KILLINGIT · LLM BENCHMARK

Prompt Benchmark

Two coaching tasks, all 307 selected models on OpenRouter. Same athlete, two prompts: a single day on Friday 30 October 2026, and a season revision on Sunday 1 November 2026 after the Atlas Mountain Race on 28 February 2027 became the next goal. Every valid response is scored by anthropic/claude-haiku-5.5.

MODELS	VALID ON BOTH	UNGRADED (SPEED F)	HARD-GATE FAILURES	AVERAGE SCORE (VALID)
307	180	0	189	8.7

What was tested. This report combines `2026-11-01-cost-a-plus-v2` and `2026-11-01-above-a-plus` and `2026-11-01-high-end`; a later run replaces an earlier result for the same model. Each model received `benchmarks/prompts/today-prompt.txt` and `benchmarks/prompts/revise-season-prompt.txt` verbatim, in two separate calls. The today prompt asks for only the plan for 2026-10-30. The revision prompt asks for a refreshed season, current block, week and day after the athlete set the Atlas Mountain Race on 28 February 2027 as the next goal. Both prompts contain the full athlete profile, recent activities and coach analyses, the current plan, the athlete's latest metrics, and the weather forecast. A model needed a retry when a response was not parseable or did not match its contract. 152 models needed at least one retry. 127 models did not return valid JSON on both prompts; they remain in the tables with a score of 0 and their provider error, except the 0 models that reached the 20-minute speed-F limit. Those were stopped and recorded with ability ? instead of F, and are omitted from scoring.

Hard gates on the season revision. Ability is F for any model that does not mention Atlas anywhere in its output, leaves block 1 unchanged without asking an Atlas coach question, or changes the start date of block 1 (2026-10-21). The gates are checked mechanically against the supplied current block, not by the judge. 189 models failed at least one gate.

How quality was judged. Every valid JSON response was read and scored by anthropic/claude-haiku-5.5 (OpenRouter) with a rubric for its prompt, not by a code pattern matcher. Each prompt is scored out of 12.5 across contract compliance (1.5), fidelity (2.0), design (3.0), rationale (2.0), grounding (2.0), and extra, useful detail (2.0). The combined score is the mean of the two prompt scores; each component keeps the weaker of the two values, so a failing component in either prompt grades the model F. Time and cost are the sum of both prompt runs, including retries. Judge cost: $1.3723. Ability, speed and cost

> grades use the same bands as the app catalog; a model stopped at the 20-minute speed-F limit is shown as ability ?.

SUMMED MODEL TIME	TOTAL COST	BEST SCORE	WITHIN 0.3 OF BEST
897.1 min	**$18.8478**	**10.8**	**5**

Run `2026-11-01-all-results` · generated 2026-11-01 · model costs are OpenRouter-reported, including retries · times are the sum of both prompts · judge: anthropic/claude-haiku-5.5.

All models

Ranked by combined judged quality, then by cost. Time and cost include both prompts and any retry.

Models close to the best

Every model scoring within 0.3 points of the best (10.8), ranked by quality and then cost. This is the practical shortlist: the plans that are close to as good as the best one on both prompts.

RANK	MODEL	ABILITY	SPEED	COST GRADE	SCORE /12.5	TIME	RUN COST	GATES

Google: Gemini 4 Argon

10.8/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
A	A	C	76.7 s	$0.1134	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00759	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	pass	
Block 1 starts 2026-10-21	pass	

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.4/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.7/2

Combined judgment: Today plan: The JSON is valid and matches the requested today object, and the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 30 TSS and 220 W FTP all agree with the plan. The session is well built for a back-protective hinge progression, with knee-height pulls, two split-squat sets, rest intervals tied to heart rate, and a mobility finish, though the phrase holding a rack or Upright is a sloppy typo and the stated timing adds up to about 48 minutes. The rationale names the posterior-chain and sit-bone goals and what is lost by skipping, and the description draws on Tuesday's goblet squats and Thursday's rest day from the input. Season revision: The response names Atlas throughout the season and block, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and the later blocks tile contiguously to 2027-08-29 with PBP and the April 200 km preserved. Today's 60-minute indoor session has intervals that sum correctly and carries a sensible FTP-based power and cadence prescription. Weaknesses: the Atlas taper block runs through the race date, the 300 km and 400 km and 600 km qualifiers are invented rather than supplied, and past sessions such as Wednesday and Saturday were edited without need. The rationale also contains a small factual slip about the last ride.

