat sets, rest periods and the Pallof and bridge accessories, with sensible heart rate guidance. Weaknesses include the glute bridge and Pallof sets (2 each) and the rack pull set count that differ from the athlete's requested specificity, the 3 sets of rack pulls against the plan's note about holding the hinge conservatively, and an unexplained 'keep heart rate below 120' target that conflicts with the 110 bpm rest guidance used elsewhere. The rationale is specific and grounded in back pain and cycling posture, though it does not mention the fat-loss goal tied to this session. Season revision: The response names Atlas in the season goal and the block rationale, keeps block 1 starting on 2026-10-21, and keeps tomorrow, nextWeek and nextBlock null, so the three hard checks pass. The main weakness is that the season was not re-planned: the five blocks are the old ones, the season still ends on 2027-04-04, and Paris-Brest-Paris in August 2027 has no block at all, while no Atlas-specific build or taper block was added. Block 1 keeps its name, focus and every week unchanged apart from the rationale, and that rationale and the season rationale use meta phrasing such as remain unchanged and now includes. The current week and today's session are coherent and grounded in the supplied activities, forecast and constraints, with seven sessions and sensible indoor placement. Hard gates failed: block 1 is unchanged.

    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B — safe hip hinge and lower-body stability session. Warm up 5 minutes with light cardio and dynamic hip/spine mobility. Main set: (1) Elevated knee-height rack pulls or trap-bar pulls — 3 sets of 8–10 reps with a flat-back hip hinge, controlled tempo, 90–120 seconds rest between sets so your heart rate drops below 110 bpm before each set; (2) Bodyweight split squats — 2 controlled sets of 8–10 reps per leg, keeping your front knee tracking over your ankle and your torso upright, 90–120 seconds rest between sets. Accessory: (3) Glute bridges — 2 sets of 12 reps, squeezing at the top; (4) Pallof press — 2 sets of 10 reps per side, bracing your core against rotation. Cool down 5 minutes with hip and spine mobility stretches. Focus on a flat-back hip hinge during the elevated pulls to protect your lower back, and keep your quads fresh by not pushing past comfortable effort on the split squats. Heart rate should stay below 120 bpm throughout.",
    "optional": false,
    "optionalRationale": "This session builds the hip-hinge strength and posterior-chain resilience that directly protect your lower back during long rides and everyday movement, and it progresses the safe hinge mechanics started in Tuesday's Gym Strength A. The elevated rack/trap-bar pulls reinforce the upright cycling posture that reduces sit-bone pressure on very long rides, while controlled split squats build single-leg stability for both running and hiking. Skipping this session means your back and hip hinge miss a key adaptation week, slowing your path toward pain-free cycling posture and the core strength needed for the brevet series and your 5K goal."

  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, the 200 km brevet in April 2027, and build toward Paris-Brest-Paris in August 2027, working within sustainable four-month discipline windows",
    "rationale": "The season is structured around the athlete's updated multi-event long-distance cycling goal. Recent training supports a conservative aerobic-first progression: the athlete responded well to controlled indoor riding and sustained hiking, but the three-hour race at 187 bpm average HR and additional pole-vaulting load show a need to manage fatigue carefully. The first block emphasizes aerobic consistency, cadence, and low-load strength before introducing limited threshold work. The winter block preserves cycling while using skiing and easy running for cross-training durability. The build phase progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness. The athlete's self-acknowledged limit of about four months of disciplined training per block shapes the conservative progression across all phases.",

    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged. The athlete's
updated goal now includes the Atlas Mountain Race on 28 February 2027, the 200 km brevet in April 2027, and
Paris-Brest-Paris in August 2027, with a self-acknowledged limit of about four months of disciplined
training. This aerobic base block establishes the durability needed for all three events within the first
sustainable training window. Week 1 carried a higher-than-intended load of roughly 587 TSS due to the three-
hour race, additional strength and pole-vaulting work, and the long hike, so Week 2 stays conservative
rather than escalating. Aerobic work remains capped below 140 bpm, cadence should begin above 85 rpm,
strength must be logged separately and either completed fully or deliberately reduced, and missed minutes
are not recovered. A single controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates
stable aerobic execution. The 225 W FTP baseline is retained because no fresh threshold test or sustained
power evidence justifies a change.",

Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.9/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, has only the requested today object, and matches the planned 2026-10-30 gym session on date, duration, moderate intensity, 220 W FTP, TSS 30 and indoor flags. The exercise prescription is specific, with sets, reps, rest, a heart-rate gate below 110 bpm and cool-down, and it uses the athlete's coach feedback on rest and the back. Weaknesses: the description adds a third split-squat-free Pallach and plank block that is reasonable but does not give load guidance or a fallback for pain, and the split-squat volume of two sets is stated per leg in a way that is slightly ambiguous. Season revision: The response names Atlas in the season goal and in a new block, and keeps block 1 starting on 2026-10-21 with all eight keys present. However the season is chronologically broken: the Atlas block runs from 2027-04-05 to 2027-02-27 (end before start), and the post-Atlas PBP block starts 2027-02-28 and overlaps the Atlas date while the older April brevet and taper blocks remain ahead of Atlas. Block 1 is essentially unchanged apart from a copied rationale that contains meta-commentary about alignment with the new goal, so the current block is not genuinely re-planned for Atlas. The week and today are largely unchanged, the rest-day status is set to completed rather than rest, and the outline days show no Atlas-specific preparation. Hard gates failed: block 1 is unchanged.

    "bikeWorkout": null,
    "description": "Complete Gym Strength B in the full gym: warm up with 5 minutes of light cardio and
dynamic hip/spine mobility. Perform elevated knee-height rack or trap-bar pulls for 3 sets of 8–10 reps at a
controlled pace, taking 90–120 seconds of rest between sets so your heart rate drops below 110 bpm before
each set to protect your lower back. Follow with two bodyweight split-squat sets of 10–12 reps per leg,
focusing on depth control and keeping your torso upright. Finish with 3 rounds of Pallof presses (10 reps
per side) and 3x30-second planks, then cool down with your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session is essential for rebuilding your safe hip hinge pattern and
posterior-chain strength without overloading your quads or lower back. Skipping it would delay your ability
to progress into heavier loaded movements next week and leave you vulnerable to compensatory strain during
hikes and rides."

SEASON REVISION

5.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
17.8 s	**$0.00782**	**no**	**yes**	**200**	**stop**

Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.9/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Judgment: The response names Atlas in the season goal and in a new block, and keeps block 1 starting on 2026-10-21 with all eight keys present. However the season is chronologically broken: the Atlas block runs from 2027-04-05 to 2027-02-27 (end before start), and the post-Atlas PBP block starts 2027-02-28 and overlaps the Atlas date while the older April brevet and taper blocks remain ahead of Atlas. Block 1 is essentially unchanged apart from a copied rationale that contains meta-commentary about alignment with the new goal, so the current block is not genuinely re-planned for Atlas. The week and today are largely unchanged, the rest-day status is set to completed rather than rest, and the outline days show no Atlas-specific preparation.

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

qwen/qwen3-vl-235b-a22b-instruct

8.3/12.5

Qwen: Qwen3 VL 235B A22B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	185.0 s	$0.0134	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00599	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.7/2 · Design 0.7/3 · Rationale 1.0/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The session matches the plan for Friday 2026-10-30: a 45-minute moderate gym workout, indoor flag false, FTP 220 W and TSS 30, with the split squat volume capped at two sets as the coach asked. The exercise selection is sensible for the back-pain goal, with rack pulls, split squats, Pallof presses, and planks, and the 90 to 120 second rest matches the coach feedback. Weaknesses are that no loads or progression guidance are given for the rack pulls, there are no stop conditions or pain fallbacks, and the rationale is somewhat generic about injury risk rather than tied to the block's specific hinge progression. Season revision: The JSON has the eight required keys, seven week sessions, a matching today session, an empty bodyMetrics array, and block 1 starts on 2026-10-21. However, the season was not really re-planned: the five season blocks are copied from the old plan, the season still ends on 2027-04-04, Atlas on 28 February 2027 has no build or dedicated block, and Paris-Brest-Paris is absent from the season structure. Block 1 is effectively unchanged apart from a sentence in its rationale that names Atlas, so the required genuinely changed block is missing. The rationale fields also contain meta-commentary such as the goal now explicitly includes and remains unchanged, and the today session is essentially the supplied one. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

Mistral Large 2407

8.3/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	37.3 s	$0.0579	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00621	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.3/2 · Grounding 0.7/2 · Detail 1.4/2

Combined judgment: Today plan: The response is valid JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes and indoor flag, and it keeps the planned Gym session and uses the 220 W FTP. The exercise prescriptions are specific with sets, reps, rest and cues, and they follow the block's hinge progression, though the 3 sets of 8 pulls and 3 sets of plank go beyond the planned 3 goblet-squat and 2 split-squat limits and the lat pulldown load of 50-55 kg is not clearly tied to the athlete's last 50 kg set. The optionalRationale is grounded in the back-pain goal and the block's loading rhythm, but the Week 3 reference is slightly speculative, and the athlete's own gym comment about the quads is not addressed. Season revision: The JSON shape is valid, block 1 starts on 2026-10-21, the later blocks tile the season, tomorrow, nextWeek and nextBlock stay null, and Atlas is named in the season goal and blocks. The main design failure is chronological: the Atlas taper and race-readiness block is dated 2027-03-22 to 2027-04-04, after the 28 February race, so no Atlas taper precedes the event and the April 200 km brevet is not shown as a preparation target. The grounding is also weak, since today's run is marked completed with invented heart-rate figures (118-132 bpm, felt controlled) although the input records no activity for 1 November. Past sessions were also rewritten, merging the 28 October rowing and run into one session.

TODAY PLAN

    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "This session builds safe hip-hinge mechanics and posterior-chain resilience to eliminate your lower-back pain on long climbs and carpentry work. After a 5-minute general warm-up (treadmill walk or rowing machine at 100–110 bpm), perform:\n\n1. Elevated Knee-Height Rack or Trap-Bar Pulls – 3 sets × 8 reps at a controlled tempo (2 sec up, 1 sec pause, 3 sec down), starting with an empty bar or 10–15 kg. Rest 90–120 sec between sets, letting your heart rate drop below 110 bpm before each set. Focus on a flat back and neutral spine; if your lower back rounds, reduce the pull height or weight.\n\n2. Bodyweight Split Squats – 2 sets × 8 reps per leg, using a bench or box for support if needed. Keep your torso upright and front knee tracking over your toes. Rest 60 sec between sets.\n\n3. Lat Pulldown – 3 sets × 10 reps at 50–55 kg, using a slow eccentric (3 sec down) to protect your shoulders. Rest 60 sec between sets.\n\n4. Pallof Press – 3 sets × 10 reps per side with a cable or band at chest height, holding each press for 2 sec. Rest 45 sec between sets.\n\n5. Plank – 3 sets × 30 sec, focusing on deep core engagement and steady breathing. Rest 30 sec between sets.\n\nFinish with your 8-minute daily hip and spine mobility circuit: couch stretch, standing forward fold, 90/90 hip rotations, deep squat hold, supine figure-4 glute stretch, and cat-cow.",
    "optional": false,
    "optionalRationale": "Skipping this session would delay the safe rebuilding of your hip-hinge strength and core stability, directly undermining your goal of eliminating lower-back pain on long climbs and carpentry work. The elevated pulls and split squats are the foundation for a pain-free posterior chain, and the controlled tempo and rest intervals ensure your back adapts without injury. Missing this session would also disrupt the 4:1 loading rhythm of the block, increasing the risk of connective-tissue overload in Week 3 when we expand volume."
  }

accounts for the athlete's history of maintaining disciplined training for only 4 months. The progression is
conservative, with strict heart-rate and cadence control to avoid early burnout. Week 1's higher-than-
planned load (587 TSS) due to unplanned race and strength activity supports a cautious approach to Week 2,
with no threshold work until Week 3. Strength sessions are kept light and logged separately to manage leg
load. The block's 7-week structure ensures a gradual rebuild of endurance volume, with a deload in Week 4 to
absorb fatigue before the winter block. The 225 W FTP baseline is retained, as no fresh threshold test or
sustained power evidence justifies a change.",

Perplexity: Sonar Pro Search

8.3/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	D	37.4 s	$0.1596	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00595	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.8/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate correctly keeps today's planned gym session with date, status planned, moderate intensity, 45 minutes, indoor flag and FTP of 220 W, and gives concrete sets and reps for the hinge, squat, pulls and core work consistent with the coach replies. Weaknesses: the session drops the 3-set goblet squat and the plan's specified split-squat load handling is loosely described, the description does not mention heart-rate targets the athlete asked for in strength work, and the rationale is generic about the cycling posture rather than tied to the week's target load. The 5 minutes of easy treadmill or cycling warm-up is a reasonable addition, and the stop conditions for back pain add useful safety detail. Season revision: The response is valid JSON, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and names the Atlas Mountain Race in the season goal and block rationale. The season is largely the old one with renamed blocks: it still ends on 2027-04-04, never reaches Paris-Brest-Paris in August 2027, and places no Atlas-specific build or taper around 28 February 2027, with a taper placed before the April brevet instead. Block 1 is essentially unchanged apart from a rationale edit and small load wording, and the current week and today's session are coherent but generic about the Atlas goal.

qwen/qwen3.6-35b-a3b

8.2/12.5

Qwen: Qwen3.6 35B A3B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	45.1 s	$0.0159	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00631	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 1.2/2 · Detail 1.2/2

Combined judgment: Today plan: The session is correctly marked planned, dated 2026-10-30, indoor and non-outdoor, moderate 45-minute gym work with the planned 30 TSS and 220 W FTP, and it follows the coach's stated Week 1 changes such as rack pulls in place of floor deadlifts and two split-squat sets. The description gives concrete sets, reps, rest and a heart-rate recovery gate, with a sensible warm-up and cool-down. Weaknesses: no working loads are given for the rack pulls or split squats, the Pallof-or-plank finisher is ambiguous, the rationale is decent but generic about back protection, and the today object carries an extra rationale field beyond the requested shape. Season revision: The response keeps block 1 starting on 2026-10-21, returns seven week sessions with a matching today session, leaves tomorrow, nextWeek and nextBlock null, and correctly returns an empty bodyMetrics array. Atlas appears in the season goal, season rationale and block rationale, but the season was not genuinely re-planned: blocks 2 to 5 are copied from the old 200 km April plan, so the brevet-specific and taper blocks still end on 2027-04-04 while the season endDate was moved to 2027-08-31, leaving April to August uncovered with no Atlas taper, no brevet series and no Paris-Brest-Paris block. The current block's weeks are nearly identical to the supplied ones, so block 1 is barely changed, and the top-level output adds coachQuestion and modelsRemarks beyond the eight keys the revision request named. Hard gates failed: block 1 is unchanged.

TODAY PLAN

10.3/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
15.7 s	$0.00561	no	yes	200	stop

Contract 1.4/1.5 · Fidelity 1.8/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.5/2

Judgment: The session is correctly marked planned, dated 2026-10-30, indoor and non-outdoor, moderate 45-minute gym work with the planned 30 TSS and 220 W FTP, and it follows the coach's stated Week 1 changes such as rack pulls in place of floor deadlifts and two split-squat sets. The description gives concrete sets, reps, rest and a heart-rate recovery gate, with a sensible warm-up and cool-down. Weaknesses: no working loads are given for the rack pulls or split squats, the Pallof-or-plank finisher is ambiguous, the rationale is decent but generic about back protection, and the today object carries an extra rationale field beyond the requested shape.

    "title": "Gym Strength B: Elevated Hinge & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "5-minute light cardio warm-up (treadmill walk or stationary bike) followed by dynamic
hip and spine mobility (cat-cow, leg swings, hip circles). Main block: 3 sets of 8–10 reps of elevated knee-
height rack pulls or trap-bar pulls, focusing on a flat-back hip hinge and controlled eccentric lowering;
take 90–120 seconds of rest between sets until your heart rate drops below 110 bpm. 2 sets of 8–10 reps per
leg of bodyweight split squats, keeping your torso upright and descent controlled to protect your recovering
quads; rest 90 seconds. 3 sets of 10 reps of 12 kg goblet squats, maintaining steady form without pushing
into late-set quad burn; rest 90 seconds. Finish with 3 sets of 30-second Pallof presses or planks for core
anti-rotation stability. Cool down with 5 minutes of light stretching targeting hip flexors and hamstrings,
followed by your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and hip-hinge control necessary
for your fat-loss and back-pain goals during this Autumn Re-Entry block. Skipping it means losing a critical
week of safe strength adaptation, which delays your ability to maintain a comfortable cycling posture and
increases the risk of lower-back irritation during next week's extended endurance sessions.",
    "rationale": "This Gym Strength B session safely progresses your posterior chain and lower-body
stability by introducing elevated rack pulls and controlled split squats, directly addressing your lower-
back vulnerability and sit-bone discomfort while supporting the block's focus on conservative strength and
core flexibility. It builds the foundational hip mobility and muscular endurance you need to transition
smoothly into longer winter endurance sessions without triggering back irritation or excessive evening
hunger."

Google: Gemini 3.5 Flash Lite

8.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	9.7 s	$0.0180	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00550	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.8/2 · Design 1.6/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 0.6/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate enum values, and a 45-minute gym session that matches the Friday gym slot and the estimated TSS of 30. The session is specific, with rep ranges, rest periods, a heart-rate recovery cue and a mobility finish, though it adds seated cable rows and a Pallof press that go beyond the plan's listed hinge and split-squat substitutions. The rationale ties the work to back resilience and sit-bone comfort but says little about the fat-loss goal or the week's load target. Detail is limited: the pulls have no load guidance or RPE, and there is no stop condition or fallback if the lower back flares. Season revision: The candidate names Atlas throughout the season and block 2 and 3 names, and keeps block 1 starting on 2026-10-21, so the hard requirements are met. However the season end date of 2027-08-31 is kept as a PBP taper and the block list tiles without gaps, but the season block 1 summary and current block are unchanged apart from the start date and the block rationale still reads as if the earlier plan is being revised. Block 1 itself is largely unchanged from the supplied plan rather than genuinely re-planned for Atlas, and the week and today sessions show no Atlas-specific preparation beyond a label in the rationale. The outline days lack per-day TSS and power guidance is absent for the week, and the bodyMetrics entry with nulls is acceptable but adds nothing.

8.1/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	73.3 s	$0.0105	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00595	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 1.2/3 · Rationale 1.1/2 · Grounding 0.6/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym workout with the right date, enum values and no bikeWorkout, and it stays within the Week 1 spec of elevated pulls and two split-squat sets with the 90 to 120 second rest and HR below 110 cue. However, it omits the goblet squat work that the week plan and athlete feedback name as a core lift and does not give explicit loads, so the strength prescription is less specific than the athlete asked for. The description adds useful rest and HR execution cues and a stop-or-regress note is missing, while the rationale is grounded in the back and sit-bone history but does not state the calorie or fat-loss contribution of this session. Season revision: The candidate names Atlas throughout, keeps block 1 starting on 2026-10-21, and tiles the three new blocks cleanly to 2027-02-28, so the mechanical checks pass. However, the season is truncated at the Atlas date and drops Paris-Brest-Paris in August 2027, the April 200 km brevet and the brevet series, which the survey explicitly preserves. Today's session is marked completed and described as a finished treadmill run with legs feeling fresh, but no such activity exists in the input, so this is fabricated grounding. The season and block rationales also use revision-style wording about the goal changing, and the Atlas race is described with invented specifics such as distance and unsupported logistics.

Contract 1.5/1.5 · Fidelity 1.8/2 · Design 2.2/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.3/2

Judgment: The candidate correctly keeps today as a planned moderate 45-minute indoor gym workout with the right date, enum values and no bikeWorkout, and it stays within the Week 1 spec of elevated pulls and two split-squat sets with the 90 to 120 second rest and HR below 110 cue. However, it omits the goblet squat work that the week plan and athlete feedback name as a core lift and does not give explicit loads, so the strength prescription is less specific than the athlete asked for. The description adds useful rest and HR execution cues and a stop-or-regress note is missing, while the rationale is grounded in the back and sit-bone history but does not state the calorie or fat-loss contribution of this session.

SEASON REVISION

6.2/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
65.2 s	**$0.00617**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 0.6/2 · Design 1.2/3 · Rationale 1.1/2 · Grounding 0.6/2 · Detail 1.4/2

Judgment: The candidate names Atlas throughout, keeps block 1 starting on 2026-10-21, and tiles the three new blocks cleanly to 2027-02-28, so the mechanical checks pass. However, the season is truncated at the Atlas date and drops Paris-Brest-Paris in August 2027, the April 200 km brevet and the brevet series, which the survey explicitly preserves. Today's session is marked completed and described as a finished treadmill run with legs feeling fresh, but no such activity exists in the input, so this is fabricated grounding. The season and block rationales also use revision-style wording about the goal changing, and the Atlas race is described with invented specifics such as distance and unsupported logistics.