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Warm-up (8 min): 5 min easy incline treadmill walk or stair machine (HR 100–120 bpm), followed by 10 bodyweight hip airplanes or glute bridges and 6/side quadruped bird-dogs.\n\nMain Lifting
```

```
Circuit (32 min): Take a full 90–120 seconds of rest between every set and wait until your heart rate drops below 110 bpm before starting the next set.\n1. Elevated Rack Pull or High-Handle Trap-Bar Deadlift (set at knee height to protect your lower back while teaching a clean hip hinge): 1 warm-up set of 10 reps at 30 kg, then 3 working sets of 8–10 controlled reps at 40–45 kg. Brace your core, hinge at the hips with a flat back, and stop immediately if you feel any lower-back strain.\n2. Bodyweight Split Squat (holding a rack or Upright for balance): 2 sets of 8 reps per leg. Capping at 2 unweighted sets protects your quads after Tuesday's goblet squats while stretching the rear-leg hip flexors.\n3. Seated Cable Row (neutral grip): 3 sets of 10–12 reps at 35–45 kg, pausing for 1 second with shoulder blades squeezed together.\n4. Dumbbell Farmer's Carry: 3 walks of 35–40 seconds holding 16–20 kg dumbbells at your sides, walking tall with ribs stacked over hips.\n5. Dead Bug: 3 sets of 8 slow reps per side, pressing your lower back firmly into the floor throughout.\n\nPost-Workout Unrecorded Daily Mobility (8 min, stop watch first): 90s/side couch stretch, 90s soft-knee standing forward fold, 90s 90/90 hip rotations, 90s supported deep squat hold, 90s supine figure-4 glute stretch, and 60s slow cat-cow.\n\nNutrition & Appetite Tip: Have a protein-rich snack (such as skyr or cottage cheese) 60–90 minutes before finishing work so you enter the gym and evening dinner well-satiated.",
    "optional": false,
    "optionalRationale": "This session directly builds the posterior-chain and anti-extension core endurance required to hold a more forward, aerodynamic pelvic tilt on the bike without lower-back pain or excessive weight on your sit bones during next spring's brevets and Paris-Brest-Paris, while preserving lean muscle mass as you lose body fat. Skipping it forfeits one of only two weekly strength stimuli in this foundation block and delays the structural hip-hinge adaptation that protects your back during both long climbs and everyday crouching work.",
    "rationale": "After Thursday's full recovery day, your legs and lower back are fresh to introduce the second half of your weekly gym split. Using knee-height rack or trap-bar pulls safely patterns your hip hinge without forcing you into the deep floor position that irritates your lower back, while keeping split squats to two bodyweight sets respects the quad adaptation observed during Tuesday's goblet squats. Disciplined 90–120 second rest intervals (<110 bpm) keep systemic stress low so this session supports lean-mass preservation and fat loss without triggering post-workout evening hunger."
  }
}
```

SEASON REVISION

    "description": "Ride 60 minutes on the indoor trainer focusing on smooth, high-cadence pedaling. Warm up
```

```
for 10 minutes at 124 W (55% FTP), hitting 85+ rpm within the first two minutes. Ride the main 45-minute
block alternating 10 minutes at 135 W (60% FTP) at 88-92 rpm with 5 minutes at 146 W (65% FTP) at 90-95 rpm
(3 sets total), keeping heart rate strictly below 140 bpm throughout. Cool down for 5 minutes at 113 W (50%
FTP). Done indoors to ensure exact cadence control and avoid today's cold rain (3-8 °C, 3.6 mm
precipitation).",
    "durationMinutes": 60,
    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If you prefer to stick with the original 30-minute easy treadmill run (HR 115-135 bpm, 165-170 spm),
you can substitute that, though getting on the bike today is strongly preferred since you have not ridden
since last Saturday.",
      "If your legs feel heavy from yesterday's 2-hour hike, hold a steady 124 W (55% FTP) for 45 minutes at
85-90 rpm and keep heart rate below 130 bpm."
    ],
    "rationale": "Because you have already completed a run and a 2-hour hike this week without logging a
single bike session, a 60-minute indoor Z2 spin is the most valuable way to close Week 2. Preparing for the
Atlas Mountain Race in late February and your spring brevets requires consistent saddle contact and
neuromuscular pedaling efficiency so you do not revert to low-cadence grinding (66-78 rpm). Riding indoors
keeps you out of today's cold 3-8 °C rain and lets you lock in an 88-95 rpm cadence at a low 38 TSS cost
before Week 3 begins.",
    "optional": false,
    "optionalRationale": "This session maintains cycling-specific neuromuscular coordination and high-
cadence efficiency (85-95 rpm) toward the Atlas Mountain Race and your spring brevets; skipping it means
going eight full days without touching the bike, losing the specific pedaling economy that protects your
quads over multi-day ultra-distance terrain.",

NVIDIA: Switchyard

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
A	B	D	128.0 s	$0.2778	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00746	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.5/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.7/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and matches the planned Gym session on 2026-10-30 in date, type, intensity, 45 minutes, indoor status, 30 TSS and 220 W FTP. The exercise selection follows the current week plan well: an elevated hip-hinge pull replacing floor deadlifts, capped split squats, lat pulldown progression, loaded bridges, Pallof and planks, with explicit sets, reps, rest and a stop condition for low-back involvement. The rationale is specific to the hinge, back pain, sit-bone posture and PBP goals and names what is lost by skipping. Weaker points are that the lat pulldown jump to 40 kg is not clearly justified against the last 50 kg set, and the 30 to 40 kg pull load is an assumption that is stated but not tied to recorded loads. Season revision: The season is refreshed in place with Atlas named in the goal, the blocks and the block 1 rationale, block 1 starts on 2026-10-21, and the season blocks tile contiguously through 2027-08-15 with correct week counts. Weaknesses: today's planned treadmill run was replaced wholesale by a trainer ride rather than kept with a completion note, the Atlas description adds unsupplied facts such as self-supported ultra, the 200 km and PBP dates are assumed, and some rationale text describes the prior week's outcome instead of the plan as it stands. The sweet-spot progression, cadence targets and interval arithmetic for today are concrete and consistent with the 225 W FTP.

    "bikeWorkout": null,
    "description": "Gym session of about 45 minutes. Rest 90–120 s between sets until your heart rate is
below 110 bpm. Keep every set 3–4 reps short of failure. Stop any set if you feel your lower back, not your
glutes and hamstrings, doing the work.\n\n1) Warm-up, 6 min: easy treadmill walk or incline walk at HR below
120 bpm for 4 min. Then 1 min cat-cow and 10 slow bodyweight hip hinges holding a broomstick or light bar
along your spine.\n2) Elevated pull from knee-height rack or trap-bar handles, 2 warm-up sets of 6 with an
empty bar, then 3x8 with a light load. I assume about 30–40 kg total, so choose a weight you could lift 12
times. Keep a flat back, push your hips back, squeeze your glutes at the top and lower slowly. Do not
increase the weight today.\n3) Bodyweight split squat, 2x8 per leg, holding a support if needed. Use a
controlled tempo and keep your torso tall. Do not add weight, so your quads stay fresh.\n4) Lat pulldown,
3x10: 40 kg, 45 kg, then 50 kg if the first two sets felt smooth. Your last session reached 50 kg for 10
reps.\n5) Loaded glute bridge, 3x12 with a dumbbell or plate across your hips. Choose a load that makes the
last 2 reps feel firm. Pause 1 s at the top.\n6) Pallof press, 3x10 per side with a light-to-moderate cable
load. Resist rotation and keep your ribs down.\n7) Plank, 3x30 s, or dead bug 2x8 per side if the plank
loads your back.\n\nAfter the gym, stop recording and do your 8-minute hip and spine mobility circuit
unrecorded. Eat a protein-rich snack when you get home, then a high-volume vegetable dinner. This helps
limit evening snacking.",
    "optional": false,
    "optionalRationale": "This session rebuilds a safe, loaded hip hinge, which is the quality that lets you
later do heavier posterior-chain work. Without it you stay exposed to back injury in carpentry work and to
back ache on long climbs, and you cannot hold a lower, more aerodynamic riding position that spares your sit
bones on 200 km+ brevets. The core work and pulling volume build the trunk stability behind the PBP goal and
the fat-loss goal. If you skip it, you lose the second weekly gym stimulus of Week 1, and you delay the
strength progression that Block 2 and Block 3 depend on."
  }
}
```