RETURNED JSON

```
{
  "season": {
    "goal": "Successfully complete the Atlas Mountain Race on February 28, 2027, with durable aerobic
endurance, efficient climbing cadence, robust fatigue resistance, and sufficient strength to handle
sustained off-pavement terrain — then maintain fitness through Paris-Brest-Paris in August 2027, supported
by consistent randonneur brevet performance starting with the 200 km in April 2027.",
    "rationale": "The season goal now reflects the athlete’s primary objective: the Atlas Mountain Race
(AMR), a ~1,200 km unsupported ultra-endurance gravel/mountain bike race with extreme elevation, variable
surfaces, and self-supported logistics. This demands exceptional aerobic durability, metabolic efficiency at
low intensities, muscular resilience for long hours in the saddle, and robust recovery capacity — all of
which must be built progressively without exceeding the athlete’s documented 4-month sustainable training
window. The plan therefore prioritizes consistency over peak intensity early on, embeds frequent recovery
checks, avoids stacking fatigue (e.g., no concurrent high-load strength + hard cycling), and uses skiing and
easy running as low-impact cross-training to preserve aerobic base while reducing repetitive strain. The 200
km brevet in April serves as the first key benchmark of pacing, fueling, and equipment readiness; PBP in
August is the longer-term durability test. All blocks are calibrated to avoid burnout: AMR-specific
adaptations (e.g., multi-hour gravel endurance, sleep-deprived pacing, gear load management) begin only
after solid aerobic and strength foundations are confirmed in late December/early January.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build durable low-intensity aerobic capacity, neuromuscular efficiency at cadence ≥85 rpm, and
full-body strength resilience — all without accumulating residual fatigue.",
    "rationale": "This block remains the critical foundation for AMR: success hinges not on peak power but
on sustaining 60–75% FTP for 12+ hours per day across 5–7 days, with minimal recovery between efforts. The
athlete's recent week (19–25 Oct) delivered ~587 TSS — far higher than intended due to the 3-hour Zwift race
and pole vaulting — confirming their vulnerability to fatigue stacking. Therefore, Weeks 2–7 prioritize
*consistency over volume*: every aerobic session is capped at HR ≤140 bpm (Z2), cadence ≥85 rpm from minute
one, and no tempo or threshold work until Week 3 — and only if Week 2 shows clean execution (no HR drift,
stable cadence, no leg heaviness). Strength is kept light, bilateral, and logged separately to prevent
interference. FTP remains fixed at 225 W through this block because no threshold stimulus has been completed
under controlled conditions; gains will emerge gradually only when fatigue is fully managed. The 7-week
duration respects the athlete's 4-month ceiling by front-loading adaptation and building in a planned deload
(Week 4) before volume peaks in Weeks 5–6.",

8.1/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	122.1 s	$0.0145	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00580	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.9/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.4/2 · Detail 0.9/2

Combined judgment: Today plan: The candidate returns the exact today object for 2026-10-30 with planned status, workout type, moderate intensity, 45 minutes, indoor flag and a 220 W FTP that match the plan, and it correctly keeps the session off the bike. The session matches the plan's Gym Strength B content (elevated pulls and two split-squat sets), but it omits the 3 squat-related details the athlete wanted (the plan calls for specific exercises, sets and reps) and drops the goblet squat and glute work, so the prescription is thinner than the athlete's requested detail. Rationale is specific to the hinge and back goals, though it does not mention the heart-rate-below-110 bpm rest cue in the rationale, and the split squat load and pull load are left vague without a concrete starting load or RPE guidance. Season revision: The response names Atlas in the season goal, block 3 focus and several rationales, and it keeps block 1 starting on 2026-10-21 with the tiling intact. However, block 1 is barely changed: its name, focus and all seven weeks are the same as before, and only one sentence about the new goal was appended to its rationale, which also contains meta wording such as remain unchanged. The season is not truly re-planned around Atlas: block 3 simply ends on the Atlas date with no taper before it, the brevet blocks still follow it, the season end stays at 2027-04-04, and Paris-Brest-Paris in August is explicitly placed outside scope despite being a stated goal. The current week and today's session are coherent and grounded in the supplied activities, forecast and athlete constraints, but they are carried over largely unchanged. Hard gates failed: block 1 is unchanged.

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change. With the athlete's expanded goal (Atlas Mountain Race Feb 28,
brevet April) and max 4-month disciplined training window, this base phase is the critical foundation before
the build blocks.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race.",

qwen/qwen3.6-flash

8.1/12.5

Qwen: Qwen3.6 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	88.8 s	$0.0188	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00607	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.2/2 · Grounding 1.4/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate returns clean JSON with the correct date, planned status (nothing recorded today), 45-minute moderate workout, indoor flag, null bikeWorkout and the 220 W FTP and 30 TSS from the plan, so fidelity is strong. The session follows the plan's Gym Strength B content (elevated pulls, two split-squat sets, core work) and uses the coach's 90–120 second rest and under-110 bpm cues. The main weakness is that the elevated pulls and split squats have no rep counts or loads, even though the athlete explicitly asked for exact exercises, sets and reps for strength work. The rationale is specific to the back, hip hinge and sit-bone goals, though its appetite-related claims are somewhat speculative. Season revision: The response keeps the required shape, block 1 starts on 2026-10-21, today matches the seven-session week, and the block rationale and season goal name Atlas. However the season is not properly re-planned: the season endDate is moved to 2027-08-31 but the supplied blocks still end on 2027-04-04, so the blocks do not tile to the season end, and no Paris-Brest-Paris or post-April brevet block is added. The block name, focus and weeks are unchanged apart from rationale, so the Atlas taper and build toward 28 February 2027 is not actually designed into the blocks. The current week and today's session are coherent and grounded in the supplied activities, with bodyMetrics correctly empty, but today's session is essentially the supplied one with little new detail. Hard gates failed: block 1 is unchanged.

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Complete a 45-minute moderate gym strength session focused on rebuilding your posterior
chain safely. Begin with a 5-minute dynamic warm-up, then perform three sets of elevated knee-height rack or
trap-bar pulls, taking full 90–120 seconds of rest between sets so your heart rate drops below 110 bpm
before each lift. Follow with two controlled bodyweight split-squat sets, prioritizing strict form over
volume to protect your recovering quads. Conclude with three sets of Pallof presses (3x10 per side) and a
30-second plank, finishing immediately with your unrecorded 8-minute hip and spine mobility circuit. This
structured loading reinforces the flat-back hip hinge mechanics essential for pain-free climbing and long-
distance saddle comfort, while the controlled rest intervals keep your cardiovascular stress in check to
prevent post-session hunger spikes.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and safe hip-hinge mechanics
required to maintain a stable, aerodynamic cycling posture without lower-back strain or sit-bone discomfort.
It also preserves lean muscle mass to sustain your resting metabolic rate for steady fat loss. If you skip
it, you lose critical structural conditioning for your autumn base, delay recovery of your lumbar stability,
and reduce the muscular leverage that keeps your evening hunger manageable through efficient energy
partitioning."
  }
}
```

    "goal": "Complete the Atlas Mountain Race (February 28, 2027), followed by Paris-Brest-Paris (August
2027), with comfortable completion of a randonneur brevet series including a 200 km event in April 2027.
Maintain disciplined training within 4-month cycles to prevent burnout and sustain long-term progress.",
    "rationale": "The season extends through August 2027 to accommodate the Atlas Mountain Race, Paris-
Brest-Paris, and the intervening brevet series. Because you historically maintain disciplined training for a
maximum of four months, the long-term structure intentionally builds in conservative progression, strict
fatigue management, and scheduled deload phases to preserve freshness across the entire campaign. The
initial block prioritizes aerobic durability, efficient cadence above 85 rpm, and low-load strength while
avoiding unnecessary strain. Recent training shows strong responses to controlled indoor riding and steady
hiking, but also highlights the need to manage sudden fatigue spikes from unplanned high-intensity efforts.
By anchoring the early phase in repeatable, sub-threshold volume and careful recovery, you build the
physiological resilience required for multi-day mountain racing and ultra-endurance brevets without hitting
the four-month wall prematurely.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block establishes the aerobic engine and pedaling efficiency required for the Atlas
Mountain Race and subsequent ultra-endurance events. Given your four-month training limit, the block
deliberately avoids aggressive volume jumps or early threshold work, instead focusing on consistent, well-
controlled aerobic sessions and light strength to build tissue tolerance without systemic fatigue. Week 1's
actual load (~587 TSS) exceeded the intended recovery target due to an unplanned three-hour race and
additional strength/pole-vaulting work, which reinforces keeping Week 2 conservative. Strict heart-rate
ceilings and cadence targets from the first minute of every ride ensure you develop sustainable pacing
habits. The 225 W FTP baseline is retained because no fresh threshold test or sustained power evidence
justifies a change, and maintaining this baseline while managing fatigue sets you up for gradual gains in

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and sustains multi-day mountain
racing.",

Thinking Machines: Inkling Small

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	40.0 s	$0.0286	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00563	anthropic/claude-haiku-5.5

Mentions Atlas **pass**

Block 1 changed or Atlas question asked **pass**

Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate matches the required JSON shape, the 2026-10-30 date, the planned moderate 45-minute gym workout, the indoor flags and the 220 W FTP. The exercise selection is sensible and grounded in the athlete's history, including the two-set split squat cap, the lat pulldown progression from 30 to 50 kg, the elevated pulls replacing floor deadlifts and the heart-rate cap. Weaknesses: the elevated pull load is not given as a working weight or a starting-load assumption, there are no explicit stop conditions for back pain, and the rationale stays fairly generic on fat loss and the week's target load. Season revision: The response returns the eight required keys and seven sessions, and block 1 starts on 2026-10-21 as required. However, the season and block plans barely change: the season blocks are essentially the old ones with Atlas only mentioned in the goal and a vague taper note, and the Atlas race itself is not placed in the calendar (the taper block still runs to 2027-04-04, and the 200 km brevet is still the only named target). The block rationale and week focus never name Atlas, which is a weak sign of Atlas preparation, and the candidate asks a coachQuestion about a post-Atlas break instead of building the design in. Week 2 also reports 230 TSS actual where the input gives no such figure, and the week text keeps some meta-commentary about what changed, though the day-level detail and grounding in the activities are solid.

TODAY PLAN

{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B — Elevated Hinge & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Gym Strength B protects your lower back and builds single-leg stability ahead of spring tarmac riding and long rides. Warm up 8 minutes with hip/spine mobility, then complete: (1) Elevated knee-height rack or trap-bar pulls — 3 sets of 6–8 reps with a flat-back hip hinge, resting 90–120 s between sets until heart rate drops below 110 bpm; (2) Bodyweight split squats — 2 controlled sets of 10 reps per leg (capped at two sets to protect your quads); (3) Glute bridges — 3×12; (4) Lat pulldowns — 3 sets (12 reps at 30 kg, 10 at 40 kg, 10 at 50 kg); (5) Pallof press — 3×10 per side; (6) Plank — 3×30–45 s. Finish with your unrecorded 8-minute mobility circuit. Keep effort moderate (HR ~102–142 bpm) so you stay in the fat-oxidation zone without triggering evening hunger, and never load floor deadlifts—elevated pulls replace them to keep your back safe.",
    "optional": false,
    "optionalRationale": "This session is not optional: it delivers the second weekly gym stimulus for safe posterior-chain hinge mechanics and split-squat balance. If you skip it, you delay the back-protection and leg-stability adaptations you need before weekend hikes and spring road riding, increasing risk of quad burn and back strain when volume rises."

qwen/qwen3.5-plus-20260420

8.0/12.5

Qwen: Qwen3.5 Plus 2026-04-20

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	133.7 s	$0.0376	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00607	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.1/2 · Grounding 1.4/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP and TSS 30, and matches the Gym Strength B session in the current plan. The exercise list is sensible and specific, with sets, reps, rest and a heart-rate cue, but it drops the goblet squat sets that the week plan explicitly keeps at three steady sets, and the knee-height pull load of 30-40 kg is an unstated assumption. The rationale is grounded in the back and saddle goals, though it lacks any stop condition, pain fallback or progression guidance for the lifts. Season revision: The season goal and season rationale name the Atlas Mountain Race, but the season blocks are essentially the old 200 km brevet shape: the final spring blocks still taper toward a 4 April brevet, Atlas on 28 February falls at the end of a build block with no race taper, and Paris-Brest-Paris in August 2027 is absent from the season entirely. The current block keeps the same name, focus, dates and all seven week targets, and its rationale never mentions Atlas, so block 1 is not meaningfully changed for the new goal. The current week and today's run are coherent, grounded in the logged sessions, correctly indoors given the forecast, and respect the heart-rate ceiling, but they are carried over almost verbatim rather than redesigned around the new goal. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Today's Gym Strength B focuses on safely rebuilding your hip hinge and core stability while protecting your lower back. Perform 3 sets of 10 reps of light elevated rack or trap-bar pulls (knee height, ~30-40 kg), focusing on a flat back and controlled tempo. Follow with 2 sets of 10 reps per leg of bodyweight split squats, keeping the torso upright to minimize quad burn. Complete 3 sets of 12 reps of glute bridges, 3 sets of 10 reps per side of Pallof presses, and 3 x 30-second planks. Rest 90-120 seconds between sets to let your heart rate drop below 110 bpm. Finish with your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "Skipping this session would delay the neuromuscular adaptation of your hip hinge and core anti-rotation, which are critical for maintaining a pain-free, aerodynamic cycling posture during your upcoming brevet series. Completing it now locks in the structural resilience you need to handle higher training loads in the Early Winter block.",
    "rationale": "This session anchors your Week 1 multimodal foundation by introducing the second gym day, specifically targeting the posterior chain and core stability needed to eliminate saddle discomfort and prevent back pain on long rides. The elevated hinge progression and controlled split squats safely rebuild your hip mechanics without overloading your recovering quads or lower back, keeping the stimulus strictly in the moderate zone to support steady fat loss without triggering evening hunger spikes."

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, followed by Paris-Brest-Paris in August 2027, with a 200 km randonneur brevet in April 2027 as a stepping stone. Train in disciplined 4-month cycles to maintain progress without burnout.",
    "rationale": "The season is structured around your new goals: the Atlas Mountain Race in late February, a 200 km brevet in April, and Paris-Brest-Paris in August. Because you can only sustain disciplined training for up to four months at a time, the plan is divided into focused blocks that peak efficiently and then transition to maintenance or cross-training. The current aerobic base block builds the durable engine you need for long days in the saddle, while the winter block preserves cycling fitness through skiing and running. The spring blocks convert that base into brevet-specific pacing and climbing endurance, followed by a sharp taper. This shape respects your four-month window by front-loading volume and specificity, then shifting to race-specific execution and recovery.",

upstage/solar-pro4

Upstage: Solar Pro 4

7.9/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	46.5 s	$0.00672	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00617	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 0.8/2 · Grounding 0.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, contains only the requested today object, and matches the planned Friday gym session on 2026-10-30 in date, type, intensity, 45-minute duration, indoor flag, 30 TSS and 220 W FTP. The exercise selection respects the back constraints from the block plan (elevated pulls, capped split squats, glute bridges, Pallof work) and gives concrete sets, reps and rest, with a sensible stop condition for the lower back. Weaknesses are that loads and RPE are not specified for the pulls and Pallof press, the sub-110 bpm pre-set heart-rate instruction is loosely tied to rest timing, and the plank progression is not clearly anchored to prior feedback, although the rationale is specific to the athlete's back and fat-loss goals. Season revision: The response mentions Atlas in the season goal and rationale, keeps block 1 starting on 2026-10-21, and keeps the seven-session week and the null tomorrow, nextWeek and nextBlock fields. However, the block 1 changes are essentially cosmetic: the name, focus, weeks and load targets are unchanged, and the block rationale is meta-commentary about a survey update. The season is not really re-planned for the new goal: the season still ends on 2027-04-04, so Paris-Brest-Paris in August 2027 is absent, and no block names or focuses on Atlas preparation. Today's session is also wrongly marked completed with an invented description of the run's heart rate and cadence, which the input does not support. Hard gates failed: block 1 is unchanged.

{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Elevated Hinge & Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session focused on safe posterior-chain and core work to support your fat-loss and
back-health goals. Warm up with 5 minutes of easy cycling or brisk walking, then perform: elevated knee-
height rack or trap-bar pulls (3 sets of 8 reps, using a load that lets you keep a flat back and stop before
your lower back rounds), bodyweight split squats (2 sets of 10 reps per leg, controlled and pain-free),
glute bridges (3 sets of 12 reps, steady and moderate), Pallof press (3 sets of 10 reps per side, anti-
rotation focus), and a 30-second plank (2 sets, only if your back feels stable). Take 90–120 seconds of rest
between sets so your heart rate drops below 110 bpm before each set. Finish with your daily 8-minute hip and
spine mobility circuit. Because today is rainy and cool, this indoor gym session keeps your effort in a
controlled moderate zone without adding outdoor exposure.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge mechanics and core anti-rotation strength
that directly reduce the back ache you feel on long climbs and during crouching work, while the controlled
moderate effort supports steady fat loss without spiking evening hunger. Skipping it today would leave your
posterior chain and core under-loaded for the week, slowing the posture and back-durability gains that let
you sit more comfortably on very long rides and eventually hold a more aerodynamic position."

    "rationale": "This week closes the conservative rebuild before Week 3's first controlled threshold
stimulus. Tuesday and Friday strength sessions, Wednesday's short rowing and easy run, a missed Thursday
trainer ride, and Saturday's 2 h 05 min hike at 114 bpm average delivered the aerobic purpose without the
cadence-specific cycling. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week ends with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3 fresh. The 30-minute run keeps running-specific
durability alive at minimal cost, and the week's remaining priority — cadence above 85 rpm from the first
minute of every ride — carries into next week, because repeatable efficiency at low intensity is what
carries you through 200 km in April.",

Google: Gemini 3.1 Flash Lite

7.9/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	9.6 s	$0.0119	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00584	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.0/2 · Design 0.9/3 · Rationale 1.0/2 · Grounding 1.2/2 · Detail 0.9/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned gym session dated 2026-10-30 with the right duration, moderate intensity, indoor flag and null bikeWorkout, and it follows the athlete's preference for specific sets and reps. The exercise list is grounded in the plan and recent feedback, with rest guidance to keep heart rate under 110 bpm and the elevated hinge in place of floor deadlifts. However, the description lists more items than the 45-minute plan names, omits any load guidance or stop conditions for the back, and the rationale is somewhat generic about the loss from skipping rather than tied to the Week 1 targets. Season revision: The response names Atlas in the season goal and block rationale, keeps block 1 starting on 2026-10-21, leaves earlier blocks alone, and keeps tomorrow, nextWeek and nextBlock null. The season redesign is weak, though: blocks 2 to 4 are essentially unchanged, there is no Atlas-specific taper or recovery after 28 February, the 4-month training ceiling is ignored by a plan running to August, and the final block is relabelled as a 23-week taper that covers the summer PBP build. Block 1 week targetLoad fields were reduced to generic words, and the season and block rationales read as meta-commentary about the update. Completed-day session descriptions were rewritten rather than kept as supplied, and the Thursday session is typed as a workout while titled Rest.

TODAY PLAN

nousresearch/hermes-3-llama-3.1-405b

7.9/12.5

Nous: Hermes 3 405B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	159.8 s	$0.0302	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00621	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.0/2 · Design 1.4/3 · Rationale 0.8/2 · Grounding 1.5/2 · Detail 0.8/2

Combined judgment: Today plan: The JSON contract and fidelity are sound: the date, planned status, 45-minute moderate gym session, outdoor false, FTP 220 W and TSS 30 all match the week plan. The main weakness is design and detail: the description names elevated pulls and two split-squat sets but gives no exercise list, sets, reps, load guidance or RPE, even though the athlete explicitly asked for very specific strength workouts. The rationale is reasonably tied to the back and posture goals, but the claim about priming fat-oxidizing enzymes is an overreach, and the mobility circuit and heart-rate rest cue are the most useful grounded details. Season revision: The season is refreshed with Atlas Mountain Race in the build, the 200 km brevet and Paris-Brest-Paris retained, block 1 starts on 2026-10-21, and tomorrow, nextWeek and nextBlock stay null. However, block 1 is barely changed: only its rationale was edited, while its name, focus, weeks and the current week and today session still never mention Atlas, which is the weak point. The season has no Atlas-specific taper before 28 February, and the block rationale contains meta wording such as remain unchanged and now aligned. The bodyMetrics array includes a null-valued entry where an empty array was the correct output. Hard gates failed: block 1 is unchanged.

    "rationale": "The block name, focus, and dates remain unchanged, but the goal is now the Atlas Mountain
Race in February 2027, with a 200 km brevet in April and Paris-Brest-Paris in August as stepping stones. The
4-month training progression aligns with the athlete's historical ability to maintain disciplined training.
Week 1 is now aligned with the actual 19-25 October week and its much higher realized load. The three-hour
race, additional activity, strength and pole-vaulting session, controlled ride, and long hike produced
roughly 587 TSS, so this was not the low-stress recovery week originally targeted. The higher load supports
a conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

HARD GATES	JUDGE COST	JUDGED
pass	$0.00644	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 0.8/2 · Detail 1.0/2

Combined judgment: Today plan: The session matches today's planned moderate 45-minute indoor gym workout, correctly marked planned and non-outdoor, and the exercise list (knee-height pulls, two bodyweight split squat sets, rows, Pallof, planks) follows the block's hinge-progression and back-safety intent with explicit sets, reps, and a rest cue. The main weaknesses are the contract: the response adds a nested week object with seven sessions inside today rather than returning only the requested today object, and the prescription gives no load guidance for the pulls or rows, no RPE target, and no fallback if the back irritates. The rationale is specific to posterior-chain durability and the cycling posture goal, though the grounding does not reference the athlete's recorded quad-burn and goblet-squat feedback that shapes this week. Season revision: The JSON is valid and keeps the required top-level structure, seven week sessions and a matching today session, and block 1 still starts on 2026-10-21. However, the season was not re-planned for the Atlas Mountain Race on 28 February 2027 or for Paris-Brest-Paris in August 2027: the season still ends on 2027-04-04 with April brevet taper blocks, and no block name, focus or week names Atlas. The current block weeks are unchanged from the supplied plan, so the block is barely revised. Today's session was marked completed with an invented note about a treadmill run the input never recorded, and some session TSS values were changed without basis.

SEASON REVISION

5.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
11.5 s	**$0.0204**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 0.8/2 · Detail 1.0/2

Judgment: The JSON is valid and keeps the required top-level structure, seven week sessions and a matching today session, and block 1 still starts on 2026-10-21. However, the season was not re-planned for the Atlas Mountain Race on 28 February 2027 or for Paris-Brest-Paris in August 2027: the season still ends on 2027-04-04 with April brevet taper blocks, and no block name, focus or week names Atlas. The current block weeks are unchanged from the supplied plan, so the block is barely revised. Today's session was marked completed with an invented note about a treadmill run the input never recorded, and some session TSS values were changed without basis.

nousresearch/hermes-4-405b

7.8/12.5

Nous: Hermes 4 405B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	173.7 s	$0.0498	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00617	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.5/2 · Design 0.8/3 · Rationale 0.8/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, the date, status, workout type, moderate intensity, 45 minutes, indoor flag, FTP and TSS all match the plan's Friday gym session, and bikeWorkout is correctly null. The exercise list (elevated pulls, two split-squat sets, planks, stretching) follows the block's hinge and split-squat progression with sensible rep ranges and rest, though it drops the goblet squats the week plan calls for and gives no load progression or stop condition. The rationale ties the session to back protection and cycling posture, but it does not state what fat-loss or hinge progress is lost by skipping, and the detail is thinner than it could be. Season revision: The response mentions Atlas in the season goal and in later block names, and it keeps block 1 starting on 2026-10-21. However, the current block is essentially the supplied block with identical name, focus and rationale text, so block 1 is not genuinely changed, and Atlas does not appear in its plan. The season also has a chronological error: the Atlas Mountain Race Preparation block runs from March 1 to March 21, 2027, after the February 28 race, and Paris-Brest-Paris in August 2027 is dropped entirely, with the season still ending on 2027-04-04. The response also returns two extra keys (coachQuestion and modelsRemarks) beyond the eight requested, and the season rationale reads as commentary on how the plan was changed. Hard gates failed: block 1 is unchanged.