SEASON REVISION

10.3/12.5

RETURNED JSON

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 strong and healthy, then comfortably
complete the April 200 km brevet and the randonneur brevet series, and arrive at Paris-Brest-Paris in August
2027 fresh and durable. The plan assumes the 200 km falls in mid-April and that Paris-Brest-Paris starts in
the second half of August. Both dates are placeholders until you confirm them.",
    "rationale": "The Atlas Mountain Race on 28 February is the first and hardest target. It is a multi-day,
self-supported ultra effort, so it needs aerobic durability, efficient cadence, climbing endurance and the
ability to ride long days back to back, far more than a high FTP. About 18 weeks of preparation sits right
at your 4-month limit for disciplined training, so the plan stays aerobic-first, adds intensity only in
small doses, and builds a deload week into every third or fourth week. Volume rises first and intensity
second, so you are less likely to burn out before the race. After Atlas, two full recovery weeks reset body
and motivation before a short, conservative build to the April 200 km, which you can ride comfortably on
Atlas fitness. The brevet series block then extends the long-ride base, and a reset week separates it from
the Paris-Brest-Paris build. That build is a fresh 4-month cycle: five weeks of build followed by a three-
week taper into August. Strength stays light and is logged separately throughout. Skiing and easy running
count as aerobic cross-training in winter, not as extra load stacked on top of cycling.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Rebuild cycling volume from a low base, ride with cadence above 85 rpm from the first minute,
keep all aerobic work under 140 bpm, and establish light strength training. Add one sweet-spot session from
Week 3.",
    "rationale": "The Atlas Mountain Race on 28 February rewards aerobic durability and efficient,
repeatable pedalling far more than peak power, so this block lays the foundation before specific work
begins. Your last two weeks produced plenty of load but little bike-specific volume. Week 2 delivered no
cycling, and the other work was easy and aerobic. Cycling volume therefore returns in steps of about 3.5
hours, then 4.5-5 hours, then 5.5-6.5 hours, and the longest weekend ride grows from 2 hours to 3 hours. A
single sweet-spot session starts in Week 3 because you report feeling good and kept every aerobic effort
under 140 bpm. The FTP of 225 W stays unchanged, as no fresh test or sustained power evidence justifies a
different value. Strength is logged separately, limited to two light sessions, and never stacked on a key
ride day. Week 7 is a deload so you enter the Atlas build fresh and with room to progress, which protects
your roughly 4-month window of disciplined training. Missed minutes are not made up.",

openai/gpt-6.1-sol

10.6/12.5

OpenAI: GPT-6.1 Sol

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
A	A	B	79.1 s	$0.0572	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00717	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.7/2 · Design 2.5/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.7/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and the 220 W FTP, matching the Friday gym session in the current plan. The exercise list is specific, with sets, reps, reserve guidance, rest periods, stop conditions and a fallback for the hinge, though the added chest press and the 40 kg pulldown are not in the plan. The rationale is accurate but generic on fat loss and hunger, while the optionalRationale names the concrete loss from skipping, and the response honestly notes that back symptoms and working loads were not reported. Season revision: Atlas is named in the season goal, block summaries and week and today rationales, block 1 starts on 2026-10-21 and is genuinely revised, the season blocks tile contiguously to 2027-08-31, and tomorrow, nextWeek, nextBlock and bodyMetrics are kept null or empty as required. The trainer workout's power targets (101, 124, 135 W) correctly match 45, 55 and 60 percent of 225 W and sum to 40 minutes. Weaknesses: the block name and focus never mention Atlas, the Atlas Event block lists 3 weeks across roughly two calendar weeks, past session titles and TSS values were quietly rewritten, and today's session was swapped from the supplied run to a trainer ride without explanation in the rationale. Some block rationale text reads as meta-commentary about week labelling.

```
    "description": "Use your gym for a controlled, pain-free session. Since your current back symptoms and hinge working weight are not reported, start conservatively and do not increase loads today.\n\nWarm-up — 5 minutes: easy stationary cycling, then 8 supported bodyweight hip hinges and 5 shallow split squats per side.\n\nStrength — approximately 32 minutes:\n1. Elevated rack or trap-bar pull: 2 × 8 from approximately knee height, using a light implement you can lift comfortably with at least 4 repetitions in reserve. Practise an unloaded hinge first; if you cannot keep the movement comfortable and controlled, use 2 × 12 glute bridges instead. Do not force an empty Olympic bar if it is too heavy.\n2. Supported bodyweight split squat: 2 × 8 per side, using a shallow, comfortable range. Keep both sets easy enough to leave 3–4 repetitions in reserve.\n3. Lat pulldown: 2 × 10 at 40 kg, reducing the load if needed to leave 3 repetitions in reserve.\n4. Machine chest press: 2 × 10 at a light load that leaves 3–4 repetitions in reserve.\n5. Pallof press: 2 × 10 per side, pausing briefly with your arms extended without rotating your trunk.\n\nRest 90–120 seconds between compound sets and about 60 seconds between Pallof sets; start again when your breathing is comfortable rather than chasing a heart-rate threshold. Stop any movement that causes back or joint pain, and avoid grinding repetitions.\n\nFinish — 8 minutes of gentle mobility: low lunge, soft-knee forward fold, 90/90 hip rotations, supported squat hold, supine figure-4 stretch, and cat-cow. Stay within comfortable ranges rather than forcing flexibility.",
    "rationale": "Your manageable quad burn on Tuesday and comfortable run/walk and rowing on Wednesday support a second conservative strength exposure after Thursday's scheduled recovery. Low-volume leg work, a carefully supported hinge progression, and trunk control build the strength you need to tolerate cycling posture and long climbs without exhausting your legs before the weekend. Strength training also helps preserve muscle during gradual fat loss.",
    "optional": false,
    "optionalRationale": "This session builds posterior-chain strength, anti-rotation control, and whole-body loading tolerance for your longer-term brevet and Paris-Brest-Paris preparation. Within your Autumn Re-Entry block and approximately 5–5.5 hours of structured training this week, it provides your second strength stimulus without adding hard endurance work. Skipping it would remove that second opportunity to develop back-tolerant movement and preserve muscle while you pursue fat loss."
  }
}
```

SEASON REVISION

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build consistent cycling exposure, aerobic durability and sustainable strength habits before
adding substantial intensity.",
    "rationale": "Your recent hiking, easy running and rowing show that you tolerate controlled aerobic
work, and your strength sessions provide useful supporting load. However, the current week contains no
recorded cycling before today, so cycling consistency and saddle tolerance are more valuable now than
threshold intervals. The earlier three-hour Zwift race and additional leg loading also favor a measured
progression. Keep most riding conversational, generally below 140 bpm, using power to prevent surges rather
than forcing power when your heart rate or perceived effort rises. Aim for a comfortable cadence around 85–
95 rpm on easy flat trainer work without forcing an unnatural rhythm. Establish three repeatable rides
before extending the longest ride, retain one purposeful strength session, and use a second only when
recovery is good. Recovery weeks and varied aerobic options support your longer-term adherence. Your FTP
remains anchored to your stated 225 W; later small projections are conditional planning estimates, not
measurements. Week labels follow Monday-start calendar weeks, with the first week clipped to the block's 21
October start.",

specific session.",
    "rationale": "You completed two strength sessions, 47 minutes of combined rowing and running, and a 125-
minute hike. These sessions provide useful general endurance and strength, but not the repeated pedaling and
saddle exposure required for Atlas and your brevet goals. Today's short trainer ride supplies that missing
specificity without trying to recover missed training. With approximately 5.5 hours and 182 TSS for the
week, the priority is absorbing your completed work and arriving ready for consistent easy cycling, not
adding a hard stimulus. Monday remains recovery, Thursday remains a missed session rather than a training
debt, and no extra strength is needed after your two completed sessions.",

unbiased/pareto-26.9

10.5/12.5

Pareto 26.9

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
A	B	B	124.9 s	$0.0452	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00700	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.5/1.5 · Fidelity 1.7/2 · Design 2.4/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, matches the required today object, and keeps the date, planned status, 45-minute moderate gym workout, 30 TSS, 220 W FTP and null bikeWorkout consistent with the plan. The exercise selection is sensible and respects the back-protection constraints, with specific sets, reps and a rest rule tied to the athlete's heart-rate feedback. Weaknesses are that load guidance for the rack pulls and goblet squats is thin, there are no stop conditions or pain fallbacks, and the mobility circuit is named but not described, while the rationale leans on a strong claim that this is the primary fix for back pain rather than tying the session to the fat-loss goal. Season revision: The candidate names Atlas throughout the season and block, keeps block 1 starting on 2026-10-21, and gives block 1 genuinely new weeks, so the three hard requirements are met. The season tiles contiguously from October 2026 to August 2027 and explicitly handles the four-month adherence limit, the Atlas taper and the post-race recovery. Weaknesses: the season end date of 2027-08-31 is an assumption, the block 1 weeks are conservative to the point of little cycling progression for a long-distance goal, and the Sunday trainer session with its power targets (135, 146 and 113 W) is consistent with the 225 W FTP and the weather, but the week's past-day session titles were renamed rather than kept as supplied. The weekly TSS total of about 194 checks out against the session estimates.

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.6/2

Combined judgment: Today plan: The response is clean valid JSON with only the requested today object, and it matches the planned 2026-10-30 moderate 45-minute indoor gym session with correct status, TSS, FTP and indoor flags. The exercise selection is sensible for this athlete's lower-back and quad constraints: a knee-height pull, capped bodyweight split squats, a seated row and dead bugs, with explicit sets, reps, rest and heart-rate gates. The rationale ties the session to sit-bone pressure, back protection and the spring brevet and PBP goals, but it is somewhat thin on the week's target load and the fat-loss role. The 40 kg starting load for the pull is a reasonable stated assumption, though the response does not explicitly flag it as one. Season revision: The season is genuinely re-planned around Atlas Mountain Race on 28 February 2027, with contiguous blocks that tile to 2027-08-22, block 1 kept at 2026-10-21, and the current week and today coherent with the supplied activities and weather. Weaknesses include a short and weakly differentiated taper before Atlas, a season end date and PBP timing that are assumed rather than supplied, some meta-style phrasing about the prior load in the block rationale, and a coachQuestion about the April brevet date that a conservative assumption could have resolved, so the question-only penalty does not apply but the question is avoidable.