  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, then a 200 km brevet in early April 2027,
and Paris-Brest-Paris in August 2027, with steady pacing, durable aerobic endurance, efficient cadence, and
enough strength to handle hilly terrain.",
    "rationale": "The season now prioritizes the Atlas Mountain Race on 28 February 2027 as the first major
goal, followed by the 200 km brevet in early April and Paris-Brest-Paris in August. The compressed timeline
to February means the aerobic base must be built efficiently, with a focus on repeatable low-intensity
volume, efficient cadence, and strength to handle varied terrain. The first block's aerobic-first
progression remains appropriate, but the winter block will now emphasize cycling-specific endurance and
climbing efficiency rather than cross-training, and the build phase will progress sustained power and long
endurance riding earlier. The final two weeks reduce volume by approximately 40-50% while retaining brief
intensity for race readiness.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

qwen/qwen3-14b

Qwen: Qwen3 14B

7.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	90.0 s	$0.00426	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00598	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.8/2 · Design 0.7/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session with the right date, FTP, TSS and outdoor flags, and it uses the elevated rack or trap-bar pull and two split-squat sets from the plan. The description is thin for a strength session: it gives load as a percent of 1RM without noting that the athlete's 1RM is unknown, and it omits the goblet squat work, the core set details, and any stop condition or progression rule. The rationale names the back-protection and PBP links but does not spell out a concrete loss from skipping beyond general back-injury risk. Season revision: The season goal names the Atlas Mountain Race, and block 1 correctly starts on 2026-10-21 with the null tomorrow, nextWeek and nextBlock kept. However, the season is essentially the old shape: the blocks still end on 2027-04-04, there is no Atlas-specific build or taper before 28 February 2027, and Paris-Brest-Paris in August 2027 is absent from the season. The block weeks are copied unchanged and no block focus or name mentions Atlas, so block 1 is barely changed. Several rationales are meta-commentary about the season remaining valid or the block being unchanged but realigned, and the Thursday session is typed as a workout while marked rest and missed, which is an internal inconsistency.

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week delivered its aerobic purpose without the cadence-specific cycling: Tuesday and
Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

SpaceXAI: Grok 4.20

7.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	22.1 s	$0.0421	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00587	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.0/2 · Grounding 0.9/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned 45-minute moderate gym session on 2026-10-30 with status planned, outdoor false and the correct FTP, and it reflects the plan's Gym Strength B focus on knee-height rack pulls and two split-squat sets. It has good exercise specificity with sets and reps and HR-recovery guidance, but it drifts from the coach's stated 2-set split squat and 3-set goblet squat progression by adding a 3-round structure that conflicts with the 2-set cap, and the lat pulldown and planks are somewhat loosely prescribed. The rationale ties the session to back pain and saddle discomfort, but does not mention the fat-loss goal or the weekly load target, and the mobility circuit is listed as part of the gym session rather than as the separate unrecorded daily habit. Season revision: The response keeps the required eight top-level keys and starts block 1 on 2026-10-21, and it names Atlas in the season goal. However, the season blocks are not re-planned: they still end on 2027-04-04 with a 200 km brevet taper, so the Atlas race on 28 February 2027 and Paris-Brest-Paris in August 2027 are not built into the timeline, and the season rationale claims a full-year stretch that the dates do not show. The current block name, focus and rationale never mention Atlas, and the block is essentially unchanged from the supplied version. The week also rewrites completed past sessions, for example changing Strength A to 45 minutes and the Saturday hike to a generic ride title at 125 minutes, and it gives the missed Thursday session a non-null estimatedFtpWatts of 225 even though past sessions should have that field null. Hard gates failed: block 1 is unchanged.

```
{
  "season": {
    "goal": "Build durable aerobic endurance, efficient cadence above 85 rpm, and consistent low-load
strength to comfortably complete the April 200 km brevet, while establishing a sustainable training rhythm
you can maintain beyond 4 months toward the Atlas Mountain Race in February 2027 and Paris-Brest-Paris in
August 2027.",
    "rationale": "Your updated goal now explicitly includes the Atlas Mountain Race on 28 February 2027 and
Paris-Brest-Paris in August 2027, plus the need to complete a randonneur brevet series starting with the 200
km in April. This requires a longer, more sustainable aerobic foundation than a single-event plan. The
season therefore retains its aerobic-first structure but stretches the progression across a full year, with
conservative 7-week blocks that respect your history of maintaining disciplined training for only 3–4 months
at a time. The current Aerobic Base and Strength Foundation block remains the correct starting point because
your recent sessions show good aerobic control (HR consistently under 140 bpm) but inconsistent cadence and
occasional high-fatigue spikes from races and mixed activities. This block therefore prioritises repeatable
easy volume, cadence habit formation, and strength consistency before any threshold work, giving you the
durable base needed for both the April brevet and the much longer events that follow.",

qwen/qwen3-vl-30b-a3b-thinking

7.6/12.5

Qwen: Qwen3 VL 30B A3B Thinking

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	D	A	304.4 s	$0.0193	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00635	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.5/2 · Design 0.9/3 · Rationale 1.1/2 · Grounding 1.1/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, workout and moderate fields, 45 minutes, indoor flags and 220 W FTP all match the plan. The session is thin and partly inconsistent: it prescribes three sets of split squats when the week plan caps them at two, it gives only two exercises for a 45-minute gym slot, and it asks for 15-20 seconds of rest between pulls while also asking for 90-120 seconds of rest to hold heart rate down. The rationale and the back and posture grounding are reasonable but somewhat generic, and no load guidance or RPE target is given. Season revision: The response names Atlas in the season goal, season rationale and tomorrow rationale, and block 1 keeps its 2026-10-21 start, but the season is essentially the supplied one with the same blocks and an end date of 2027-04-04, so Paris-Brest-Paris in August 2027 is absent and the Atlas race in February is not the taper target. The block name, focus and week structure are unchanged, so the current block is barely revised to accommodate Atlas. The response also fills tomorrow with an invented 110 percent FTP threshold session even though the request said to keep tomorrow as supplied, which is a clear fidelity breach. Past sessions carry estimatedFtpWatts of 0 rather than null, and the missed Thursday session is typed as a workout with rest intensity, which is a contract inconsistency. Today's session and the week's Sunday run are reasonable, consistent and athlete-grounded, with dry-weather indoor placement and heart-rate ceilings respected.

TODAY PLAN

9.2/12.5

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "Focus on safe hip-hinge mechanics with elevated knee-height rack or trap-bar pulls (3
sets of 10 reps, 15-20 sec rest between sets) and two controlled bodyweight split squats (3 sets of 10 reps
per leg). Prioritize flat-back form to protect your lower back while rebuilding posterior-chain resilience.
Keep heart rate below 130 bpm by taking full 90-120 seconds of rest between sets. This session directly
addresses your cycling posture and back pain by strengthening the glutes and hamstrings without overloading
the quads, which is critical for maintaining a pain-free position during long rides and preventing saddle
discomfort.",
    "optional": false,
    "optionalRationale": "Skipping this session would compromise your ability to safely progress to higher-
intensity cycling and running later in the block. Without reinforcing the elevated hinge mechanics, you risk
re-injuring your lower back during future strength work or endurance sessions, directly undermining your
fat-loss and core-strength goals. The moderate intensity ensures you build resilience without triggering
excessive fatigue or hunger spikes."

7.6/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	B	240.0 s	$0.0606	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00570	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.0/3 · Rationale 0.6/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON contract is clean and the session matches the planned Friday gym day with correct date, status, indoor flag, duration, and TSS. The description gives concrete sets, reps, and a warm-up, cool-down, and core circuit, but it omits the required heart-rate target for non-cycling work and never mentions the 90-120 second rest or the lower-back stop cues the coach asked for. The optionalRationale is empty and the main rationale is missing entirely, so the reason the session matters toward the fat-loss and hinge-strength goal is not explained. Season revision: The output is valid, keeps block 1 starting on 2026-10-21, names Atlas in the season goal and block rationale, and leaves tomorrow, nextWeek and nextBlock null as required. The season is largely the old one with the same five blocks and dates, so the Atlas race on 28 February 2027 gets no dedicated peak or taper, Paris-Brest-Paris is only mentioned in the goal text, and the roughly six-month span ignores the athlete's stated four-month training ceiling. The block itself is barely changed (same name, focus and week structure, with only a rationale rewrite and small FTP edits), and past sessions in the current week carry an estimatedFtpWatts value of 225 where the instructions require null. Week and today content is coherent and grounded in the supplied activities, forecast and athlete constraints, with a reasonable indoor run and a sensible optional flag.

Qwen: Qwen3 Coder Next

7.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	53.1 s	$0.00669	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00561	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 1.0/2 · Grounding 1.0/2 · Detail 0.7/2

Combined judgment: Today plan: The candidate matches the planned Friday gym session on date, status, type, intensity, duration, indoor flag, TSS and FTP, and it gives a concrete, well-sequenced exercise list with rest guidance and a mobility finish. Its main weakness is the prescription of 30 to 40 kg for Pallof presses, which is implausible and unsafe for an athlete whose goblet squat is 12 kg and whose glute bridges were described as easy, and the 20 kg loaded glute bridge is also an invented load. The rationale ties the session to lower-back protection, lean mass and posture on long rides, but it is somewhat generic and gives no RPE or progression rule to guide load choices. Season revision: The candidate names Atlas in the season goal and rationale but the block 1 name and focus stay unchanged and Atlas never appears in the block plan, week or today rationale, so the required block change for the new goal is missing. Block 1 correctly starts on 2026-10-21 and the earlier blocks were preserved, but the season end date was moved to 2027-08-31 while the season blocks still stop at 2027-04-04, leaving the Paris-Brest-Paris period untiled and breaking the season tiling rule. Block 1 week 1 startDate is also still 2026-10-19 rather than matching the new block start, and the week rationale and today rationale still describe the old brevet-focused plan without any Atlas preparation. Hard gates failed: block 1 is unchanged.

```
    "bikeWorkout": null,
    "description": "Second gym strength session of the week, focusing on safe posterior-chain reactivation
and core stability. Perform elevated knee-height rack pulls (or trap-bar pulls) for 3 sets of 8–10 reps at a
weight that allows full flat-back hip hinge control, followed by two controlled bodyweight split-squat sets
of 8–10 reps per leg. Include 3 sets of 12 kg goblet squats (hold at 12 kg if third-set quad burn remains
mild), 3 sets of loaded glute bridges (20 kg), 3 sets of Pallof press (30–40 kg per side), and 3 sets of 30–
45 second planks. Take full 90–120 seconds of rest between sets so your heart rate drops below 110 bpm
before each lift, and finish with your 8-minute daily hip/spine mobility circuit.",
    "optional": false,
    "optionalRationale": "Skipping this session would delay your safe return to hip-hinge mechanics and
posterior-chain strength, increasing the risk of lower-back strain during future cycling or hiking—
especially on long climbs where your back already fatigues. This session directly supports your fat-loss
goal by building lean muscle mass (which elevates resting metabolism) and your cycling goal by reinforcing
the core stability needed to maintain a comfortable, upright posture without excessive sit-bone pressure on
long rides."

Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 1.0/2 · Grounding 1.0/2 · Detail 0.7/2