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Indoor gym session, 45 minutes, moderate. This is the second strength day of the week: a
flat-back hip hinge and two controlled single-leg sets, not a hard leg day. Rest 90–120 seconds between
every set and do not start the next set until your heart rate is under 110 bpm. Warm-up, 8 minutes: 4
minutes easy bike or SkiErg, then 8 glute bridges, 6 slow dowel or empty-bar hip hinges with a flat back,
and 6 shallow bodyweight split squats per side. Main work: (1) Knee-height rack pull or trap-bar pull, 3
sets of 8. You have not loaded this pattern yet, so start at 40 kg, or the empty trap bar if 40 kg already
rounds your lower back. Bar starts about knee height; stand tall without leaning back; stop the set if the
lower back takes over. (2) Bodyweight split squat, 2 sets of 8 per leg only — no third set. Torso tall,
front foot flat, hand on a rack for balance. Stay at bodyweight because Tuesday's goblet squats still left
some quad burn. (3) Seated cable row or chest-supported row, 3 sets of 10, starting at 35–40 kg and only
going up if you can pause 1 second at the chest without shrugging. This replaces a bent-over row so the
lower back stays quiet. (4) Dead bug, 3 sets of 6 per side, slow, lower back pressed into the floor. After
you save the session, do your usual unrecorded hip and spine circuit, about 90 seconds each: couch stretch
or low lunge with hips forward, standing forward fold with soft knees, 90/90 hip rotations, deep squat hold
with heels down, supine figure-4, and cat-cow. Keep dinner protein-rich and high in vegetables so the
session does not turn into a large evening meal.",
    "optional": false,
    "optionalRationale": "This session builds the flat-back hip hinge and single-leg stability that take
load off your sit bones and lower back on long climbs, which is the posture base for the April 200 km brevet
and Paris-Brest-Paris. Skipping it leaves that hinge untrained for another week while your back is ready for
this conservative load and not for heavier squats or good mornings."
  }

{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027, comfortably complete a 200 km brevet in
April 2027, and arrive ready for Paris-Brest-Paris in August 2027 by training in sustainable cycles of about
four months.",
    "rationale": "Atlas Mountain Race is your first major test and it sits about four months from now, which
is as long as you have previously been able to keep disciplined progress. The season is therefore separate
cycles with real recovery between them, not one continuous build through August. You first lock in easy
aerobic durability, cadence above 85 rpm, and light strength inside your two-hour weekday limit, with the
long work on weekends. December and January grow the long ride, fueling, and climbing cadence, using skiing
and easy running as extra aerobic time rather than extra fatigue. February is specific and then shorter so
you reach 28 February fresh. Two easy weeks follow the race. Brevet-specific riding then starts on 15 March
so you can start a 200 km from early April; the exact April date is not stated, so that block keeps you
ready across April rather than peaking for one unknown day. After that you start a new cycle for Paris-
Brest-Paris, again with an easier week every fourth week, because a second hard build stacked on the first
would repeat the pattern that has stopped your progress before. The season runs through 22 August 2027 on
the assumption that Paris-Brest-Paris falls in mid-to-late August and is finished by then. Your stated FTP
of 225 W is the baseline.",

  },
  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "You need time in the saddle and a habit you can keep, not a threshold chase, because Atlas
Mountain Race on 28 February 2027 is won by durable easy pacing, climbing cadence, and fueling, and you have
only held disciplined progress for about four months. Recent rides show you can stay easy when you choose
to: indoor power near 100-135 W with heart rate in the teens and a hike at 114 bpm. Cadence has still
dropped to 66-78 rpm when you are not watching it, and the three-hour effort at 187 bpm average heart rate
the day before this block shows that hard racing does not build the engine you need. Weekdays stay inside
your two-hour after-work limit. Weekends carry the longer ride. Aerobic heart rate stays under 140 bpm,
cadence is above 85 rpm from the first minute on the flat, and missed minutes are not made up. Strength is
one low-load full-body session a week with loads logged, because extra leg work such as pole vaulting has
already shown up as heavy quads. A short tempo block waits until the fifth week, and only if the easy rides
have been consistent. Your stated FTP of 225 W stays the baseline; recent power is far below threshold and
does not support a higher number. November rain and sunset before the end of the working day mean the longer
rides go on the trainer unless a weekend day is actually dry.",