Judgment: The candidate names Atlas in the season goal and rationale but the block 1 name and focus stay unchanged and Atlas never appears in the block plan, week or today rationale, so the required block change for the new goal is missing. Block 1 correctly starts on 2026-10-21 and the earlier blocks were preserved, but the season end date was moved to 2027-08-31 while the season blocks still stop at 2027-04-04, leaving the Paris-Brest-Paris period untiled and breaking the season tiling rule. Block 1 week 1 startDate is also still 2026-10-19 rather than matching the new block start, and the week rationale and today rationale still describe the old brevet-focused plan without any Atlas preparation.

```
{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April. Whenever I
have been doing disciplined training, I have only been able to do so and maintain progress for a maximum of
4 months, usually less.",
    "rationale": "The season now explicitly prioritizes the Atlas Mountain Race (AMR) on February 28, 2027
as the primary goal, with Paris-Brest-Paris (PBP) in August 2027 as the secondary long-distance objective.
The 200 km brevet in April serves as a key intermediate benchmark and preparation step. The athlete's
history shows they can maintain disciplined training for only about 4 months at a time, so the plan is
structured in focused 4-month blocks with built-in recovery and cross-training to sustain motivation and
avoid burnout. The current block (Aerobic Base and Strength Foundation) builds the durable aerobic engine
and movement efficiency required for AMR's demanding terrain and duration, while preserving flexibility for
skiing and other winter activities to maintain engagement.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block remains unchanged in structure and dates (2026-10-21 to 2026-12-06), but Week
1's actual load (approximately 587 TSS) exceeded the intended recovery target due to the three-hour Zwift
race and additional pole-vaulting activity. This confirms the need for conservative progression: strict
heart-rate control (≤140 bpm), cadence above 85 rpm from the first minute, and separate logging of strength
work to avoid stacking fatigue. Week 2 has delivered on this with controlled aerobic work and no missed
sessions, supporting a cautious increase in volume for Week 3 while preserving the 4-month sustainability
goal by avoiding early burnout. The 225 W FTP baseline is retained as no fresh threshold test or sustained
power evidence justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this session would lose the running-specific durability that supports
your cycling base through the winter, but the cost is small because the week's hiking and rowing already
provided sufficient aerobic stimulus; however, maintaining the weekly rhythm of movement helps prevent the
4-month burnout pattern you've identified, so it's worth doing.",

7.5/12.5

Qwen: Qwen3 VL 30B A3B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	239.1 s	$0.00698	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00624	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.0/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session with the right date, type, intensity and estimated FTP, and it carries forward the plan's elevated pulls, split squats, glute bridges and Pallof work with a safe hinge progression. However, it drops the planned weight and set structure in places: the plan caps split squats at 2 sets and the athlete's 3 goblet squat sets and tight quads are not addressed, and the pull and bridge loads are left vague. The rationale is reasonably specific to hinge control and back safety but does not state the concrete loss in fat-loss or hip-mobility terms, and the 8-minute mobility circuit that the athlete is supposed to do daily is not mentioned in the session. Season revision: The response names Atlas in the season goal and season rationale and keeps block 1 starting on 2026-10-21, but the season block list is copied unchanged, so no Atlas build, Atlas peak or Paris-Brest-Paris phase appears, and the Atlas race on 28 February falls inside the untouched block 3 with no taper or preparation. Block 1 is effectively unchanged from the supplied version, and its rationale is meta commentary that says the block remains unchanged but Week 1 is now aligned. Tomorrow was supplied as null and should have stayed null, yet the response fills it with a detailed indoor ride, which breaks the fidelity instruction. The top-level object also carries coachQuestion and modelsRemarks beyond the eight keys the request lists, while the day-level detail, TSS and FTP values are otherwise consistent with the supplied data. Hard gates failed: block 1 is unchanged.

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

#145

qwen/qwen3.5-9b

7.4/12.5

Qwen: Qwen3.5-9B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	47.2 s	$0.00061	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00638	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 1.1/2 · Grounding 0.9/2 · Detail 0.8/2

Combined judgment: Today plan: The candidate matches the required today object: the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 220 W FTP, 30 TSS and null bikeWorkout all agree with the current plan for the gym session. The description names the elevated rack or trap-bar pull and two bodyweight split-squat sets and gives a sensible 90 to 120 second rest with a heart-rate check, but it gives no sets, reps, loads or exercises for the rest of the 45-minute session, despite the athlete asking for very specific strength workouts. The rationale ties the session to hinge rebuilding and back safety, though it is somewhat generic about what is lost by skipping. Season revision: The answer names Atlas in the season goal, season rationale and block rationale, keeps block 1 starting on 2026-10-21 and returns all eight keys with seven week sessions. However, the season was not truly re-planned: Paris-Brest-Paris in August 2027 is absent from the blocks and the season still ends on 2027-04-04, while the taper and April brevet blocks sit after the Atlas race on 28 February. Tomorrow was populated even though the supplied value was null and should have been kept, the past Thursday session was relabelled with an invented weather cancellation reason, and tomorrow's interval durations sum to 64 minutes against a stated 90. Today's session is detailed and grounded in the rain forecast and heart-rate limits, but several rationales narrate the change (for example the season rationale says the goal now explicitly includes Atlas) rather than stating the plan as it stands.

bytedance-seed/seed-2.0-mini

7.4/12.5

ByteDance Seed: Seed-2.0-Mini

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	55.7 s	$0.00728	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00639	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.9/2 · Design 0.9/3 · Rationale 1.1/2 · Grounding 1.4/2 · Detail 0.7/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, TSS, FTP and null bikeWorkout all match the plan for 2026-10-30. The main weakness is the description, which names the session and rest periods but never lists the exercises, sets, reps or loads, even though the athlete explicitly asked for very specific strength workouts and the plan calls for three goblet squat sets and two split-squat sets. The rationale is reasonably grounded in the back-protection goal and the block focus, but it says skipping only delays progress and gives no concrete loss, and the claim that the session will eliminate back pain overstates it. Rest guidance tied to the heart-rate ceiling is a useful, grounded touch. Season revision: The season block is refreshed with Atlas named in the season goal and rationale, block 1 keeps its 2026-10-21 start, and tomorrow, nextWeek and nextBlock are correctly left null. However, the current block 1 is essentially unchanged: its name, focus, rationale and all seven week targets match the supplied plan, and no week or block rationale mentions Atlas, which fails the requirement for a genuinely changed block 1. The season also lacks an Atlas taper, the post-brevet block has weekCount 20 for a span of about 21 weeks, and the response returns coachQuestion and modelsRemarks although the revision request lists eight keys. The current week and today's session are coherent and grounded in the supplied data, with FTP and bodyMetrics handled correctly.

Inception: Mercury 2

7.4/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	11.9 s	$0.0107	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00570	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 0.9/2 · Grounding 1.0/2 · Detail 0.8/2

Combined judgment: Today plan: The candidate correctly keeps the planned Friday gym session with the right date, status, type, intensity, duration and TSS, and it follows the week's rule of replacing floor deadlifts with elevated pulls and capping split squats at two sets. The exercise list is specific with sets, reps, rest and a flat-back cue, though it omits the lighter goblet squat and the athlete's requested heart-rate-free strength structure is fine. The rationale ties the session to back pain, cycling posture and the 5K goal but does not mention the fat-loss goal or the cost of skipping in terms of hunger control, and the description lacks stop conditions or a fallback if the back aches. Overall it is a sound, grounded session with moderate execution detail. Season revision: The response keeps block 1 starting on 2026-10-21, leaves the blocks that ended before today alone, and returns seven week sessions with a matching today session. Atlas appears only in the season goal; the block name, focus, rationale and weeks never mention it, so block 1 is barely changed and does not prepare for Atlas. The season also drops Paris-Brest-Paris in August 2027, ends on 2027-04-04, and places the brevet-specific block after the February 28 Atlas race, which breaks the chronological logic. Future sessions have null estimatedFtpWatts, including today, although the instructions asked for daily projections, and past sessions were relabelled as planned workouts.

keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue after a 2 h 05 min hike. It stays indoors because rain and strong gusts are
forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",

openai/gpt-4.1-mini

7.4/12.5

OpenAI: GPT-4.1 Mini

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	19.3 s	$0.0160	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00601	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.0/2 · Grounding 1.2/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid and matches the requested today object, with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP, 30 TSS and null bikeWorkout for a gym day. The session follows the Strength B plan with elevated pulls and split squats, and the rest guidance respects the athlete's heart-rate and lower-back constraints. However, the description gives no sets, reps, or loads for the pulls and split squats, even though the athlete explicitly asked for very specific strength prescriptions, and it omits stop conditions or a pain fallback. The rationale is grounded in the back and saddle issues but the claimed loss from skipping is somewhat generic. Season revision: The candidate names Atlas in the season goal and keeps block 1 starting on 2026-10-21, but the season blocks are copied unchanged from the old April-brevet plan, so PBP in August 2027 is absent and the Atlas race on 28 February 2027 is not built into the block structure. Block 1 is essentially unchanged apart from rationale wording, which fails the requirement for a genuinely changed block. Contract issues include the Monday rest session carrying status completed instead of rest, and the past missed Thursday session carrying an estimated FTP and a workout type. The day-level content for today is reasonable and grounded in the supplied data, but the overall revision does not reflect the new goal. Hard gates failed: block 1 is unchanged.

openai/gpt-oss-20b

7.3/12.5

OpenAI: gpt-oss-20b

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	23.2 s	$0.00018	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00626	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.7/2 · Design 0.8/3 · Rationale 0.3/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON shape, date, planned status, workout type, moderate intensity, 45-minute duration and indoor flags all match the required Friday gym session and the week plan. The exercise selection follows the plan's goblet squat, elevated pull, split squat and core progression, with rest periods and a heart-rate cap that fit the athlete's back concerns. However, optionalRationale is left empty even though the prompt requires the rationale to name the concrete adaptation and the loss from skipping, and the description does not give a stop condition or an explicit assumption for the unknown pull load beyond the 10 kg figure. Season revision: The response keeps the eight top-level keys and the 2026-10-21 start for block 1, and it names Atlas in the season goal and rationale. However, the season blocks are essentially the old brevet-shaped plan ending 2027-04-04, so Atlas on 28 February, the August Paris-Brest-Paris and the brevet series are not actually re-planned. Block 1 is nearly unchanged apart from a trimmed rationale, its name, focus and rationale never mention Atlas, and the rationale contains meta-commentary about what was aligned or adjusted. The today object also carries an extra estimatedFtpWatts field not in its contract, and the completed hike is marked outdoor false despite being an outdoor activity.

However, the season blocks are essentially the old brevet-shaped plan ending 2027-04-04, so Atlas on 28 February, the August Paris-Brest-Paris and the brevet series are not actually re-planned. Block 1 is nearly unchanged apart from a trimmed rationale, its name, focus and rationale never mention Atlas, and the rationale contains meta-commentary about what was aligned or adjusted. The today object also carries an extra estimatedFtpWatts field not in its contract, and the completed hike is marked outdoor false despite being an outdoor activity.

    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April. Whenever I
have been doing disciplined training, I have only been able to do so and maintain progress for a maximum of
4 months, usually less.",
    "rationale": "The season remains focused on building a durable aerobic base that supports the Atlas
Mountain Race, the 200 km brevet in April, and the Paris-Brest-Paris in August. The plan continues to
emphasize low-intensity, high-volume endurance riding, cadence efficiency, and low-load strength to preserve
recovery. The winter block will incorporate skiing and easy running to maintain aerobic capacity while
limiting concurrent load. The build phase will progress sustained power and long weekend rides, followed by
brevet-specific pacing and fueling practice. The taper will reduce volume while retaining brief intensity to
keep the body primed for the final events.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

qwen/qwen3-next-80b-a3b-instruct

7.3/12.5

Qwen: Qwen3 Next 80B A3B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	50.2 s	$0.00895	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00649	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.4/2 · Design 0.5/3 · Rationale 0.7/2 · Grounding 1.2/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid and matches the requested today shape with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and the 30 TSS from the outline. The session follows the plan's Gym Strength B direction with knee-height rack or trap-bar pulls, split squats and Pallof presses, and it respects the 110 bpm rest guidance from the coach analyses. However, it omits the sets and reps the athlete explicitly asked for in strength work for the split squat and plank progressions, leaves the split squat at 2 sets rather than a clear load or tempo, and does not mention the daily 8-minute mobility routine that the coach replies said should be listed explicitly each day. The rationale is specific to the hinge and sit-bone goal but says little about why today rather than later in the week. Season revision: The season goal now carries the athlete's Atlas wording verbatim, but the season blocks are unchanged from the old April 2027 brevet shape, so there is no Atlas build to 28 February 2027 and Paris-Brest-Paris in August 2027 is never planned. Block 1 is effectively the supplied block with only a rewritten rationale, so the required genuinely changed block with Atlas in its name, focus or rationale is missing, which is a hard failure. The request said tomorrow and next week were null or not planned and should stay so, yet the candidate populated both, and the season rationale and tomorrow rationale use meta wording about replacing or remaining unchanged. Its strengths are the coherent current week, the correct 2026-10-21 block start, and reasonable, grounded session detail for the upcoming days. Hard gates failed: block 1 is unchanged.

4 months, usually less.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and
low-load strength before introducing limited threshold work. The winter block preserves cycling while using
skiing and easy running for cross-training durability. The build phase then progresses sustained power and
long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load.
The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness.",

aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting work, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

deepseek/deepseek-v4-flash

7.2/12.5

DeepSeek: DeepSeek V4 Flash 0423

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	95.8 s	$0.00262	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00652	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.8/1.5 · Fidelity 1.0/2 · Design 1.4/3 · Rationale 0.2/2 · Grounding 1.2/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON matches the requested shape and date, and the session correctly stays indoors with null bikeWorkout, 45 minutes, moderate intensity and 220 W FTP. The main weakness is that optionalRationale is empty even though the session is not optional, so the required explanation of purpose and what is lost by skipping is missing. The description also prescribes three sets of bodyweight split squats, which contradicts the week plan and the coach reply that cap split squats at two sets. The exercise sets, reps and rest are specific, but there is no load progression, RPE guidance or stop condition beyond a brief note. Season revision: The season names Atlas and block 1 starts on 2026-10-21, and the season tiles through 2027-04-04 with no gaps. However, block 1 is barely changed beyond its rationale and a few target-load strings, and neither the block nor the week mentions Atlas preparation. The season adds a 'mountain-bike' focus the athlete never stated, and its shape runs about six months despite the athlete's stated four-month ceiling, which the rationale only gestures at. The output also adds coachQuestion and modelsRemarks beyond the eight requested top-level keys, marks the Monday rest day as completed instead of rest, and gives past sessions estimatedFtpWatts values inconsistently, against the instruction to leave past sessions null. The rationales for the season and block read as meta-commentary about what was changed.

However, block 1 is barely changed beyond its rationale and a few target-load strings, and neither the block nor the week mentions Atlas preparation. The season adds a 'mountain-bike' focus the athlete never stated, and its shape runs about six months despite the athlete's stated four-month ceiling, which the rationale only gestures at. The output also adds coachQuestion and modelsRemarks beyond the eight requested top-level keys, marks the Monday rest day as completed instead of rest, and gives past sessions estimatedFtpWatts values inconsistently, against the instruction to leave past sessions null. The rationales for the season and block read as meta-commentary about what was changed.

qwen/qwen3-30b-a3b

Qwen: Qwen3 30B A3B

7.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	50.5 s	$0.00634	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00598	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 0.9/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid with the requested today object, correct date, status planned, workout and moderate enums, 45 minutes, indoor flag set correctly for the gym, and a null bikeWorkout. The session matches the plan's Friday Gym Strength B, but the description omits the exact exercises, loads and sets the athlete asked for, and it drops the 22 October feedback that the goblet squat and 3-set caps should be kept, so the programming is less specific than the athlete's request for exact sets and reps. The rationale is grounded in the back and hinge goals but does not mention the fat-loss or fatigue context in detail, and it also lacks an explicit fallback for quad burn or back pain. Season revision: Atlas is named in the season goal, but the season blocks still end on 2027-04-04 and are the old April-brevet shape, with no Atlas-specific block and no Paris-Brest-Paris window, so the season was not really re-planned around the new goal. The current block's name, focus and first week are unchanged and no block rationale mentions Atlas. The response also breaks explicit instructions: nextWeek was supplied as null but was filled with a full detailed week, past sessions carry non-null estimatedFtpWatts values, and the Monday rest day uses status completed instead of rest. The current-week and today detail are concrete and grounded in the recorded activities, with sensible indoor cadence and heart-rate targets for a rainy Sunday.

#153

nvidia/nemotron-3-super-120b-a12b

7.2/12.5

NVIDIA: Nemotron 3 Super

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	151.4 s	$0.00753	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00618	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.6/2 · Design 0.9/3 · Rationale 0.0/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON contract, date, status, planned state, moderate 45-minute indoor gym workout, 30 TSS and 220 W FTP all match the plan and the athlete's gym constraints. The exercise prescription is specific with sets, reps, rest and a heart-rate cap, and it respects the lower-back and quad caveats from recent feedback, though it drops the goblet squat progression the week plan calls for. The major weakness is that optionalRationale is left empty even though the prompt requires today's session purpose and what is lost by skipping it, and detail lacks load progression or stop conditions. Season revision: The output is valid JSON with the required eight keys, block 1 starts on 2026-10-21, and the season goal names the Atlas Mountain Race. However the season was not really re-planned: the block list is unchanged, still ends on 2027-04-04, has no Atlas-specific peak or taper before 28 February 2027, and does not extend to Paris-Brest-Paris in August 2027. Block 1 is essentially unchanged in its name, focus, and weeks, and neither the block, week, nor today rationale mentions Atlas preparation. Some past session records were also altered, such as the Tuesday strength session shortened to 21 minutes and the Wednesday rowing and run merged into one 47-minute entry with an inflated 100 TSS. Hard gates failed: block 1 is unchanged.

TODAY PLAN

8.2/12.5

Z.ai: GLM 4.6V

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	275.5 s	$0.0224	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00597	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.7/3 · Rationale 1.1/2 · Grounding 1.2/2 · Detail 1.0/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, and an estimated FTP of 220 W consistent with the plan. The exercise list follows the plan's Gym Strength B direction (knee-height rack pulls, two split-squat sets) but drifts from it by prescribing three split-squat sets of 10-12 per leg, contradicting the two-set cap, and it omits the required rep-based progression guidance tied to the 12 kg goblet squat history. Rest of 90-120 seconds and the upright torso and anti-rotation cues are useful, but the prescription lacks load guidance for the rack pulls and lat pulldowns, and the rationale is somewhat generic about back pain rather than tied to the week's target load. Season revision: The response keeps the eight-key contract, block 1 starts on 2026-10-21, the seven-session week and the today object are consistent, and tomorrow, nextWeek and nextBlock are correctly left null. However, the season blocks are copied unchanged from the old plan: the season still ends 2027-04-04 with a taper for the April brevet, and there is no Atlas build to 28 February 2027 and no Paris-Brest-Paris block in August 2027, even though the goal text names them. Block 1 is essentially unchanged apart from a rewritten rationale, and Atlas appears only in the season goal, a week rationale sentence and an optional rationale, so the block is not genuinely changed for Atlas. The current week and today's session are grounded in the supplied activities and forecast, with sensible indoor placement and heart-rate caps, but the four-month training ceiling is acknowledged in text only and never shapes the season. Hard gates failed: block 1 is unchanged.

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race.",

anthracite-org/magnum-v4-72b

Magnum v4 72B

7.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	B	247.6 s	$0.0919	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00595	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.6/2 · Design 0.6/3 · Rationale 0.7/2 · Grounding 1.2/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid, has only the today root object, and matches the planned 2026-10-30 gym session on date, status, type, intensity, duration, indoor flag, TSS and FTP. The main weakness is the prescription: most exercises list sets but no reps, despite the athlete asking for exact exercises, sets and reps, and the lat pulldown load of 30 kg regresses from the 50 kg the athlete completed last week without explanation. The title B is also too vague, and the loads for glute bridges and Pallof presses are invented without a stated assumption. The rationale is specific to the hinge and posterior-chain goals but its skip-cost sentence is fairly generic. Season revision: The JSON has the eight required keys, seven week sessions, a matching today session, and an empty bodyMetrics array, which is correct. Atlas appears only in the season goal text; the block name, focus, rationale and weeks never name it, so the mechanical Atlas requirement fails and the block is effectively unchanged. The season still ends on 2027-04-04 with the old five-block shape, so Atlas on 28 February 2027 and Paris-Brest-Paris in August 2027 are not built into the season. The block rationale says the structure remains unchanged, which is meta-commentary about the old plan. Block 1 keeps the 2026-10-21 start and the day-level detail for today is reasonable and grounded in the forecast and the 2 h 05 min hike. Hard gates failed: block 1 is unchanged.

TODAY PLAN

  "season": {
    "goal": "Complete a 200 km brevet in early April 2027 with steady pacing, durable aerobic endurance,
efficient cadence, and enough strength to handle hilly terrain. Also prepare for the Atlas Mountain Race on
February 28, 2027 and Paris-Brest-Paris in August 2027.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and
low-load strength before introducing limited threshold work. The winter block preserves cycling while using
skiing and easy running for cross-training durability. The build phase then progresses sustained power and
long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load.
The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness.",

    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

openai/gpt-oss-120b

7.1/12.5

OpenAI: gpt-oss-120b

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	99.0 s	$0.00130	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00603	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.1/1.5 · Fidelity 0.7/2 · Design 0.6/3 · Rationale 0.0/2 · Grounding 1.3/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and matches the date, planned status, 45-minute moderate gym workout, 220 W FTP and indoor flags from the plan. The exercise prescription is sensible and reflects the athlete's feedback: elevated hinge pulls, two split-squat sets, glute bridges, Pallof presses, and a heart-rate ceiling below 110 bpm between sets. However, optionalRationale is an empty string even though the prompt requires an explanation of today's purpose and what is lost by skipping it, which is a major omission. The description also lacks load guidance such as starting weight or RPE, and the sets and rest periods do not fully match the plan's 2-minute rest and goblet-squat notes. Season revision: The response is well formed for the eight requested keys, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and gives a concrete, athlete-grounded Sunday run with sensible heart-rate and weather reasoning. Its main weakness is that the season is not really re-planned for the new goal: Atlas appears only in the season goal text, while the block names and season blocks still build to an April 200 km brevet with a taper ending 2027-04-04, and Paris-Brest-Paris in August 2027 is absent. Future sessions also carry estimatedFtpWatts of 0 instead of estimates or null, and the block 1 change is mostly limited to rationale and week focus wording.

qwen/qwen3-30b-a3b-instruct-2507

7.1/12.5

Qwen: Qwen3 30B A3B Instruct 2507

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	68.1 s	$0.00492	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00691	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.4/2 · Design 0.9/3 · Rationale 1.0/2 · Grounding 0.5/2 · Detail 1.2/2

Combined judgment: Today plan: The session choice and execution detail are strong: the hip-hinge pulls, split squats, Pallof presses, planks, rest periods and the heart-rate ceiling fit the Week 1 plan and the athlete's back constraints. The main failure is the status, which is set to completed even though no activity is recorded for 2026-10-30 and the gym session is still only planned, which is a fabricated completion. The rationale is grounded and specific to the back and sit-bone goals, but it does not address the planned goblet squat work the Week 1 plan lists for the gym sessions. Season revision: The response keeps block 1 starting on 2026-10-21, mentions Atlas in the season goal and tomorrow's rationale, and returns all eight keys with seven current-week sessions. However, it breaks several explicit revision instructions: tomorrow, nextWeek and nextBlock were supplied as null and should have stayed null, yet the response fills all three with new plans. The season still builds to an early-April 200 km brevet with a taper after it, so the Atlas race on 28 February 2027 has no taper or recovery and Paris-Brest-Paris in August 2027 is absent from the season blocks. Today's session also invents a completed status and heart-rate observations for a run that was never recorded, and block 1 is essentially unchanged apart from its rationale. Hard gates failed: block 1 is unchanged.

bodyweight split squats (30 seconds per leg), maintaining a neutral spine and controlled descent. Finish
with 3 sets of 30-second planks (with knees down if needed), 3 sets of 10 Pallof presses per side (light
resistance), and a 5-minute cool-down with hip and spine mobility stretches. Keep your heart rate below 110
bpm between sets to preserve recovery and prevent overloading your lower back.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge mechanics essential for long-term cycling
posture and back protection, directly addressing your chronic lower-back pain and sit-bone discomfort.
Skipping it would compromise your ability to progress safely into heavier strength work and longer endurance
sessions, increasing injury risk and undermining your fat-loss goal by disrupting metabolic consistency. It
is critical to establish this foundation before advancing to higher-volume gym sessions."

SEASON REVISION

5.2/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
64.6 s	**$0.00322**	**no**	**yes**	**200**	**stop**

Contract 1.2/1.5 · Fidelity 0.4/2 · Design 0.9/3 · Rationale 1.0/2 · Grounding 0.5/2 · Detail 1.2/2

Judgment: The response keeps block 1 starting on 2026-10-21, mentions Atlas in the season goal and tomorrow's rationale, and returns all eight keys with seven current-week sessions. However, it breaks several explicit revision instructions: tomorrow, nextWeek and nextBlock were supplied as null and should have stayed null, yet the response fills all three with new plans. The season still builds to an early-April 200 km brevet with a taper after it, so the Atlas race on 28 February 2027 has no taper or recovery and Paris-Brest-Paris in August 2027 is absent from the season blocks. Today's session also invents a completed status and heart-rate observations for a run that was never recorded, and block 1 is essentially unchanged apart from its rationale.

RETURNED JSON

```
{
  "season": {
    "goal": "Complete a 200 km brevet in early April 2027 with steady pacing, durable aerobic endurance,
efficient cadence, and enough strength to handle hilly terrain. Prepare for the Atlas Mountain Race on
February 28, 2027, and Paris-Brest-Paris in August 2027, with consistent training over 4-month blocks.",
    "rationale": "The athlete's updated goal shifts focus from a single brevet to a sequence of long-
distance cycling events, requiring a phased, sustainable training approach. The athlete has a history of
maintaining disciplined training for only 4 months at a time, so the season is structured into three
distinct 4-month blocks: (1) Aerobic Base and Strength Foundation (Oct–Dec 2026), building durable aerobic
fitness and cadence efficiency; (2) Winter Build and Cross-Training (Dec 2026–Jan 2027), maintaining cycling
specificity while using skiing and running for cross-training durability; (3) Endurance and Sustained-Power
Build (Jan–Feb 2027), progressing threshold power and long endurance for the Atlas Mountain Race. The
brevet-specific phase (Mar 2027) and taper (Apr 2027) remain unchanged. The block structure ensures
progressive, manageable load with built-in deloads and recovery, aligning with the athlete's self-reported
limits and performance history. The 225 W FTP baseline is retained as no fresh threshold test justifies a
change.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block remains unchanged from the original plan, as the athlete's recent training
confirms the need for a conservative, aerobic-first approach. The three-hour Zwift race (187 bpm average HR)
and additional strength/pole-vaulting work in Week 1 created significant fatigue, undermining the intended
recovery. This necessitates a cautious rebuild in Week 2, with strict heart-rate control (under 140 bpm),
cadence focus (above 85 rpm from the first minute), and no make-up sessions. The block's purpose is to
establish durable aerobic fitness and consistent cadence before introducing threshold work in Week 3. The
athlete's self-reported limit of 4 months of disciplined training supports this phased, low-risk
progression. The 225 W FTP baseline is retained as no fresh threshold data justifies a change.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

deepseek/deepseek-chat

7.1/12.5

DeepSeek: DeepSeek V3

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	133.0 s	$0.0119	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00617	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 1.3/2 · Detail 0.8/2

Combined judgment: Today plan: The JSON is clean and the date, planned status, 45-minute duration, moderate intensity, indoor flag, null bikeWorkout and 220 W FTP all match the plan. The description is weak on strength specificity: it prescribes 3 sets of each exercise, which contradicts the plan's cap of 2 bodyweight split-squat sets, and it gives no reps, loads, or progression for the knee-height pulls even though the athlete asked for very specific sets and reps. The rationale is grounded in the hip hinge, back-pain and cycling-posture goals, and the 90 to 120 second rest and below 110 bpm cues come from the coach feedback, but the description lacks stop conditions or fallbacks. Season revision: The season goal and new block names do mention Atlas, and block 1 correctly starts on 2026-10-21 with the later blocks tiling to the season end. However, the Atlas Mountain Race on 28 February 2027 is placed inside a block that ends on 2027-02-28 while the Atlas Preparation block only begins on 2027-04-05, after the race, which is a serious chronological error. Block 1 is essentially the supplied block with its rationale still saying the structure remains unchanged, so it is not a genuinely changed block, and the current week and today session are carried over almost verbatim. The output also adds coachQuestion and modelsRemarks beyond the eight keys requested in the revision, and the rationales still describe the old plan rather than the plan as it stands. Hard gates failed: block 1 is unchanged.

TODAY PLAN

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, Paris-Brest-Paris in August 2027, and a 200 km brevet in April 2027 with steady pacing, durable aerobic endurance, efficient cadence, and enough strength to handle hilly terrain.",
    "rationale": "The season now aligns with the athlete's updated goal of completing the Atlas Mountain Race, Paris-Brest-Paris, and a 200 km brevet. Recent training supports a conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a need to manage fatigue carefully. The first block emphasizes aerobic consistency, cadence, and low-load strength before introducing limited threshold work. The winter block preserves cycling while using skiing and easy running for cross-training durability. The build phase then progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

google/gemma-4-26b-a4b-it

6.9/12.5

Google: Gemma 4 26B A4B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	102.9 s	$0.00411	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00550	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 0.9/2 · Detail 0.5/2

Combined judgment: Today plan: The response is valid JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and a null bikeWorkout, and it matches the Gym Strength B session already in the current plan. The description is the main weakness: it names elevated pulls and two split squat sets but gives no sets, reps, loads, or exercise list for the pulls, which falls short of the athlete's explicit request for very specific strength workouts. The rationale ties the session to posterior-chain and lower-back goals but does not state a concrete loss from skipping, and optional is correctly false. Season revision: The season goal was updated to name Atlas and the block starts on 2026-10-21, which meets the hard requirements. However, the season blocks were not re-planned for the Atlas race, PBP, or the brevet series: the old 200 km April plan is kept and the season still ends 2027-04-04, so Atlas on 28 February is not built toward and PBP in August is absent. The tomorrow object was altered from null to a near-empty workout object rather than kept as supplied, and week sessions for the days after today remain generic, with the weekly rationale still describing the replaced plan. The week's Wednesday session was merged and the today alternatives text was duplicated, which weakens coherence and detail.

```
{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April. Whenever I
have been doing disciplined training, I have only been able to do so and maintain progress for a maximum of
4 months, usually less.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block emphasizes aerobic consistency, cadence, and low-load
strength before introducing limited threshold work. The winter block preserves cycling while using skiing
and easy running for cross-training durability. The build phase then progresses sustained power and long
endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The
final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

mistralai/mixtral-8x22b-instruct

6.9/12.5

Mistral: Mixtral 8x22B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	20.1 s	$0.0792	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00611	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.5/2 · Design 0.8/3 · Rationale 0.9/2 · Grounding 0.7/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and matches the planned Friday gym session on 2026-10-30 with the correct indoor flags, 45 minutes, moderate intensity, 30 TSS, and 220 W FTP. The rationale ties the session to lower-back resilience and saddle discomfort, and the description reuses the coach's prior heart-rate rest guidance. However, the athlete explicitly asked for very specific strength workouts with exercises, sets, and reps, and the description gives no sets or reps for the pulls or anti-rotation work, omits the goblet squat and pulldown work from the week, and offers no load progression or stop conditions. Season revision: Atlas appears only in the season goal text; the season block list still ends on 2027-04-04 with no Paris-Brest-Paris window, and the block name, focus and rationale never mention Atlas, so block 1 is essentially unchanged and the design does not build toward the 28 February 2027 race. The day-of-week labels are shifted by one day throughout the week (26 October 2026 is a Monday, not a Sunday), and today's 1 November session is marked completed with a 'Completed: 30 minutes' note even though no such activity was recorded, which invents training data. Rationale text also includes meta-commentary such as 'remains unchanged', and the outline and today detail are otherwise reasonable and consistent with the athlete's aerobic and cadence constraints. Hard gates failed: block 1 is unchanged.

qwen/qwen3-coder-30b-a3b-instruct

6.8/12.5

Qwen: Qwen3 Coder 30B A3B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	208.0 s	$0.00353	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00633	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.1/2 · Detail 0.5/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 30 TSS and 220 W FTP from the plan. The description is the main weakness: it names only the plan's themes (elevated pulls, split squats) and gives no exercises, sets, reps, loads, rest periods or stop conditions, even though the athlete explicitly asked for very specific strength workouts and the athlete's feedback about quad burn and rest between sets was available to use. The rationale ties the session to back pain and saddle discomfort reasonably well but leans on generic phrasing, and it does not draw on the recent comments about quad fatigue or the athlete's heart-rate-driven rest guidance. Season revision: The response returns the eight required keys with seven week sessions and keeps block 1 starting on 2026-10-21, and the season blocks tile to 2027-04-04. Atlas appears only in the season goal text: no block name, focus or rationale is re-planned for Atlas, Paris-Brest-Paris is absent from the block structure, and block 1 is effectively unchanged from the supplied version. Fidelity is weakened because tomorrow and nextWeek were supplied as null but the response fills them in, and past sessions carry estimatedFtpWatts values where the instructions require null. Several rationales use meta language such as has been updated and remain unchanged, and some TSS estimates look inflated (for example a 60-minute easy indoor ride at 100 TSS). Hard gates failed: block 1 is unchanged.

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

thedrummer/cydonia-24b-v4.1

6.8/12.5

TheDrummer: Cydonia 24B V4.1

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	235.6 s	$0.0108	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00607	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 0.9/2 · Detail 0.4/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned Friday gym session on 2026-10-30 in date, status, type, intensity, duration, indoor flag, TSS and FTP. The description is the main weakness: it names only the pulls and split squats and gives no exercises, sets, reps, rest periods, load guidance or heart-rate stop conditions, even though the athlete explicitly asked for very specific strength workouts and the coach had set 90 to 120 seconds rest with heart rate below 110 before sets. The optionalRationale ties the session to back pain, saddle discomfort and core stability, which is reasonable, but the fat-loss sentence is generic and the rationale does not reference the athlete's recent gym feedback. Season revision: The output is valid, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and names Atlas in the season goal and rationale. However, the season blocks are essentially the old ones with no Atlas-specific block, the season still ends on 2027-04-04 so Atlas and Paris-Brest-Paris are not planned, and the current block's name, focus and rationale do not mention Atlas, so block 1 is barely changed. The Thursday 2026-10-29 session was rewritten into a prescribed indoor ride whose intervals total 36 minutes against a 60-minute description, and it carries a TSS for a session marked missed. Past-day descriptions were also reworded, and today's description has rationale sentences appended to it. Hard gates failed: block 1 is unchanged.

HARD GATES	JUDGE COST	JUDGED
pass	$0.00600	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.4/2 · Design 0.5/3 · Rationale 0.2/2 · Grounding 1.1/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP and a TSS of 30, matching the current week plan for Friday. The session design is sensible, with knee-height pulls, split squats and anti-rotation work with clear sets, reps and rest, and it respects the heart-rate cap from the coach. However, optionalRationale is left empty even though optional is false and the prompt requires an explanation of the session's purpose against the season goal and the loss from skipping it, and the description never states that purpose. Loads are not specified and the daily mobility circuit is not mentioned, which limits execution detail. Season revision: The response keeps the eight top-level keys and block 1 starting on 2026-10-21, and it names Atlas in the season goal and rationale. However, block 1 is essentially unchanged: its name, focus, weeks and rationale are carried over, and nothing in the block or its weeks prepares the athlete for Atlas. The season lists only block 1 and keeps the old endDate of 2027-04-04, so the Atlas-to-PBP season is not re-planned, blocks do not tile through the season end, and Paris-Brest-Paris is absent from the block structure. The block rationale also contains meta-commentary about what remains unchanged and what was realigned, which the prompt forbids, and the Monday rest session was relabelled from rest to completed status. The current week and today's session are coherent and grounded in the supplied activities, but they do not reflect the new goal.

Contract 1.2/1.5 · Fidelity 0.4/2 · Design 0.5/3 · Rationale 0.7/2 · Grounding 1.1/2 · Detail 1.0/2

Judgment: The response keeps the eight top-level keys and block 1 starting on 2026-10-21, and it names Atlas in the season goal and rationale. However, block 1 is essentially unchanged: its name, focus, weeks and rationale are carried over, and nothing in the block or its weeks prepares the athlete for Atlas. The season lists only block 1 and keeps the old endDate of 2027-04-04, so the Atlas-to-PBP season is not re-planned, blocks do not tile through the season end, and Paris-Brest-Paris is absent from the block structure. The block rationale also contains meta-commentary about what remains unchanged and what was realigned, which the prompt forbids, and the Monday rest session was relabelled from rest to completed status. The current week and today's session are coherent and grounded in the supplied activities, but they do not reflect the new goal.

  },
  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue.",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control.",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

google/gemma-3-27b-it

Google: Gemma 3 27B

6.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	161.4 s	$0.00430	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00518	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.8/1.5 · Fidelity 0.5/2 · Design 1.0/3 · Rationale 0.5/2 · Grounding 0.9/2 · Detail 0.5/2

Combined judgment: Today plan: The candidate returns the correct today object for 2026-10-30 as a planned moderate 45-minute indoor gym workout with no bike workout and correct TSS and FTP, matching the current week plan. The exercise selection follows the plan's Gym B progression (rack pulls, two split-squat sets, Pallof and planks) and gives rest guidance, though it omits the explicit weight, load progression and the 110-120 second rest tie-in, and the rep ranges are broader than the athlete's requested very specific prescription. The rationale is tied to back pain and posture but is somewhat generic and does not mention the fat-loss goal or the hunger-control context that the block depends on. Season revision: The season names Atlas and adds an Atlas Mountain Race Preparation block, but that block is dated 2027-03-01 to 2027-02-28, which is an inverted range, and it overlaps the brevet block with the same start date, so the season does not tile. Block 1 is kept starting 2026-10-21 and the current week's sessions are mostly reproduced as supplied, but the block plan itself is largely generic (e.g. Week 1 focus renamed to Recovery and Aerobic Rebuild) and does not mention Atlas. Tomorrow's session was filled in although tomorrow was supplied as not planned, and the today rationale and the tomorrow session still carry the old season logic with no Atlas-specific reasoning, while the week's completed-session statuses and estimated TSS for past days were left unreviewed.

mistralai/codestral-2508

Mistral: Codestral 2508

6.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	26.9 s	$0.00441	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00605	anthropic/claude-haiku-5.5

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	pass	pass

Hard gates: the response never mentions Atlas

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.3/2 · Design 0.4/3 · Rationale 0.6/2 · Grounding 0.9/2 · Detail 0.8/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, and the date, planned status, 45-minute moderate gym workout, indoor flag, 220 W FTP, and TSS of 30 all agree with the plan. The session is sensibly built around the hinge, core, and glute work with 90 to 120 seconds of rest, but it drops the goblet squats that the week plan says to hold at three sets, and it gives no load guidance, RPE, or stop conditions for the rack pulls. The optionalRationale ties the session to back pain and saddle discomfort, though the explanation of the loss from skipping is somewhat generic. Season revision: The response is valid JSON with the eight keys, seven week sessions and correctly null tomorrow, nextWeek and nextBlock, and block 1 does start on 2026-10-21. However, Atlas is never mentioned anywhere: the season goal still reads as the 200 km brevet, the Paris-Brest-Paris target is absent, and blocks 2 to 5 are copied unchanged, so the survey adjustment was not applied and block 1 is effectively unchanged. Several session day names are wrong (for example 2026-10-26 is labelled Wednesday and 2026-11-01 is labelled Tuesday), and the block and week rationales are meta-commentary about what remains unchanged or was realigned. Hard gates failed: the response never mentions Atlas.

{
  "season": {
    "goal": "Complete a 200 km brevet in early April 2027 with steady pacing, durable aerobic endurance, efficient cadence, and enough strength to handle hilly terrain.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and low-load strength before introducing limited threshold work. The winter block preserves cycling while using skiing and easy running for cross-training durability. The build phase then progresses sustained power and long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

meta-llama/llama-4-maverick

6.7/12.5

Meta: Llama 4 Maverick

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	143.2 s	$0.00707	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00637	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 0.9/2 · Grounding 0.5/2 · Detail 0.8/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 30 TSS, 220 W FTP and null bikeWorkout all match the plan for Friday. The description is weak for an athlete who asked for very specific strength prescriptions: it names only the pulls and two split-squat sets and never lists the full exercise order, sets, reps or load guidance. The rationale and grounding are good, tying the session to the hip-hinge work, the back protection goal and the posterior-chain focus, with the 90 to 120 second rest and below 110 bpm cue taken from the coach feedback. Stop conditions and progression rules are largely absent. Season revision: The season does name the Atlas Mountain Race and the blocks tile without gaps, and block 1 keeps its 2026-10-21 start with bodyMetrics correctly empty. However, the Atlas chronology is broken: the Atlas Mountain Race Preparation block runs 2027-03-01 to 03-21, after the 28 February race, and the taper is labelled as preceding Atlas. Block 1 itself is essentially unchanged apart from a rewritten rationale, and neither its name nor its rationale mentions Atlas, so the block revision requirement is weakly met. The candidate also fabricates today's completion, marking the 1 November run as completed with done-as-planned wording although no activity was recorded for that day, and it rewrites the past Thursday 29 October from no recorded activity into a planned and missed indoor ride with an FTP value. The Monday rest day is marked completed instead of rest.

TODAY PLAN

6.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	277.1 s	$0.0153	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00611	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.9/2 · Design 1.2/3 · Rationale 0.4/2 · Grounding 1.2/2 · Detail 0.9/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned gym session on 2026-10-30 with the right type, intensity, duration, indoor flag and FTP, and it ties the session to the elevated pull and split squat plan. However, the description lacks the exact sets, reps and loads the athlete asked for in strength workouts, and it omits the explicit two bodyweight split squat sets and the goblet squat progression from the week plan. The optionalRationale is empty even though optional is false, and the rationale does not explain the adaptation or the concrete loss from skipping the session toward the fat-loss and back-strength goals. Season revision: The candidate names Atlas in the season goal and the Atlas Build block, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and gives a coherent Sunday session with a sensible rationale. However, the season drops the April 200 km brevet entirely, since the Recovery and Transition block runs from March 1 and no block covers April, and the Atlas Build block ends on race day (2027-02-28) with no taper before the event. Block 5 also lists weekCount 16 for a span of about 14 weeks, and the block 1 changes are minimal beyond a new rationale. The response also returns ten top-level keys including coachQuestion and modelsRemarks, and it adds unsupported details such as recent testing and heat acclimation.

mistralai/mistral-small-3.2-24b-instruct

6.4/12.5

Mistral: Mistral Small 3.2 24B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	78.4 s	$0.00373	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00566	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 1.2/2 · Detail 0.7/2

Combined judgment: Today plan: The response is valid JSON with the requested today shape, correct date, planned status, workout type and moderate intensity, and it keeps the gym session indoors with bikeWorkout null, which fits the plan. However, the description is thin: it names the planned exercises but gives no sets, reps, loads, or explicit goblet squat and hinge prescription, despite the athlete asking for very specific strength workouts with exercises, sets and reps. The rationale ties to back pain and saddle discomfort but overstates the metabolic benefit and lacks a concrete statement of what is lost by skipping, and the candidate ignores the coach note to keep split squats to two bodyweight sets and the 90 to 120 second rest and below 110 bpm cue only partially. Season revision: The response keeps block 1 starting on 2026-10-21, keeps the seven-session week and the matching today session, and leaves tomorrow, nextWeek and nextBlock null. It mentions Atlas only in the season goal and rationale; the block plan, block rationale and weeks never name or prepare for Atlas, so the survey change was not really worked into the plan. The season still ends on 2027-04-04 with the original five blocks, so Paris-Brest-Paris in August 2027 is absent and the season was not re-planned to cover the new goals. The optionalRationale refers to a marathon, which the athlete never mentioned, and the season rationale reads as commentary on what changed rather than the plan as it stands. Today's session and the week's sessions are reasonable and grounded in the supplied activities, forecast and weekly note.

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

meta-llama/llama-3.3-70b-instruct

6.4/12.5

Meta: Llama 3.3 70B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	39.2 s	$0.00570	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00545	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.9/2 · Grounding 1.0/2 · Detail 0.6/2

Combined judgment: Today plan: The JSON is clean and matches today's date, planned status, indoor gym workout, 45 minutes, moderate intensity, 220 W FTP and 30 TSS from the current week plan. The description is weak on execution: it names the pulls and split squats but gives no exercises, sets, reps, loads or RPE guidance, even though the athlete explicitly asked for very specific strength workouts. The rationale is generic, saying it builds a foundation and prevents injury, without naming the concrete adaptation for the hinge and back-strength goal or what is lost by skipping. Season revision: The season is refreshed to name Atlas and PBP and block 1 keeps its 2026-10-21 start, but the candidate fails to make block 1 genuinely changed: its focus, weeks and targetLoad are copied from the supplied plan with no Atlas preparation. The week's day labels are wrong (2026-10-26 is a Monday, not Tuesday, and 2026-11-01 is a Sunday, not Monday), the Sunday date is misattributed, and the week's sessions for dates before today are reshaped (Thursday strength work is shown as Thursday rowing, Friday's missed slot is retitled). The season tiling extends to 2027-08-31 with a generic PBP block of 21 weeks, which is vague, and the season ignores the Atlas build beyond relabelling the goal. Today's session is kept from the supplied plan, which is acceptable, but the rationale for today still refers to the old plan's structure rather than a revised Atlas-driven design, and the output has no Atlas-specific training content anywhere in the block or week.

mistralai/ministral-3b-2512

6.3/12.5

Mistral: Ministral 3 3B 2512

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	18.8 s	$0.00336	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00563	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 0.5/2 · Design 0.9/3 · Rationale 0.8/2 · Grounding 0.7/2 · Detail 0.5/2

Combined judgment: Today plan: The session content is sensible and grounded in the plan: Gym Strength B with elevated rack or trap-bar pulls, two bodyweight split-squat sets, Pallof presses, planks, and rest guidance that matches the coach's 90 to 120 second recovery cue. The main failure is fidelity: the status is marked completed even though no activity is recorded for 2026-10-30, so the planned session is misrepresented as done. The 30 to 40 kg pull loads are invented without a stated assumption, and the description never names a fallback for pain or equipment, though the rationale ties the session well to the back and hip goals. Season revision: The season goal and rationale name Atlas and PBP, but the season blocks are unchanged from the old 200 km-only shape, so the season was not genuinely re-planned around Atlas on 28 February 2027 and the block 5 taper still ends on the April brevet. Block 1 is not materially changed and does not mention Atlas, and the block rationale is largely meta commentary about the update. Week 2 sessions were rewritten with completion notes for past days and Tuesday and Wednesday titles were altered, while today's session replaced the description and drifted from the supplied rationale, and the tomorrow session was filled in with a strength day that the week outline did not specify. Tomorrow and today statuses are inconsistent, and the candidate ignored the rain forecast by making Sunday session indoor without stating weather compliance for Monday onward. Overall it is a partial refresh that fails the hard Atlas requirement for the plan shape.

TODAY PLAN

```

```
    "date": "2026-11-01",
    "type": "workout",
    "title": "Short Easy Aerobic Run",
    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 spm. Keep the effort conversational from the first minute
and let pace fall away rather than pushing heart rate up on any incline. Completed: 30 minutes of running
with heart rate averaging 115-135 bpm and cadence around 165-170 spm. The session was indoors due to
forecasted rain and strong gusts, and the effort felt well controlled and aerobic.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "completed",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm; If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This session closes a week of controlled aerobic efforts, ensuring fatigue remains low and
the athlete arrives at Week 3's threshold stimulus fresh. The focus on cadence above 85 rpm and heart-rate
control is critical for the 200 km brevet's efficiency. The short run maintains running-specific durability
with minimal fatigue cost, and the week's structure avoids adding load before the threshold work of Week 3.
The forecasted rain and strong gusts justify the indoor run, and the 115-135 bpm ceiling ensures aerobic
consistency.",
    "optional": false,
    "optionalRationale": "The cost of skipping this session is minimal—it simply maintains running-specific
durability without adding fatigue. However, the session is essential for the week's shape and the upcoming
threshold work in Week 3.",

qwen/qwen3-coder-flash

6.2/12.5

Qwen: Qwen3 Coder Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	53.8 s	$0.0105	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00594	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.1/1.5 · Fidelity 0.5/2 · Design 0.6/3 · Rationale 0.9/2 · Grounding 1.2/2 · Detail 0.6/2

Combined judgment: Today plan: The response correctly keeps today as a planned gym session dated 2026-10-30 with the planned moderate 45-minute duration, FTP 220 W and a TSS near the plan value, and it is valid JSON with the requested shape. However, the description is thin for a session the athlete wants with very specific exercises, sets and reps: it names elevated pulls and two split-squat sets but gives no full exercise list, no sets or reps, no rest periods and no heart-rate or RPE guidance despite the coach's own notes about 90-120 seconds rest and keeping heart rate below 110 before sets. The rationale is reasonable and ties to posterior-chain safety and fat-loss, but it does not address the athlete's specific hunger and evening-eating goals or state what is lost in fat-loss terms, and the claim about higher-intensity training later is generic. Season revision: The response names Atlas and Paris-Brest-Paris in the season goal, but the block plan never mentions Atlas: the season blocks, their names and focus, and the current block are essentially unchanged, so block 1 is not genuinely changed and no Atlas build to the 28 February 2027 race is designed. It also violates the null-preservation rule by filling in tomorrow and nextWeek when the input supplied them as null, and the season rationale reads as meta-commentary about updating the goal. Strengths are the valid eight-key JSON, correct block 1 start date of 2026-10-21, sensible easy week outlines with cadence and heart-rate cues, and a coherent 2026-11-01 run that respects the rain and gust forecast. Hard gates failed: block 1 is unchanged.

TODAY PLAN

cohere/command-a

Cohere: Command A

6.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	100.5 s	$0.1052	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00511	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 0.7/2 · Grounding 0.9/2 · Detail 0.6/2

Combined judgment: Today plan: The response is valid JSON with the requested today shape and matches the date, planned status, workout type and 45-minute moderate intensity from the plan. The description names the right exercises and rest cues but gives no sets, reps, loads, or exercise-by-exercise prescription, despite the athlete asking for very specific strength workouts with exact exercises, sets and reps. The rationale ties the session to back safety and hip hinge, but it does not name the week's target load or the cost to the fat-loss goal, and it leaves out the daily mobility routine that the plan pairs with each day. Season revision: The candidate names Atlas in the season goal and adds an Atlas Mountain Race Preparation block, and block 1 still starts on 2026-10-21, so the hard checks pass. However, the season ends 2027-08-22 rather than covering through Paris-Brest-Paris in August as intended, and the Atlas block is not clearly tied to its 28 February date beyond its dates. The week 1 block entry still carries the start date 2026-10-19 and the block's week 1 is not truly changed, while the current week silently rewrote Thursday from missed to a planned indoor ride and changed the past session statuses despite that day being in the past, which breaks the rule that past days are not re-proposed. The Sunday run was left as planned, but the week's rationale is generic meta-language about the old plan, and the block rationale says the block remains unchanged in substance, so the revision is thin.

TODAY PLAN

qwen/qwen-2.5-72b-instruct

6.1/12.5

Qwen2.5 72B Instruct

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	188.7 s	$0.0118	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00578	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.5/2 · Design 0.6/3 · Rationale 0.7/2 · Grounding 1.2/2 · Detail 0.3/2

Combined judgment: Today plan: The JSON is valid and the today object matches the planned 2026-10-30 Gym session with correct type, intensity, duration, indoor flags, planned status and FTP. The description says to perform the following exercises but then lists none, so there are no exercises, sets, reps, loads or stop conditions, which the athlete explicitly asked for in strength work. The rationale ties the session to core stability and back protection but is fairly generic and does not reference the goblet squat, pull and split squat progression set out in the block plan. Season revision: The JSON has the eight required keys, block 1 starts on 2026-10-21, the past blocks and the unchanged next-day nulls are respected, and Atlas appears in the season goal. However, the block is explicitly described as unchanged, and its name, focus, rationale and week targets never mention Atlas, so the mandatory genuinely-changed block 1 requirement fails. The season blocks still end in an April 2027 brevet taper, with no Atlas peak on 28 February 2027 and no Paris-Brest-Paris in August 2027, and the season rationale is meta commentary about having been adjusted.

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

Google: Gemini 2.5 Flash Lite

5.9/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	11.7 s	$0.00476	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00643	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.5/2 · Design 0.9/3 · Rationale 1.1/2 · Grounding 0.7/2 · Detail 0.5/2

Combined judgment: Today plan: The status, type, intensity, 45-minute duration, indoor flag and FTP match the planned Friday gym session, and the JSON shape is correct. However, the candidate attaches a bikeWorkout with six 10-minute blocks at 70 percent FTP, which is a cycling prescription for a gym day; its intervals total about 70 minutes, contradicting the 45-minute duration, and the prompt requires bikeWorkout to be null for non-bike sessions. The description names the exercises but gives no sets, reps, loads, rest periods or heart-rate gating despite the athlete asking for very specific strength prescriptions, and it omits the 90 to 120 second rest and below 110 bpm start condition the coach set for this week. The rationale ties the session to back pain and cycling posture, which is grounded, but it is somewhat generic. Season revision: The JSON has the eight required keys, seven sessions, the block 1 start of 2026-10-21, and a contiguous season tiling to 2027-08-31, and the season rationale does name the Atlas Mountain Race. However, Atlas is not built into the plan: the Atlas date of 28 February 2027 falls inside the old endurance block with no taper or race-specific week before it, block 1 is essentially unchanged apart from its rationale, and the plan runs continuously for about ten months despite the athlete's four-month ceiling. Fidelity fails because tomorrow was supplied as null but a full Controlled Threshold Intervals session was invented, and today's session was marked completed with a claim that the athlete finished it as planned even though no activity for 2026-11-01 was recorded. The weekly and session detail is concrete and the prescribed power targets are consistent with the 225 W FTP.

TODAY PLAN

6.3/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
1.8 s	$0.00180	no	yes	200	stop

Contract 1.2/1.5 · Fidelity 1.0/2 · Design 1.0/3 · Rationale 1.4/2 · Grounding 1.2/2 · Detail 0.5/2

Judgment: The status, type, intensity, 45-minute duration, indoor flag and FTP match the planned Friday gym session, and the JSON shape is correct. However, the candidate attaches a bikeWorkout with six 10-minute blocks at 70 percent FTP, which is a cycling prescription for a gym day; its intervals total about 70 minutes, contradicting the 45-minute duration, and the prompt requires bikeWorkout to be null for non-bike sessions. The description names the exercises but gives no sets, reps, loads, rest periods or heart-rate gating despite the athlete asking for very specific strength prescriptions, and it omits the 90 to 120 second rest and below 110 bpm start condition the coach set for this week. The rationale ties the session to back pain and cycling posture, which is grounded, but it is somewhat generic.

deepseek/deepseek-v3.2

5.9/12.5

DeepSeek: DeepSeek V3.2

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	147.7 s	$0.0106	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00628	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 1.0/2 · Grounding 0.3/2 · Detail 0.3/2

Combined judgment: Today plan: The JSON is valid and has the requested today fields with correct date, type, intensity and estimated FTP. However, the status is set to completed even though no activity is recorded for 2026-10-30 and the plan lists the session as planned, so the response invents a completed workout. The description then borrows the 102 bpm heart rate and rest-interval details from the 2026-10-27 strength session, which is an ungrounded claim. The description also gives no exercises, sets, reps, loads or rest targets for a session the athlete asked to be very specific, so it offers little execution guidance. Season revision: The response names Atlas in the season goal, season rationale and block rationale, keeps block 1 starting on 2026-10-21, returns seven sessions with a matching today object, leaves tomorrow, nextWeek and nextBlock null, and returns an empty bodyMetrics array, which is correct. However, block 1 is barely changed: its weeks and focus are copied from the supplied plan with no Atlas-specific preparation, and the season places the Atlas race at the start of a block named Taper and Execution that runs after the race, so no taper precedes the February 28 event. The season and block rationales open with meta-commentary about an updated goal, which the instructions forbid, and several week sessions carry altered TSS and duration figures (for example Tuesday rowing TSS changed from 70 to 20) without basis. Monday rest is marked completed rather than rest.

TODAY PLAN

4.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
6.7 s	$0.00390	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 1.2/2 · Grounding 0.3/2 · Detail 0.3/2

Judgment: The JSON is valid and has the requested today fields with correct date, type, intensity and estimated FTP. However, the status is set to completed even though no activity is recorded for 2026-10-30 and the plan lists the session as planned, so the response invents a completed workout. The description then borrows the 102 bpm heart rate and rest-interval details from the 2026-10-27 strength session, which is an ungrounded claim. The description also gives no exercises, sets, reps, loads or rest targets for a session the athlete asked to be very specific, so it offers little execution guidance.

deepseek/deepseek-chat-v3.1

5.8/12.5

DeepSeek: DeepSeek V3.1

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	85.9 s	$0.00954	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00608	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.3/2 · Design 1.0/3 · Rationale 1.1/2 · Grounding 0.3/2 · Detail 0.5/2

Combined judgment: Today plan: The JSON is valid and has the required fields, and the date, workout type, moderate intensity and 45-minute duration match the planned Friday gym session. However, the status is marked completed and the description says you completed the session, but no activity for 2026-10-30 is recorded, so this invents a completed workout and should have stayed planned. The description gives no exercises, sets, reps, rest periods or load guidance despite the athlete asking for very specific strength workouts, and the rationale is reasonable but generic about posture and back protection. Season revision: The response names Atlas in the season goal, season rationale, block 2 and the block 1 rationale, keeps block 1 starting on 2026-10-21, and the season blocks tile from 2026-10-21 to 2027-08-31. However, block 1 is barely changed: its name, focus, weeks and targets are carried over, with only the rationale rewritten, so the requirement for a genuinely changed block 1 is weakly met. The season ignores the athlete's stated four-month ceiling, running about 43 continuous weeks of disciplined work with no reset block. Today's rationale refers to a tomorrow cadence ride that does not exist, the Monday rest day is marked completed rather than rest, and the Wednesday session was merged and altered without a clear basis.

xiaomi/mimo-v2.5

5.7/12.5

Xiaomi: MiMo-V2.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	E	A+	619.9 s	$0.00805	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00307	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate is valid JSON with only the requested today object, status planned matches the absence of any recorded activity for 2026-10-30, and the Gym session at 45 minutes, moderate, indoor with TSS 30 and FTP 220 follows the plan. The exercise list is well chosen for this athlete: elevated rack pulls replace floor deadlifts, goblet squats stay at 12 kg with the two-minute rest rule, split squats are capped at two sets, and lat pulldown, glute bridge, Pallof and plank are included, with the heart-rate gate below 110 bpm taken from the coach feedback. The rationale ties the session to the hip hinge, back durability and sit-bone goals, though the lean-muscle claim is loosely supported. Detail is good on sets, reps, rest and form cues but lacks explicit RPE or rep-in-reserve guidance and a clear stop rule beyond you can stop anytime, and the rest instructions are slightly inconsistent (90-120 s versus two minutes before set three). Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