10.4/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	B	112.3 s	$0.0787	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00691	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns only the requested today object with status planned, which is correct because no activity is recorded for 2026-10-30, and it keeps the planned 45-minute moderate indoor gym session with the elevated pull and split squat progression. The design is safe and specific, with sets, reps, rest tied to the heart-rate recovery cue, and a sensible seated row and Pallof press addition, though the cable row load of 35 to 40 kg is asserted without basis and there is no explicit load progression or RPE guidance. The rationale is grounded in the athlete's lower-back and hip-hinge problems and the brevet goal, and the description repeats the daily mobility circuit cleanly. Season revision: The response names Atlas throughout, keeps block 1 starting on 2026-10-21, and re-tiles the remaining season contiguously to 2027-08-29 with a sensible four-month wave, March reset and Atlas taper. Block 1 changes are modest, mainly the rationale and the week 2 target load, and the Atlas-specific work is largely deferred to later blocks. The season rationale adds world-knowledge detail such as Morocco and the 1,200 km PBP distance, and the Thursday session is retitled as Easy Indoor Spin even though the athlete logged nothing that day. Today's session is detailed and kept coherent with the week, and tomorrow, next week and next block are correctly null.

    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Warm-up (5 min): Light dynamic mobility including 10 cat-cows, 10 bodyweight glute
bridges, and 10 unloaded hip hinges focusing on soft knees and flat back.\n\nMain Strength Circuit (32
```

```
min):\n1. Elevated Knee-Height Rack Pulls (or High-Handle Trap Bar Pulls): 1 warm-up set of 8 reps with an empty bar, then 3 working sets of 8 reps with light resistance (30–40 kg total). Set the bar pins directly at kneecap height. Focus on bracing your core, pulling your shoulders back, and hinging purely from your hips with a neutral spine—do not pull from the floor. Rest a full 90–120 seconds between sets until your heart rate drops below 110 bpm.\n2. Bodyweight Split Squats: 2 sets of 8 reps per leg. Keep your torso upright and lower under control. Rest 90 seconds between sets. Keep this strictly bodyweight to preserve your quads for the weekend.\n3. Seated Cable Row (neutral grip): 3 sets of 10 reps at moderate weight (approx. 35–40 kg). Focus on mid-back retraction without leaning backward.\n4. Half-Kneeling Pallof Press: 3 sets of 10 reps per side. Brace your glutes and core to resist rotational pull.\n5. Side Plank: 3 sets of 20–30 seconds per side. Rest 45 seconds between sets.\n\nDaily Hip and Spine Mobility Circuit (8 min, unrecorded):\nSpend 90 seconds on each movement: (1) Couch stretch or low lunge with hips gently pushed forward, (2) Standing forward fold with soft knees, gradually lengthening hamstrings toward the floor, (3) 90/90 hip rotations on the floor, (4) Deep squat hold with heels grounded (holding a sturdy gym upright for balance if needed), (5) Supine figure-4 glute stretch, and (6) Slow cat-cow focusing on segmented spinal movement.",
    "optional": false,
    "optionalRationale": "This session builds foundational posterior-chain durability, pelvic stability, and safe hip-hinge mechanics without loading your lumbar spine from the floor. If you skip this workout, you miss the progressive neuromuscular stimulus required to strengthen your glutes and lower back, leaving you vulnerable to the climbing back pain and pelvic-tilt sit-bone friction that derail multi-hour randonneur brevets."

typesafe/jev-router

10.4/12.5

TypeSafe: Jev Router

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	C	142.7 s	$0.1077	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00723	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns only the required today object with the correct date, planned status, 45 minute moderate gym workout, outdoor false, canBeOutdoor false, FTP 220 and bikeWorkout null, all consistent with the plan. The exercise selection is sensible for the hinge-protection goal, with explicit sets, reps, RPE, rest and a heart-rate ceiling of 110 bpm that matches the coach feedback. The weakness is that no starting loads or load progression are given for the rack pulls or cable row, and the rationale is somewhat generic about lean mass and back resilience. Season revision: The season is refreshed in place with the current block starting on 2026-10-21, the later blocks tile cleanly through 2027-08-31, tomorrow, nextWeek and nextBlock stay null, and the week has seven sessions with a matching today entry. Atlas is named in the season goal, several block focuses, the week rationale and today's rationale, and the 45-minute indoor ride uses correct 225 W percentages that sum to the stated duration. Weaknesses: the current block itself is named Cycling Re-entry and never mentions Atlas, the season rationale invents a multiday Atlas framing the athlete did not state, and the week's pre-Atlas load is only lightly tied to the event.