```

```
    "bikeWorkout": null,
    "description": "Gym session B of the week (rainy, 7-10 °C day — indoors regardless). Warm-up: 5 min easy bike or rower plus 10 bodyweight squats, leg swings and 10 slow cat-cow. Main circuit, 90-120 s rest between all sets, waiting until your heart rate drops below 110 bpm before lifting: (1) Knee-height rack pulls or trap-bar pulls from knee-height blocks: 3 x 8 at a light, controlled load you can stop anytime — flat back, drive through the hips, no rounding; (2) Goblet squat: 3 x 10 at 12 kg, full 2 min rest before the third set until the late-set quad burn fades; (3) Bodyweight split squat: 2 x 8 per leg, holding a support for balance; (4) Lat pulldown: 3 x 10 at 40-50 kg; (5) Loaded glute bridge: 3 x 12; (6) Pallof press: 3 x 10 per side; (7) Plank: 3 x 30 s. Finish with your unrecorded 8-minute hip and spine mobility circuit (couch stretch, standing forward fold, 90/90 rotations, deep squat hold, supine figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session is one of only two strength exposures in the week, and it is the one that rebuilds the hip hinge you lost when you dropped deadlifts for your back. The elevated rack pulls train the exact posterior-chain and erector pattern that currently aches on long climbs and after crouching carpentry work, while the split squats and glute bridges give the sit-bone and lower-back support that stops the blisters and back pain on 200-1200 km rides. Skipping it costs you the progressive overload that carries your posture and back durability into the spring brevet series and PBP, and it removes the lean-muscle stimulus that supports your 24.6% to 15% body-fat goal."
  }
}
```

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Re-entry Gym Strength B — the second session of your 2-day strength split, built around grooving a safe, flat-back hip hinge. Warm up 6 minutes on the rower or an exercise bike at easy effort (heart rate drifting up to ~100–110 bpm), plus leg swings, hip circles and 8 slow bodyweight squats. Main work: (1) Trap-bar or barbell rack pulls from knee height — 3 × 10 with a light load (empty bar or ~20–30 kg total; this is technique practice, not effort): brace, push your hips back with a flat back to the bar, and stand tall; rest 90–120 seconds between sets and only start the next set once your heart rate is below 110 bpm. (2) Bodyweight split squats — 2 × 8 per leg at a controlled 2-1-2 tempo, tall torso, no added load
```

```
while your quads finish adapting from Tuesday. (3) Dumbbell bench press or push-ups — 3 × 10 at a moderate
load leaving 3–4 reps in reserve. (4) Core, 2 rounds: side plank 25 s per side + bird-dog 8 per side, moving
smoothly between them. Keep the whole session easy-moderate: roughly 100–110 bpm average with lift peaks no
higher than Tuesday's ~140 bpm, and no rushing between stations. Finish with your unrecorded 8-minute
hip/spine mobility circuit (90 s each: couch stretch or low lunge, standing forward fold with soft knees,
90/90 hip rotations, deep squat hold with heels down, supine figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the flat-back hip-hinge motor pattern under minimal spinal
load — the specific adaptation that gates every later posterior-chain progression toward loaded squats and
deadlifts without re-irritating your back — plus single-leg strength and knee stability that support both a
durable pedal stroke and your 5K build. It is the second of the week's two gym sessions inside the 5.0–5.5-
hour Week 1 target and directly serves the block's focus of restoring core and hip strength for a pain-free,
lower-back-friendly cycling position ahead of Paris-Brest-Paris. Skip it and you lose a full week of hinge
progression — the one movement gate standing between you and loaded posterior-chain work this winter — and
you halve the weekly strength stimulus behind your core/flexibility goal. If something truly intervenes,
keep at least the rack pulls and split squats (~25 minutes) so the hinge groove stays alive."
  }
}

    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "45-minute moderate-intensity gym strength session focused on safe hip hinge progression,
core stability, and balanced lower-body/upper-body strength to support your fat loss, back health, and
cycling posture goals. Follow this structure exactly:\n1. Warm-up (5 min): Easy treadmill walk or SkiErg at
<120 bpm + dynamic mobility (cat-cow x 10, bodyweight squats x 10, front/side leg swings x 10 per leg) to
```

```
loosen hips and spine.\n2. Elevated knee-height rack pulls (or trap-bar pulls, if available): 3 sets of 8
reps, starting with an empty bar or 20 kg total load. Cues: keep a flat neutral back, hinge at the hips,
keep the bar close to your legs, and avoid rounding your lower back. Rest 90–120 seconds between sets, and
wait until your heart rate drops below 110 bpm before starting the next set to protect your back.\n3.
Bodyweight split squats: 2 sets of 10 reps per leg. Cues: keep your front knee aligned over your ankle,
torso upright, and avoid leaning forward to reduce quad strain as you recover from Tuesday's goblet squats.
Rest 90 seconds between sets.\n4. Weighted glute bridges: 3 sets of 12 reps (use a 12 kg dumbbell on your
hips if the bodyweight version feels easy). Cues: squeeze your glutes fully at the top of each rep, and
avoid arching your lower back. Rest 60 seconds between sets.\n5. Single-arm dumbbell rows: 3 sets of 10 reps
per arm (start with 10–15 kg dumbbells, adjust as needed). Cues: keep your back flat, pull your elbow toward
your hip, and squeeze your shoulder blade at the top. Rest 60 seconds between sets.\n6. Pallof press (cable
or resistance band): 3 sets of 10 reps per side. Cues: brace your core tightly, resist rotation, and keep
your torso still. Rest 60 seconds between sets.\n7. Plank: 3 sets of 30 seconds. Cues: maintain a neutral
spine, engage your core and glutes, and avoid sagging or hiking your hips. Rest 45 seconds between sets.\n8.
Cool-down (3 min): Quick hip mobility flow (90/90 hold x 30 sec per side, supine figure-4 stretch x 30 sec
per side, couch stretch x 30 sec per side) to tie into your daily mobility routine.\nFocus on controlled
form throughout, and stop any exercise that causes sharp lower-back pain immediately.",
    "optional": false,
    "optionalRationale": "This session builds foundational posterior-chain and core stability strength that
directly reduces lower back pain on long cycling climbs and sit-bone discomfort from your upright riding
posture, while preserving lean muscle mass to support steady, sustainable fat loss. It is a core component
of this week's multimodal re-entry, safely progressing your hip hinge pattern with elevated rack pulls to
avoid the back injury you’re prone to. Skipping this session would delay the strength adaptations needed to
eliminate cycling-related back and saddle pain, slow core stability gains that support both your 5K running
and long-distance randonneur goals, and reduce the metabolic benefit of strength training for fat loss this
week."
  }
}

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00301	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate returns only the requested today object with valid enum values, the correct date, a planned status, a 45-minute moderate outdoor-false gym session and the plan's 30 TSS and 220 W FTP, so fidelity is strong. The prescription is specific and safe: elevated rack or trap-bar pulls with a flat-back cue, two bodyweight split-squat sets, Pallof presses, planks, glute bridges, rest periods tied to the sub-110 bpm rule and a stated 40 kg starting-load assumption. The rationale is grounded in Tuesday's goblet-squat tolerance and the lower-back goal, though the optionalRationale leans somewhat toward generic consequence language. Detail includes stop conditions and an explicit load assumption, but it does not give a fallback if the gym equipment is unavailable. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B, 45 min. Warm-up 8 min: cat-cow, 90/90 hip rotations, glute bridges, easy bodyweight squats. Elevated knee-height rack or trap-bar pulls 3x8 at a light load (assume ~40 kg to start; choose a weight that keeps a perfectly flat back and stop the set if the low back rounds), resting 90-120 s
```

```
so heart rate drops below 110 bpm before each set. Bodyweight split squats 2x8-10 per side, held to two
controlled sets to keep quads fresh after Tuesday's goblet squats. Pallof press 3x10 per side, plank 3x30 s,
and glute bridge 3x12 for anti-rotation core and posterior-chain stability. Finish with the daily 8-min
hip/spine mobility circuit (couch stretch/low lunge, standing forward fold with soft knees, 90/90 rotations,
deep-squat hold, supine figure-4, cat-cow). No floor deadlifts or heavy squats today.",
    "rationale": "Friday's Strength B is the second gym session of Week 1 in the Autumn Re-Entry block and
the safe hinge progression your lower back needs: after Tuesday's clean Gym Strength A (all three 12 kg
goblet-squat sets with only manageable quad burn, 102 bpm average, recoveries into the 70s-80s) and
Wednesday's easy run/walk and row, you are fresh enough to rebuild the hip hinge from a knee-height
rack/trap-bar elevation instead of floor deadlifts your back cannot yet tolerate, while two controlled
bodyweight split-squat sets keep your quads adapting without overload. Pallof presses and planks build the
anti-rotation core stability that directly fights your lower-back pain on long climbs and the upright, sit-
bone-heavy riding position, and the 90-120 s rests keep heart rate below 110 bpm so the session stays
moderate and does not trigger the evening hunger spikes that undermine your fat-loss goal. It fits the
week's 5.0-5.5 h target load and the block's daily-mobility-plus-conservative-strength foundation.",
    "optional": false,
    "optionalRationale": "Skipping it would halve this week's strength stimulus and stall the elevated hip-
hinge progression that protects your lower back on long climbs and in a more aerodynamic posture, and you
would lose the Pallof/plank anti-rotation durability that keeps your spine stable during crouching carpentry
work and multi-hour rides — weakening the block's core-and-mobility foundation and the week's 5.0-5.5 h
target load toward your fat-loss, back-pain-free, and long-ride goals."
  }

Hard gates: the response never mentions Atlas

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.5/2 · Design 0.5/3 · Rationale 0.9/2 · Grounding 1.0/2 · Detail 0.4/2

Combined judgment: Today plan: The candidate correctly keeps the date, planned status, moderate 45-minute gym workout, non-outdoor flag and 30 TSS from the plan, and the JSON shape is valid. However, the description gives no exercise list, sets, reps, rest periods, or load guidance, even though the athlete asked for very specific strength workouts and the plan specifies goblet squats, rack pulls and split squats at fixed set counts. The optionalRationale mentions Paris-Brest-Paris and posterior chain but misses the fat-loss and hip-flexibility goals and does not state a concrete loss tied to the block focus. The estimatedTss and FTP are consistent with the plan but the rationale is thin. Season revision: The answer fails the hard requirements: Atlas is never mentioned in the season, blocks, week, or today, and the season goal still reads as the April 200 km brevet. Block 1 is essentially the supplied block with minor wording changes, so it is not genuinely changed, though its start date of 2026-10-21 is kept. The season blocks are unchanged, so the Atlas, Paris-Brest-Paris and survey adjustments are ignored. The week and today sessions are coherent, the tomorrow and next items stay null, and FTP and TSS are consistent, but the bodyMetrics entry adds a null-only record rather than an empty array. Hard gates failed: the response never mentions Atlas.

FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, has only the requested today object, and matches the date, planned status, moderate 45-minute gym workout, non-outdoor flag, and null bikeWorkout from the plan. The exercise list follows the week's intent: elevated hinge, two split-squat sets, lat pulldowns, Pallof press, and a regressed plank, with sensible rest and RPE guidance and a stop rule for back discomfort. Weaknesses are that the rack pull load is left as light without a concrete starting number, and the rationale, while specific, does not reference the athlete's recent heart-rate and quad-burn feedback in detail. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps Friday 2026-10-30 as a planned 45-minute moderate indoor gym session with the planned 30 TSS, FTP 220 W, and canBeOutdoor and outdoor flags set correctly for a gym session. The exercise list is specific, with sets, reps, RPE, rest, a heart-rate restart cue, and a stop-on-back-pain rule, and it respects the 2-set split squat cap and the elevated hinge change. Weaknesses are that no loads are given for the pulls, pulldowns, or Pallofs even though the athlete's recent loads (12 kg goblet, 50 kg lat pulldown) were available, and the description does not state a load assumption, which limits execution detail. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Warm-up (6 min): 3 min easy SkiErg or brisk incline walk, 10 bodyweight squats, 10 slow broomstick hip hinges, 8 cat-cow reps, 10 glute bridges. Main work — take a full 90-120 s rest between sets so your heart rate drops below 110 bpm before each hinge and split-squat set: (1) Elevated knee-height rack
```

```
or trap-bar pulls, 3 x 8 reps at a conservative load (start around 40 kg and only add weight if your back stays perfectly flat), pushing the hips back and squeezing the glutes at the top; stop the set immediately if you feel any lower-back tightness. (2) Bodyweight split squats, 2 x 8-10 per leg, hands on a rack for balance if needed, keeping these to just two sets so your quads stay fresh after Tuesday's lifting. (3) Seated cable row, 3 x 10 at a moderate weight (around 40 kg), tall chest and controlled return. (4) Pallof press, 3 x 10 per side, slow and steady. (5) Plank, 2 x 30-45 s. Cool down with your daily 8-minute hip and spine mobility circuit. Keep your average heart rate in the 100-115 bpm range throughout.",
    "optional": false,
    "optionalRationale": "This is one of only two strength sessions this week and the key step in the block's safe hinge progression: the elevated knee-height pulls rebuild the flat-back hip-hinge pattern that protects your easily-injured lower back, while the split squats lay down the single-leg strength that will support your 5K running progression and stable, ache-free pedaling on long climbs. Skip it and you delay the posterior-chain base you need before heavier winter lifting and longer rides — the very strength that will let you hold a lower, more sustainable position on the bike and eliminate the sit-bone blisters and back ache that have limited your long rides toward the 200 km brevet and PBP."
  }
}

FAIL	$0.00302	anthropic/claude-haiku-5.5

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned gym session with the matching date, duration, moderate intensity, indoor flag and TSS, and its exercise selection follows the weekly constraints: elevated pulls replace floor deadlifts, split squats are capped at two sets, and rest and heart-rate guidance reflect the coach replies. Execution detail is strong, with tempos, cues, a stated load assumption for the pulls and a cool-down. The rationale is specific but overstates the case by calling this the only hinge-pattern session, when Tuesday's glute bridges also train the hinge, and the description is dense and lacks explicit RPE or stop conditions. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Your second gym session of Week 1 (45 min) introduces the safe hip-hinge progression
that replaces floor deadlifts. Warm-up (6–8 min): 3–4 min easy spin on a gym bike or brisk walk, then leg
swings, hip circles, and cat-cow. Main work, taking the full 90–120 s rest between sets so your heart rate
drops below 110 bpm before each set: (1) Elevated knee-height rack pulls or trap-bar pulls — 3 x 8 reps,
starting light (around 40–60 kg), flat back, hips pushing back, squeezing glutes at the top; this rebuilds
posterior-chain strength without the injury risk of floor deadlifts or good mornings, and only add weight
```

```
once the hinge feels crisp. (2) Bodyweight split squats — 2 x 8 per leg at a controlled 2-seconds-down
tempo, holding a rack for balance if needed; two sets only, to keep your quads fresh after Tuesday's goblet
squats. (3) Seated cable row — 3 x 10–12 at a moderate weight, tall chest, pulling to the lower ribs. (4)
Pallof press — 3 x 10 per side, resisting rotation. (5) Plank — 2 x 30–45 s. Cool-down (5 min): gentle
stretching, then your daily 8-minute hip/spine mobility circuit at home. Keep every set controlled and
moderate — the goal is hinge mechanics and back-safe strength, not fatigue. A protein-rich afternoon snack
before the session helps you keep dinner moderate afterward.",
    "optional": false,
    "optionalRationale": "This is the week's only hinge-pattern strength session and the cornerstone of your
core-strength goal: the elevated pulls rebuild the posterior chain and hip-hinge pattern that will end the
lower-back ache on long climbs and in crouching carpentry work, and eventually let you hold a lower, more
aerodynamic cycling position without sit-bone blisters on long brevets. Skipping it cuts the week's strength
stimulus in half, stalls the safe progression toward heavier pulls in Weeks 2–4, and leaves your back less
protected for Saturday's 2-hour hike — a real cost toward the 200 km brevet in April and Paris-Brest-Paris
in 2027, not a session you can quietly drop."
  }
}

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response is clean JSON with only the today object, correct date, planned status since no activity exists for today, a moderate 45-minute gym workout, outdoor false, canBeOutdoor false and bikeWorkout null, all consistent with the plan. The exercise list follows the Gym Strength B direction (elevated hinge pulls, two split-squat sets, core and glute work) with explicit sets, reps, rest and a heart-rate gate, which suits this athlete's wish for specific gym prescriptions. Weaknesses are the lack of load guidance for the rack pulls and the unclear structure, where three rounds are stated but the sets are listed per exercise, plus no explicit stop condition for back symptoms and a shortened cool-down compared with the daily eight-minute mobility routine. The rationale is specific to the back, sit-bone and race goals but does not reference the week's target load. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

5.4/12.5

OpenAI: GPT-4o-mini (2024-07-18)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	26.8 s	$0.00401	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00584	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.4/2 · Design 0.5/3 · Rationale 0.2/2 · Grounding 0.8/2 · Detail 0.5/2

Combined judgment: Today plan: The JSON is valid, has only the today object, and matches the planned Friday Gym Strength B: date, 45 minutes, moderate intensity, indoor, TSS 30, and FTP 220 W are all correct. The description is too thin for an athlete who asked for exact exercises, sets, and reps: it names only the elevated pulls and split squats without sets, reps, loads, or a rest interval number. The optionalRationale is empty even though the session is required and must state the concrete adaptation it builds and what is lost by skipping, so the rationale is missing entirely. Season revision: The JSON has the eight required top-level keys and seven current-week sessions, and block 1 keeps the 2026-10-21 start. However, the season is not re-planned: its blocks array contains only block 1, so the Atlas build, the April brevet series, the Paris-Brest-Paris block and the taper through 2027-04-04 are missing and the season does not tile. Atlas appears only in the season goal text; the block, week and today rationales never prepare for it, and block 1 is essentially unchanged from the supplied version apart from rationale wording. The candidate also fills tomorrow with a copy of today's run even though the input supplied it as null, and marks today's planned run as completed although no matching activity was recorded for that day. Hard gates failed: block 1 is unchanged.

{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and
low-load strength before introducing limited threshold work. The winter block preserves cycling while using
skiing and easy running for cross-training durability. The build phase then progresses sustained power and
long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load.
The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The three-hour race,
additional activity, strength and pole-vaulting session, controlled ride, and long hike produced roughly 587
TSS, so this was not the low-stress recovery week originally targeted. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean and matches the requested today object, and the session fits the planned Friday gym day as a 45-minute moderate indoor workout with the correct 30 TSS and 220 W FTP. The exercise choices respect the back constraints from the feedback, including knee-height pulls instead of floor deadlifts, two split-squat sets, and 90 to 120 seconds of rest to keep heart rate under 110 bpm. The rationale is reasonably specific to the hinge and cycling posture goals but leans somewhat on general benefits, and the description gives no explicit RPE or load guidance beyond an assumed 40 to 50 kg starting weight. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

RETURNED JSON

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B: Posterior Chain & Unilateral Legs",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B focuses on rebuilding your hip hinge safely and strengthening your posterior chain to protect your lower back and improve your cycling posture. Take 90–120 seconds rest between every working set so your heart rate drops below 110 bpm before the next set.\n\nWarm-up (5 min): Light rowing or bike ergometer for 3 min, then 2 min of dynamic hip swings and cat-cow spinal mobility.\n\n1. Elevated Rack Pulls or Trap-Bar Pulls (bar at knee height): 3 × 8–10 reps. Start light (40–50 kg trap-bar or empty barbell on rack pins at knee height). Focus on a flat back, pushing hips back to the
```

```
wall, and squeezing glutes at the top. If any lower-back rounding occurs, reduce the weight.\n\n2.
Bodyweight Split Squats: 2 × 8–10 reps per leg. Hold a stable support if needed for balance. Keep your torso
upright and front knee tracking over your toes. Descend controlled, pause briefly at the bottom, drive up
through the front heel.\n\n3. Loaded Glute Bridges: 3 × 10–12 reps. Use a barbell or dumbbell across your
hips. Squeeze glutes hard at the top for a full second; do not hyperextend your lower back.\n\n4. Pallof
Press: 3 × 10 reps per side. Use a cable or resistance band. Press out slowly, hold 2 seconds, return with
control. This builds the anti-rotation core stability your back needs on long rides and during manual
labor.\n\n5. Side Plank: 2 × 20–30 seconds per side. Keep hips stacked and lifted; this targets the lateral
core that stabilizes your pelvis in the saddle.\n\nCool-down (5 min): 90 seconds each of standing forward
fold (soft knees), couch stretch/low lunge with hips pushed forward, and supine figure-4 glute
stretch.\n\nAfter the session, complete your daily 8-minute hip and spine mobility circuit if not already
covered in the cool-down.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge pattern and posterior-chain strength that
will eventually let you handle heavier deadlifts and squats without back injury, and that directly supports
a more aerodynamic, pain-free cycling position on long rides and climbs. Skipping it delays the hinge
progression your back depends on and leaves your glutes and hamstrings undertrained for the weekend hike and
the months of cycling volume ahead."

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00287	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate returns only the required today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, TSS 30, FTP 220 and a null bikeWorkout, all consistent with the plan. The session follows the Week 1 Gym Strength B intent, with elevated pulls, two bodyweight split-squat sets, anti-rotation core work and the mobility circuit, and it gives explicit sets, reps and rest. Weaknesses are the vague load guidance ('light load' with no kg starting point or progression rule) and the rationale, which is sound but leans on general back-protection language rather than the specific week-level targets. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean and the today object matches the planned 2026-10-30 gym session in type, intensity, duration, indoor flag and TSS, with a sensible hinge, split-squat, pull and core structure that respects the back-safety constraints and the heart-rate ceiling. The description is weakened by duplication: split squats appear once as eight per side in a warm-up and again as two sets of eight per side in the working block, which makes the sequence ambiguous. The rationale is specific to the fat-loss, back-protection and PBP goals and explains what is lost by skipping, though it leans on the plan's load figures rather than the athlete's recent gym feedback, and the rep and RPE guidance is otherwise detailed and execution-ready. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 220 W FTP and a 30 TSS that match the plan's Friday gym session. The exercise selection follows the block's hinge progression, with knee-height pulls, two split-squat sets, 12 kg goblet squats and the 110 bpm rest cap from the coach analysis. The main weakness is that the listed volume with 90 to 120 second rests across six exercises and 3 sets each likely exceeds the 45-minute target, and the description gives no load progression for the pulls or a stop rule if quad burn returns. The rationale is specific to the lower-back and saddle problems but does not say what is lost by skipping beyond general consolidation. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

OpenAI: GPT-5.4 Nano

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	15.6 s	$0.00822	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00552	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.5/2 · Design 0.6/3 · Rationale 0.2/2 · Grounding 0.7/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is valid and keeps the requested today shape, with the correct date, workout type, moderate intensity, 45 minutes, indoor flag and FTP. However, it marks today as completed even though no activity dated 2026-10-30 is recorded, which contradicts the planned session and invents a completed workout. The optionalRationale is empty despite optional being false, so the required purpose and cost-of-skipping explanation is missing. The description gives some useful cues (90-120 s rest, flat back, stop rule, mobility finish) but omits the specific exercises, sets and reps the athlete explicitly asked for in strength training. Season revision: The response is valid JSON with the required keys, seven week sessions, and today matching the 2026-11-01 session, and it keeps block 1 starting on 2026-10-21 with the earlier-week data grounded in the supplied activities. However, it fails the core revision: the season contains only the original block 1 and does not re-plan the remainder through 2027-04-04, so the Atlas Mountain Race, Paris-Brest-Paris, and the brevet series are not tiled into the season. The block name, focus, and rationale are essentially unchanged, and neither the block nor the week names or prepares for Atlas, so the survey adjustment about the new goal is effectively ignored apart from a sentence in the season goal.

    "description": "45-minute conservative gym strength session. Warm up 5 min on an easy bike or rower, then do dynamic hip circles, leg swings, and cat-cow. Main strength work with 90-120 s rest between sets and heart rate back below 110 bpm before each set: (1) elevated knee-height rack/trap-bar pull 3 x 8, light
```

```
enough to keep a flat back and no rounding; (2) bodyweight split squat 2 x 8 per leg, controlled depth; (3)
single-leg glute bridge 2 x 10 per leg, ribs down; (4) incline push-up 3 x 10; (5) half-kneeling Pallof
press 2 x 10 per side, resisting rotation; (6) dead bug 2 x 6 per side, slow and controlled. Finish with the
8-minute hip/spine mobility circuit: couch stretch or low lunge, standing forward fold with soft knees,
90/90 hip rotations, deep-squat hold, supine figure-4, and cat-cow. This session is the week's posterior-
chain and core dose, using safe elevated hinge mechanics instead of floor deadlifts or heavy squats to
rebuild back and hip durability for long rides while supporting fat loss.",
    "optional": false,
    "optionalRationale": "This is the week's second conservative strength stimulus in the Autumn Re-Entry
block: it builds the safe hip-hinge pattern, single-leg stability, and anti-extension core that keep your
spine neutral and reduce sit-bone pressure on long rides, while preserving lean mass during fat loss.
Skipping it would leave this week's 5.0-5.5 h target short of its planned strength dose and delay the back
and hip durability you need for the April 200 km brevet and Paris-Brest-Pais, so it is not optional."
  }
}
```

FAIL	$0.00299	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response is clean valid JSON with the requested today object, the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, TSS 30, FTP 220 and a null bikeWorkout, matching the current plan. Its exercise selection is specific with sets, reps, rest and a heart-rate-before-set cue drawn from the athlete's feedback. It conflicts with the coach's stated cap of two bodyweight split-squat sets by prescribing 2x8-10 per leg (4 sets total), and it adds bench press and rows the plan did not name. The rationale ties the session to posterior-chain strength and saddle pressure but says little about the fat-loss goal or what is lost in calorie-burn terms, and the description lacks explicit stop conditions or fallbacks for back pain. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00254	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid with the exact today shape, status planned matches the unrecorded session, and the 45-minute moderate gym workout with outdoor false and canBeOutdoor false fits the plan and the rainy forecast. The exercise prescription is specific and uses the coach's elevated-hinge modification, with rest and heart-rate guidance, though it drops the goblet squat and includes some extra items not in the plan. The rationale ties well to back pain and cycling posture, but it does not reference the 2-hour weekend cap or the week's load target, and the description's 'rebuilding' framing is slightly generic. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

TODAY PLAN

10.1/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
45.1 s	$0.00886	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.7/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Judgment: The JSON is valid with the exact today shape, status planned matches the unrecorded session, and the 45-minute moderate gym workout with outdoor false and canBeOutdoor false fits the plan and the rainy forecast. The exercise prescription is specific and uses the coach's elevated-hinge modification, with rest and heart-rate guidance, though it drops the goblet squat and includes some extra items not in the plan. The rationale ties well to back pain and cycling posture, but it does not reference the 2-hour weekend cap or the week's load target, and the description's 'rebuilding' framing is slightly generic.

RETURNED JSON

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Today's Gym Strength B completes the second half of your Week 1 strength split, targeting the posterior chain and single-leg stability that your lower back and cycling posture urgently need. After a 5-minute warm-up (light row or bike plus leg swings and cat-cow), perform elevated knee-height rack pulls or trap-bar deadlifts for 3 sets of 8–10 reps with a light-to-moderate load, focusing on a flat-back hip hinge and taking a full 90–120 seconds of rest between sets so your heart rate drops below 110 bpm. Then complete 2 controlled sets of bodyweight split squats (8–10 reps per leg) to build quad and glute
```

```
stability without overloading your legs. Finish with single-leg glute bridges (2×10/leg), Pallof presses
(3×10/side), and dead bugs (3×8/side) for anti-rotation core stability, followed by a 5-minute cool-down
stretch (hip flexor, hamstring, spinal twist). Keep your heart rate below 135 bpm throughout and take full
rest between sets—this is about rebuilding movement quality, not grinding. Complete your daily 8-minute hip
and spine mobility circuit afterward.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain hip hinge durability and single-leg
stability that directly address your lower-back injury risk and cycling posture issues. If you skip it, you
lose the second weekly strength stimulus needed to rebuild glute and hamstring resilience that keeps your
back pain-free on long rides, and you maintain the strength imbalance that contributes to your upright
cycling position and sit-bone discomfort."
  }
}
```

FAIL	$0.00255	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response is valid JSON with the requested today object and correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and null bikeWorkout, matching the current week plan for Friday Gym Strength B. The exercise prescription is specific with sets, reps, rest and reserve cues and respects the capped split squats and knee-height pulls, though it omits the goblet squat and does not explicitly address the athlete's stated 135 to 150 bpm heart rate guidance for gym work. The rationale is grounded in back protection and hunger-neutral intensity, but it claims the session fits the 5.0 to 5.5 hour load and says it cannot be skipped without a clear, somewhat generic loss. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 0.4/2 · Design 0.8/3 · Rationale 0.2/2 · Grounding 0.7/2 · Detail 0.3/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned Friday gym session on 2026-10-30 with the correct moderate intensity, 45 minutes, 30 TSS, 220 W FTP and indoor flags. The description is a single sentence that only restates the plan's focus, with no exercises, sets, reps, loads, rest periods, RPE guidance or stop conditions, even though the athlete explicitly asked for very specific strength workouts. The optionalRationale is empty despite the prompt requiring a rationale for today's session, so the session's purpose against the fat-loss, hip-hinge and back-protection goals is never stated. Season revision: The response mentions Atlas only in the season goal text, while the season blocks, block name, focus and rationale never plan for Atlas or the Paris-Brest-Paris build, so the season was not really re-planned around the new goal and the required changed block 1 with Atlas preparation is missing. Block 1 keeps the old dates, name and structure and its rationale is meta-commentary about what changed, and the current week and today session were reused with the same run and status changed to completed although today was planned. The season also ends on 2027-04-04 with the old taper, dropping the August Paris-Brest-Paris and the Atlas date from the block structure. Strengths include valid JSON with the eight keys, the block starting on 2026-10-21, correct handling of nulls for tomorrow beyond the supplied null and empty bodyMetrics, and reasonable power-free outline sessions consistent with the 225 W FTP. Hard gates failed: block 1 is unchanged.

{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April.",
    "rationale": "The season remains unchanged from 2026-10-21 to 2027-04-04. Recent training supports a
conservative aerobic-first progression: the athlete responded well to controlled indoor riding and a
sustained hike, but the three-hour race at 187 bpm average HR and the additional pole-vaulting load show a
need to manage fatigue carefully. The first block therefore emphasizes aerobic consistency, cadence, and
low-load strength before introducing limited threshold work. The winter block preserves cycling while using
skiing and easy running for cross-training durability. The build phase then progresses sustained power and
long endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load.
The final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race
readiness.",

FAIL	$0.00259	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today's date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and null bikeWorkout, and carries FTP 220 W forward. The exercise set (knee-height pull, split squats, lat pulldown, Pallof press) follows the plan and the athlete's back-safety constraints, with RPE, rest and stop conditions given. Weaknesses: the description is very long and packed with mobility detail that duplicates the daily circuit, the lat pulldown and Pallof loads are not specified, the pulldown is listed as three sets while the plan calls for a session that also includes goblet squats omitted here, and the rationale is somewhat generic about fat loss rather than naming the concrete block target. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Indoor gym session, 45 minutes total including your daily 8-minute hip and spine
mobility circuit. Warm up for 5 minutes with easy exercise-bike pedaling or brisk treadmill walking at 115-
125 bpm, then do 10 slow cat-cow movements, 10 gentle 90/90 hip rocks per side, and 10 bodyweight glute
```

```
bridges. Main work: 1) Knee-height rack pull or trap-bar pull, 3 sets of 8 reps at RPE 6, starting at 30-40
kg total if using a barbell; take 120 seconds rest and begin the next set only when your heart rate is below
110 bpm. Keep a neutral spine, brace your ribs down, and stop the set if your lower back rounds. If the trap
bar or adjustable rack is not available, use dumbbells or kettlebells pulled to knee height with the same
hinge pattern. 2) Bodyweight split squat, 2 sets of 8 reps per leg, 90 seconds rest; hold a support if
needed, keep the torso tall, and stop if the quad burn becomes sharp rather than manageable. 3) Lat
pulldown, 3 sets of 10 reps at RPE 6, 90 seconds rest; use a weight you can control without shrugging or
rounding, supporting an upright cycling posture. 4) Pallof press, 3 sets of 10 reps per side, 45-60 seconds
rest; keep your hips and shoulders square and resist rotation. Finish with the 8-minute mobility circuit:
couch stretch or low lunge with hips pushed forward, standing forward fold with soft knees gradually
straightening, 90/90 hip rotations, deep squat hold with heels down, supine figure-4 glute stretch, and slow
cat-cow spinal movement.",
    "optional": false,
    "optionalRationale": "This session builds the hip-hinge strength, unilateral leg control, and anti-
rotation core stability that keep your pelvis steadier on the bike, reducing sit-bone pressure and lower-
back ache on long climbs. It also adds moderate full-body work that supports fat loss without the high
heart-rate spikes that tend to drive your evening hunger. Skipping it delays the posterior-chain and core
base you need before adding more running volume and longer winter endurance sessions, and leaves your back
less prepared for the 200 km brevet build."
  }
}

FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, with the correct date, planned status, moderate 45-minute gym workout, outdoor false, FTP 220 W and TSS 30 consistent with the plan. The description is thin for a fully detailed session: it names two split-squat sets and three elevated pull sets but gives no reps, load guidance, exercise list or stop conditions, which the athlete explicitly asked for. The rationale is grounded in the lower-back and hip-hinge history and the heart-rate recovery cue, though it is somewhat generic about what is lost by skipping. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): This endpoint's maximum context length is 32768 tokens. However, you requested about 45565 tokens (12797 of text input, 32768 in the output). Please reduce the length of either one, or use the context-compression plugin to compress your prompt automatically.. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

    "description": "Purpose: continue the Autumn Re-Entry by reinforcing a back-safe hip hinge and building hip/hamstring strength, while protecting your lower back. This session targets posterior-chain stability and
```

```
reinforces movement quality with a conservative loading plan that aligns with Week 1 Gym Strength B. Main
goal today is to support fat loss by maintaining strength and mobility without provoking back pain, so we
keep loads controlled and rest periods sufficient for technical focus rather than maximal effort. \n\nWarm-
up (5 minutes): dynamic hip hinge prep, glute activation (glute bridges to light bridge hold), leg swings
(forward/backward and lateral), and light band pulls for upper back. \n\nMain sets: \n- Elevated knee-height
rack pulls: 3 sets x 6 reps at a light-moderate load (target roughly 60–70% of your perceived 1RM), tempo
about 2 seconds up, 1-second pause, 2 seconds down. Rest 90–120 seconds between sets. \n- Split squats
(bodyweight): 2 sets x 8 reps per leg; controlled tempo with emphasis on knee alignment; rest 90 seconds
between sets. \n\nAccessory work: \n- Glute bridges: 2 x 12 reps; drive hips through with a slow, controlled
tempo. \n- Pallof press: 3 x 10 per side; anti-rotation to protect the spine. \n- Plank: 2 x 30 seconds;
brace core and keep hips level. \n\nCool-down (2–3 minutes): hamstring and hip-flexor stretches, gentle
thoracic and hip mobility work. \n\nNotes: Maintain a flat back on hinge movements; if you feel back
fatigue, reduce rack-pull load or substitute with a lighter hip-hinge pattern. Hydration and a protein-rich
snack after training will support recovery and appetite regulation. This session reinforces posture and
stability to support long rides and daily activities, contributing to your fat-loss and back-health goals
without overloading the spine.",

Contract 1.5/1.5 · Fidelity 2.0/2 · Design 2.4/3 · Rationale 0.6/2 · Grounding 1.6/2 · Detail 1.2/2

Judgment: The candidate returns a clean single today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 220 W FTP and 30 TSS, matching the week outline for Friday's gym session. The exercise selection and sets follow the block's safe-hinge progression with 90-120 second rests, and the description ties the work to the lower-back and sit-bone problems. However, optionalRationale is left empty even though the prompt requires it to name the adaptation and the loss from skipping, and the description gives no load guidance, RPE or stop conditions for the lifts.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is clean and matches the requested today object, with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, null bikeWorkout and the 220 W FTP and 30 TSS from the plan. The session is grounded in the current week plan, using knee-height rack or trap-bar pulls, two bodyweight split-squat sets and the 90 to 120 second rest with a heart rate target from the coach notes. However, optionalRationale is left empty even though the prompt requires it to name the adaptation and the loss from skipping; that purpose is only partly covered in the description. The prescription also omits warm-up, load guidance, stop conditions and the goblet squat and core work that fill the 45-minute slot. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): empty response content. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): unexpected top-level keys: bodyMetrics. Season revision: The response is valid JSON with the required keys, seven week sessions, block 1 starting on 2026-10-21, contiguous season blocks, and null tomorrow, nextWeek and nextBlock. It names Atlas in the season goal, the Pre-Atlas block name and the block rationale. However, block 1 is essentially unchanged apart from its rationale, so the current block is not meaningfully redesigned for Atlas. The season drops the April 200 km brevet series from any block, leaves no taper before the 28 February Atlas race (block 3 runs to the race day), and the week's rationale still reads partly as commentary on the previous plan.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned indoor gym workout on 2026-10-30 with the right moderate intensity, 45 minutes, and 30 TSS, and it avoids inventing a completed activity. However, the description is generic and gives no exercise list, sets, reps, rest periods, or load guidance, even though the athlete explicitly asked for very specific strength workouts and the plan specifies goblet squats, trap-bar pulls and two split-squat sets. The rationale is reasonably tied to back and hip goals but does not reference the Week 1 target load or what is lost in the cadence of the block, and the description does not mention the 90 to 120 second rest rule or heart rate ceiling the coach has been repeatedly setting. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): missing top-level keys: today; missing today object. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Mentions Atlas FAIL	Block 1 changed FAIL	Block 1 starts 2026-10-21 FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned gym session on 2026-10-30 with correct status, type, intensity, duration, indoor flag and FTP. The description, however, only restates the outline with no exercises, sets, reps, rest periods, heart-rate cues or stop conditions, even though the athlete asked for very specific strength prescriptions and the coach feedback gave concrete rest and heart-rate guidance. The rationale is reasonably tied to the lower-back and posture goals, but the execution detail is thin. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): empty response content. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Mentions Atlas FAIL	Block 1 changed FAIL	Block 1 starts 2026-10-21 FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned date, gym session, moderate intensity, 45 minutes, 30 TSS, 220 W FTP and null bikeWorkout. The description is the main weakness: it names the elevated pulls and split squats but gives no exercises, sets, reps, loads, or rest periods, despite the athlete asking for very specific strength prescriptions. The rationale ties the session to the block's hip-hinge and back-protection goals, but it does not state a concrete loss from skipping beyond generic language about foundation and fat loss. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): season: block 1: missing field: weekCount; season: block 2: missing field: weekCount; season: block 3: missing field: weekCount; season: block 4: missing field: weekCount; season: block 5: missing field: weekCount; block: missing field: rationale; week: session 1: missing field: outdoor; week: session 1: missing field: canBeOutdoor; week: session 1: missing field: bikeWorkout; week: session 1: missing field: estimatedFtpWatts; week: session 2: missing field: outdoor; week: session 2: missing field: canBeOutdoor; week: session 2: missing field: bikeWorkout; week: session 2: missing field: estimatedFtpWatts; week: session 3: missing field: outdoor; week: session 3: missing field: canBeOutdoor; week: session 3: missing field: bikeWorkout; week: session 3: missing field: estimatedFtpWatts; week: session 4: missing field: outdoor; week: session 4: missing field: canBeOutdoor; week: session 4: missing field: bikeWorkout; week: session 4: missing field: estimatedFtpWatts; week: session 5: missing field: outdoor; week: session 5: missing field: canBeOutdoor; week: session 5: missing field: bikeWorkout; week: session 5: missing field: estimatedFtpWatts; week: session 6: missing field: outdoor; week: session 6: missing field: canBeOutdoor; week: session 6: missing field: bikeWorkout; week: session 6: missing field: estimatedFtpWatts; week: session 7: missing field: outdoor; week: session 7: missing field: canBeOutdoor; week: session 7: missing field: bikeWorkout; week: session 7: missing field: estimatedFtpWatts. FAIL	$0.00313	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): today: type must be one of workout, rest; today: intensity must be one of easy, moderate, hard, rest; today: status must be one of completed, partial, planned, missed, rest; today date must be 2026-10-30. Season revision: The JSON has the eight required keys, block 1 starts on 2026-10-21, the later blocks tile the season, the seven-session week and today match, and the Atlas Mountain Race is named in the season goal and rationale, so the mechanical checks pass. However, the season was essentially not re-planned: the blocks, end date of 2027-04-04 and taper are the old brevet-only shape, Paris-Brest-Paris in August 2027 is absent, and no block or week is built toward the 28 February Atlas date. The current block and week are almost unchanged apart from a rationale edit, and the block plan never names Atlas, so the Atlas adaptation is weak. Hard gates failed: block 1 is unchanged.

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned indoor gym session dated 2026-10-30 with the planned 45-minute moderate duration, TSS 30 and FTP 220 W, and uses the required status and enum values. The exercise list reflects the athlete's progression (3 goblet squat sets at 12 kg, trap-bar pulls instead of floor deadlifts, 2 split squat sets) and the 90-120 s rest and HR cap from coach feedback, but it omits sets and reps for split squats and pulls detail, gives no load progression or stop conditions for back pain, and lacks the daily mobility circuit. The optionalRationale is empty and the rationale for why this session matters toward the fat-loss and back-strength goals is missing, which is a clear weakness since the schema requires a rationale for today's session. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): timed out after 300s. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned, indoor gym workout of 45 minutes at moderate intensity with the right date, FTP and TSS, and it reuses the weekly plan's elevated pull and split-squat content. However, it gives no exercise list, sets, reps or loads, despite the athlete explicitly asking for very specific strength workouts, and the description is largely generic. The optionalRationale is empty even though optional is false, and the rationale field is missing its purpose statement, so the skip cost to the fat-loss and back-resilience goals is never stated. It also omits the daily 8-minute mobility routine that the coach has said must be listed on every day. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): today: optionalRationale must be a string. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, has the requested single today object, and correctly keeps the 2026-10-30 date, 45-minute moderate gym workout, 220 W FTP and a 30 TSS estimate. The main failure is status set to completed, even though no activity is recorded for today (the latest recorded session is 2026-10-28), so the candidate invents a completed session. The description also just repeats the earlier coach text and never prescribes the specific exercises, sets, reps and loads the athlete asked for in strength training, so design and detail are thin. The rationale is reasonably tied to back health and long-distance goals but is somewhat generic and does not clearly name what is lost by skipping. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): week: session 1: missing field: bikeWorkout; week: session 2: missing field: bikeWorkout; week: session 3: missing field: bikeWorkout; week: session 4: missing field: bikeWorkout; week: session 5: missing field: bikeWorkout; week: session 6: missing field: bikeWorkout; week: session 7: missing field: bikeWorkout; today: missing field: alternatives; today: missing field: bikeWorkout. Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): no parseable JSON object in response. Season revision: The output is valid JSON with the eight keys, keeps block 1 starting on 2026-10-21, tiles the season contiguously, and names Atlas in the goal and block text. However, the season places the Atlas Race Preparation block in April to June 2027, after the 28 February race, and gives Atlas no taper or recovery before it, which breaks the chronological logic of the new goal. The candidate also marks today's 2026-11-01 run as completed with an invented note that it went as planned, although no activity was recorded, and it populates tomorrow even though the supplied tomorrow was null. Several rationales are meta-commentary about what changed, such as the block now acknowledging the 4-month limit, and the tomorrow interval durations total 75 minutes against a stated 60.

SEASON REVISION

5.7/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
111.6 s	$0.00359	no	yes	200	stop

Contract 1.2/1.5 · Fidelity 0.6/2 · Design 1.0/3 · Rationale 1.0/2 · Grounding 0.6/2 · Detail 1.3/2

Judgment: The output is valid JSON with the eight keys, keeps block 1 starting on 2026-10-21, tiles the season contiguously, and names Atlas in the goal and block text. However, the season places the Atlas Race Preparation block in April to June 2027, after the 28 February race, and gives Atlas no taper or recovery before it, which breaks the chronological logic of the new goal. The candidate also marks today's 2026-11-01 run as completed with an invented note that it went as planned, although no activity was recorded, and it populates tomorrow even though the supplied tomorrow was null. Several rationales are meta-commentary about what changed, such as the block now acknowledging the 4-month limit, and the tomorrow interval durations total 75 minutes against a stated 60.

RETURNED JSON

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, with durable aerobic endurance, efficient climbing cadence, and strength to handle mountainous terrain. Following this, prepare for Paris-Brest-Paris in August 2027 by maintaining cycling-specific endurance and strength, while also ensuring the ability to comfortably finish a randonneur brevet series (starting with a 200 km event in April 2027). Address the historical challenge of sustaining disciplined training beyond 4 months by structuring the season with clear deloads and progressive, manageable blocks.",
    "rationale": "The season now reflects three key goals: the Atlas Mountain Race (February 2027), the 200 km brevet (April 2027), and Paris-Brest-Paris (August 2027). The Atlas race demands high-altitude endurance and climbing efficiency, while the brevet series requires sustained pacing and durability. Paris-Brest-Paris will build on the endurance base established earlier. The season is structured to avoid overreaching by incorporating deloads every 4-6 weeks, aligning with the athlete's history of maintaining progress for only 4 months at a time. The first block focuses on aerobic durability and strength foundation, the second block transitions to winter cross-training (skiing/running) while maintaining cycling specificity, and the third block builds sustained power and endurance for the Atlas race. The final two blocks refine brevet-specific pacing and taper for the 200 km event, with a secondary focus on maintaining fitness for Paris-Brest-Paris.",

upstage/solar-mini4

2.8/12.5

Upstage: Solar Mini 4

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	89.2 s	$0.00379	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00274	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid, uses the correct date, type and intensity values, and keeps the planned 45-minute strength duration and 220 W FTP. The main failure is status: the candidate marks today as completed even though the input records no activity for 2026-10-30, so it invents a completed session and should have kept the status as planned. The description names the right exercises but gives no sets, reps, loads, or rest periods for the rack pulls, split squats, or goblet squats, despite the athlete asking for very specific strength prescriptions. The rationale is specific to the block and the lower-back goal, though it does not state the concrete loss from skipping beyond general posterior-chain benefits. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

nvidia/nemotron-3.5-lightning

2.8/12.5

NVIDIA: Nemotron 3.5 Lightning

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	130.4 s	$0.0125	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00321	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): empty response content. Season revision: The season goal text is replaced with the athlete's new wording and block 1 still starts on 2026-10-21, but the season blocks are copied unchanged from the old Brevet-based plan. The plan still ends on 2027-04-04 and has no Paris-Brest-Paris or Atlas-specific build, so Atlas is named only in the goal text and never in a block name, focus or rationale. Block 1 is essentially unchanged apart from a rationale that narrates the earlier revision, which is meta-commentary. The current week and today's run are coherent, indoor-appropriate for the rain, and grounded in the supplied activities, but the output also returns two extra top-level keys beyond the eight requested. Hard gates failed: block 1 is unchanged.

{
  "season": {
    "goal": "I will need to train for long-distance cycling. I have signed up for the Atlas Mountain Race on
February 28, 2027. Following that, the next big event is Paris-Brest-Paris in August 2027. In-between I need
to be able to comfortably finish a randonneur brevet series. The first one is a 200 km in April. Whenever I
have been doing disciplined training, I have only been able to do so and maintain progress for a maximum of
4 months, usually less.",
    "rationale": "The season prepares the athlete for the Atlas Mountain Race on February 28, 2027, followed
by Paris-Brest-Paris in August 2027, and a randonneur brevet series starting April 2027. Given the athlete's
history of maintaining disciplined training for only 4 months maximum, the plan follows a conservative
aerobic-first progression, carefully managing fatigue. The first block emphasizes aerobic consistency,
cadence above 85 rpm, and low-load strength. The winter block preserves cycling specificity while using
skiing and easy running for cross-training durability. The build phase progresses sustained power and long
endurance riding, followed by brevet-specific pacing, fueling, climbing cadence, and back-to-back load. The
final two weeks reduce volume by approximately 40-50% while retaining brief intensity for race readiness.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block 'Aerobic Base and Strength Foundation' (2026-10-21 → 2026-12-06) emphasizes
durable aerobic fitness, maintaining cadence above 85 rpm on flat riding, and establishing low-load full-
body strength while avoiding unnecessary fatigue. The actual week 1 performance (approximately 587 TSS from
unplanned race and strength activity) was higher stress than the intended recovery week. The block therefore
adopts a conservative adjustment to Week 2 rather than immediate increase in duration or intensity. Aerobic
work remains capped below 140 bpm, cadence should begin above 85 rpm from the first minute, strength must be
logged separately and either completed fully or deliberately reduced, and missed minutes should not be
recovered. A single controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable
aerobic execution, followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no
fresh threshold test or sustained power evidence justifies a change.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

Mistral: Ministral 3 8B 2512

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	70.4 s	$0.00626	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00275	anthropic/claude-haiku-5.5

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is valid and has the required fields, but the central content is wrong. Today is 2026-10-30, where the recorded plan is a 45-minute gym session with no activity recorded, yet the candidate marks today as completed and swaps in the 2026-10-31 mountain hike, which is an invented completed activity and a replaced session. The description also borrows the 10-31 forecast figures (1.3 mm, gusts 4 m/s) and calls the day light rain, and the rationale invents a 15 percent volume figure. The hike instructions themselves (short steps, standing pauses on climbs, poles, mobility circuit afterwards) are practical and specific. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): week: session 1: missing field: bikeWorkout; week: session 2: missing field: bikeWorkout; week: session 3: missing field: bikeWorkout; week: session 5: missing field: bikeWorkout; week: session 6: missing field: bikeWorkout; week: session 7: missing field: bikeWorkout; today: optionalRationale must be a string; today: missing field: bikeWorkout. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

TODAY PLAN

5.3/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
12.5 s	$0.00282	yes (2 attempts)	yes	200	stop

Contract 1.5/1.5 · Fidelity 0.2/2 · Design 1.2/3 · Rationale 0.9/2 · Grounding 0.4/2 · Detail 1.1/2

Judgment: The JSON is valid and has the required fields, but the central content is wrong. Today is 2026-10-30, where the recorded plan is a 45-minute gym session with no activity recorded, yet the candidate marks today as completed and swaps in the 2026-10-31 mountain hike, which is an invented completed activity and a replaced session. The description also borrows the 10-31 forecast figures (1.3 mm, gusts 4 m/s) and calls the day light rain, and the rationale invents a 15 percent volume figure. The hike instructions themselves (short steps, standing pauses on climbs, poles, mobility circuit afterwards) are practical and specific.

    "title": "Controlled Mountain Hike",
    "type": "workout",
    "intensity": "easy",
    "durationMinutes": 120,
    "outdoor": true,
    "canBeOutdoor": true,
    "estimatedTss": 85,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Steady 2-hour outdoor mountain hike in light rain (1.3 mm precipitation, gusts up to 4 m/s) with a strict heart-rate cap of 110–140 bpm to build aerobic endurance and protect your ankles. Focus
```

```
on shorter, controlled steps and brief standing pauses on steep climbs to maintain the heart-rate ceiling.
Follow the hike with your 8-minute evening hip and spine mobility circuit to address cycling posture and
lower-back resilience. Use your hiking poles if available to reduce ankle strain and maintain balance in the
wet conditions.",
    "optional": false,
    "optionalRationale": "This session directly builds the aerobic durability that carries you through the
last 10 km of the 200 km brevet in April, while reinforcing the low-intensity fat-oxidation window that
supports your fat-loss goal. Skipping it would reduce your weekly aerobic endurance volume by ~15%,
weakening your ability to sustain effort over long distances and potentially increasing post-workout hunger
spikes that undermine your fat-loss progress."
  }
}
```

FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned indoor gym workout on 2026-10-30 at 45 minutes with moderate intensity and an estimated TSS of 30, matching the plan and the outdoor and canBeOutdoor logic. However, the description is a bare two-line summary that omits the required exercises, sets, reps, rest periods and load guidance the athlete explicitly asked for in strength sessions. The optionalRationale is a marathon-specific line copied from the example prompt, which is irrelevant to this randonneur and fat-loss athlete and fails to name the concrete loss from skipping the hinge and back-protection work. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): week: session 1: missing field: outdoor; week: session 1: missing field: canBeOutdoor; week: session 1: missing field: bikeWorkout; week: session 1: missing field: estimatedFtpWatts; week: session 2: missing field: outdoor; week: session 2: missing field: canBeOutdoor; week: session 2: missing field: bikeWorkout; week: session 2: missing field: estimatedFtpWatts; week: session 3: missing field: outdoor; week: session 3: missing field: canBeOutdoor; week: session 3: missing field: bikeWorkout; week: session 3: missing field: estimatedFtpWatts; week: session 4: missing field: outdoor; week: session 4: missing field: canBeOutdoor; week: session 4: missing field: bikeWorkout; week: session 4: missing field: estimatedFtpWatts; week: session 5: missing field: outdoor; week: session 5: missing field: canBeOutdoor; week: session 5: missing field: bikeWorkout; week: session 5: missing field: estimatedFtpWatts; week: session 6: missing field: outdoor; week: session 6: missing field: canBeOutdoor; week: session 6: missing field: bikeWorkout; week: session 6: missing field: estimatedFtpWatts; week: session 7: missing field: outdoor; week: session 7: missing field: canBeOutdoor; week: session 7: missing field: bikeWorkout; week: session 7: missing field: estimatedFtpWatts; today: optionalRationale must be a string. cohere/command-r7b-12-2024

2.5/12.5

Cohere: Command R7B (12-2024)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A+	103.5 s	$0.00275	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00278	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response marks today's Gym session as completed even though no activity is recorded for 2026-10-30, which invents a completed workout and should have been planned. The exercise prescription is reasonably specific, with rest and heart-rate cues and a 12 kg load, but it drifts from the week plan by using 2 goblet squat sets instead of 3 and adding both rack and trap-bar pulls. The optionalRationale is left empty even though it must name the adaptation the session builds and what is lost by skipping it. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): no parseable JSON object in response. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The JSON is well formed and keeps the requested today shape, but the status is set to completed even though no activity is recorded for 2026-10-30, which invents a finished session and breaks the fidelity rule. The description also contradicts itself by prescribing a 110 to 132 W ERG target for a gym strength session, and it gives no sets, reps, or loads even though the athlete asked for very specific strength prescriptions. The rationale is reasonably tied to back health and posture, but it does not state what is lost by skipping beyond generic wording. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): Provider returned error. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00250	anthropic/claude-haiku-5.5

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate keeps the correct date, status, workout type, moderate intensity, 45-minute duration, indoor flag and TSS, and the FTP of 220 W, so the core metadata matches the current plan. However, the description is just the generic phrase Strength training with 45 min and gives none of the exercises, sets, reps, rest periods, heart-rate caps or fallbacks that the athlete explicitly asked for and that the week plan specifies, such as elevated trap-bar pulls and two bodyweight split squat sets. The optionalRationale is empty and the required rationale explaining why this gym session matters for the hinge progression and fat loss goal is missing, so the response is largely a metadata echo rather than a coached plan. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): season: missing field: goal; season: missing field: rationale; season: missing field: startDate; season: missing field: endDate; season: block 1: missing field: focus; season: block 1: missing field: weekCount; season: block 2: missing field: focus; season: block 2: missing field: weekCount; season: block 3: missing field: focus; season: block 3: missing field: weekCount; block: missing field: focus; block: missing field: rationale; block: week 1: missing field: number; block: week 1: missing field: focus; block: week 1: missing field: targetLoad; block: week 1: missing field: estimatedFtpWatts; week: missing field: focus; week: missing field: rationale; week: missing field: estimatedFtpWatts; week: session 1: missing field: day; week: session 1: missing field: title; week: session 1: missing field: durationMinutes; week: session 1: missing field: status; week: session 1: missing field: estimatedTss; week: session 1: missing field: outdoor; week: session 1: missing field: canBeOutdoor; week: session 1: missing field: bikeWorkout; week: session 1: missing field: estimatedFtpWatts; week: session 2: missing field: day; week: session 2: missing field: title; week: session 2: missing field: durationMinutes; week: session 2: missing field: status; week: session 2: missing field: estimatedTss; week: session 2: missing field: outdoor; week: session 2: missing field: canBeOutdoor; week: session 2: missing field: bikeWorkout; week: session 2: missing field: estimatedFtpWatts; week: session 3: missing field: day; week: session 3: missing field: title; week: session 3: missing field: durationMinutes; week: session 3: missing field: status; week: session 3: missing field: estimatedTss; week: session 3: missing field: outdoor; week: session 3: missing field: canBeOutdoor; week: session 3: missing field: bikeWorkout; week: session 3: missing field: estimatedFtpWatts; week: session 4: missing field: day; week: session 4: missing field: title; week: session 4: missing field: durationMinutes; week: session 4: missing field: status; week: session 4: missing field: estimatedTss; week: session 4: missing field: outdoor; week: session 4: missing field: canBeOutdoor; week: session 4: missing field: bikeWorkout; week: session 4: missing field: estimatedFtpWatts; week: session 5: missing field: day; week: session 5: missing field: title; week: session 5: missing field: durationMinutes; week: session 5: missing field: status; week: session 5: missing field: estimatedTss; week: session 5: missing field: outdoor; week: session 5: missing field: canBeOutdoor; week: session 5: missing field: bikeWorkout; week: session 5: missing field: estimatedFtpWatts; week: session 6: missing field: day; week: session 6: missing field: title; week: session 6: missing field: durationMinutes; week: session 6: missing field: status; week: session 6: missing field: estimatedTss; week: session 6: missing field: outdoor; week: session 6: missing field: canBeOutdoor; week: session 6: missing field: bikeWorkout; week: session 6: missing field: estimatedFtpWatts; week: session 7: missing field: day; week: session 7: missing field: title; week: session 7: missing field: durationMinutes; week: session 7: missing field: status; week: session 7: missing field: estimatedTss; week: session 7: missing field: outdoor; week: session 7: missing field: canBeOutdoor; week: session 7: missing field: bikeWorkout; week: session 7: missing field: estimatedFtpWatts; today: missing field: title; today: missing field: durationMinutes; today: missing field: status; today: missing field: alternatives; today: missing field: rationale; today:

F	C	A+	207.6 s	$0.00456	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00271	anthropic/claude-haiku-5.5

Mentions Atlas	FAIL	Block 1 changed	FAIL	Block 1 starts 2026-10-21	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The date, status, and JSON shape are correct, but the candidate replaces today's planned Friday Gym session (45 min, moderate) with tomorrow's Saturday mountain hike, so the core session is wrong. The description also cites the calmer Saturday weather window even though Friday's forecast is steady rain with gusts up to 7 m/s, so the grounding is inconsistent. optionalRationale is empty and optional is false, leaving no explanation of why this session serves the goal, and the description gives only a vague heart-rate cap with no stop conditions or rain fallback. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): today: optionalRationale must be a string. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The response is valid JSON with the requested shape and matches the date, workout type, 45-minute duration, and moderate intensity. However, it marks today as completed even though no activity is recorded for 2026-10-30, which fabricates a completed session and contradicts the planned status. The description names the right session elements (elevated pulls and two split-squat sets) but gives no exercises, sets, reps, rest, or RPE guidance as the athlete requested for strength work. The optionalRationale is empty, so the session's purpose against the fat-loss, back-strength, and hip-hinge goals is never explained. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): season: block 1: missing field: weekCount; week: session 1: missing field: bikeWorkout; week: session 1: missing field: estimatedFtpWatts; week: session 2: missing field: bikeWorkout; week: session 2: missing field: estimatedFtpWatts; week: session 3: missing field: bikeWorkout; week: session 3: missing field: estimatedFtpWatts; week: session 4: missing field: bikeWorkout; week: session 4: missing field: estimatedFtpWatts; week: session 5: missing field: bikeWorkout; week: session 5: missing field: estimatedFtpWatts; week: session 6: missing field: bikeWorkout; week: session 6: missing field: estimatedFtpWatts; week: session 7: missing field: bikeWorkout; week: session 7: missing field: estimatedFtpWatts; today: missing field: bikeWorkout. inference-net/schematron-v2-small

0.9/12.5

Inference.net: Schematron V2 Small

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	22.6 s	$0.00349	no

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00248	anthropic/claude-haiku-5.5

Mentions Atlas	Block 1 changed	Block 1 starts 2026-10-21
FAIL	FAIL	FAIL

Hard gates: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21

Combined components (weaker of the two prompts): Contract 0.0/1.5 · Fidelity 0.0/2 · Design 0.0/3 · Rationale 0.0/2 · Grounding 0.0/2 · Detail 0.0/2

Combined judgment: Today plan: The candidate returns valid JSON with the correct date, status planned, workout type, moderate intensity and 45-minute duration matching the existing plan, and correctly sets outdoor to false. However, the description and optionalRationale are empty, so there is no exercise prescription, sets or reps, rest guidance, or explanation of why the gym session matters for fat loss or back resilience. The estimatedTss is 0 and estimatedFtpWatts is 0 despite a 220 W FTP being stated, so the required TSS and FTP estimates are missing and the contract is only partly met. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): week: session 1: missing field: estimatedTss; week: session 2: missing field: estimatedTss; week: session 3: missing field: estimatedTss; week: session 4: missing field: estimatedTss; week: session 5: missing field: estimatedTss; week: session 6: missing field: estimatedTss; week: session 7: missing field: estimatedTss; today: missing field: rationale. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.

Combined judgment: Today plan: No valid JSON was returned for the today plan prompt after 2 attempt(s): extract requires a response_format of type "json_schema" whose schema properties describe the entities to extract, or provider.options.scaledown.entities mapping each entity name to its definition. If entities were sent, check that the key is spelled "scaledown" and that this endpoint allows the "entities" passthrough parameter. Season revision: No valid JSON was returned for the season revision prompt after 2 attempt(s): extract requires a response_format of type "json_schema" whose schema properties describe the entities to extract, or provider.options.scaledown.entities mapping each entity name to its definition. If entities were sent, check that the key is spelled "scaledown" and that this endpoint allows the "entities" passthrough parameter. Hard gates failed: the response never mentions Atlas; block 1 is unchanged; block 1 does not start on 2026-10-21.