TODAY PLAN

  "season": {
    "goal": "Build toward completing the Atlas Mountain Race starting 28 February 2027, comfortably completing your spring randonneur brevet series, and finishing Paris-Brest-Paris in August 2027 while sustaining a training routine beyond four months.",
    "rationale": "Your goals require durable cycling fitness, climbing strength, reliable fueling, equipment familiarity, and sustainable training habits more than an early peak in FTP. Your recent easy activities felt good, but limited recent cycling and the substantial October race load favor rebuilding cycling consistency before adding demanding intervals. Use short, varied training cycles with regular recovery, a deliberately achievable minimum week, and no make-up sessions. Most riding should remain conversational, with progressively longer weekend rides and limited purposeful intensity. Skiing can support winter aerobic fitness without replacing all cycling-specific work. Your Atlas date is treated as the start of a multiday event; its finishing date and your exact brevet and PBP dates are unconfirmed, so event and recovery windows remain provisional. The season ends on 31 August as a planning horizon, not an assumed PBP date. Atlas readiness will depend on tolerating progressive long rides, technical practice, and equipment rehearsals; this plan cannot guarantee readiness from your current training.",

anthropic/claude-sonnet-5.5

10.4/12.5

Anthropic: Claude Sonnet 5.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	D	104.8 s	$0.2305	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00698	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.3/2 · Design 2.2/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.6/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate values, 45 minutes, indoor gym flags, null bikeWorkout and the 220 W FTP. The session is a sensible gym hinge-and-core day with specific sets, reps, rest, RIR and stop conditions, and it honestly flags the missing pull-load number as an assumption. The rationale ties the session to the hinge progression, back and sit-bone goals and fat-loss muscle retention, though it could say more about the weekly load target. Minor weaknesses are the 3x10 lat pulldown at 40 kg sitting below the athlete's recent 50 kg work without much justification, and the extra loaded glute bridge adding volume to a session the plan keeps moderate. Season revision: The block starts on 2026-10-21, the Atlas Mountain Race is named in the season, block and rationale, and the blocks tile contiguously with a sane taper before 28 February. The season ends on 2027-04-04, however, so Paris-Brest-Paris in August 2027 and the intervening brevet series are dropped from the plan. Today was switched from the supplied run to a detailed indoor trainer ride whose interval durations sum correctly to 60 minutes, and the week keeps seven sessions with the completed days reported accurately. Some season rationale describes general Atlas race characteristics such as hike-a-bike that the athlete did not state.

    "bikeWorkout": null,
    "description": "Gym session, about 45 min. Rest 90–120 s between sets so your HR drops below 110 bpm before each set. Expect a session average around 100–110 bpm and peaks under about 140 bpm. Stop every set with 3+ reps in reserve. I have no pull-load number from you, so the load for the rack pull is a conservative assumption.\n\n1) Warm-up (6 min): cat-cow x10, hip hinge with a dowel or broomstick x10 (flat back, soft knees), bodyweight glute bridge x12, 90/90 hip rotations x5 per side.\n2) Elevated rack or trap-bar pull from knee height: 3 x 8. Start with the bar plus a light plate load (roughly 30–40 kg total). Brace your core, keep your back flat, and push the floor away. Stop the set if your lower back takes over. Do not pull from the floor yet.\n3) Bodyweight split squat: 2 x 8 per side, holding a support for balance. Use a short, controlled range and stop well before quad burn forces you to rush.\n4) Lat pulldown: 3 x 10 at 40 kg (you already did 50 kg x 10, so keep this smooth with a 2-second lowering phase).\n5) Loaded glute bridge: 3 x 12 with a light load (about 12 kg, or bodyweight if that feels easier). Squeeze for 1 s at the top.\n6) Pallof press: 3 x 10 per side.\n7) Plank: 3 x 30 s, plus side plank 2 x 20 s per side if time allows.\n\nFinish by stopping the recording and then doing your 8-minute hip and spine mobility circuit (unrecorded). It is raining, so being indoors costs you nothing. Afterwards, have a protein-rich snack and plan a high-volume vegetable dinner to keep tonight's hunger manageable.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge pattern and core stability that will later let you load heavier posterior-chain work. That strength is what stops back ache on long climbs and reduces the sit-bone pressure of an upright riding position on PBP-length rides. It is also the second lifting dose of the week. Skipping it delays the hinge progression and the gradual strength gain that supports fat loss, because lifting helps preserve muscle while you eat in a deficit. It also fits the block's strength-and-mobility focus and keeps the week's load on target. Tomorrow's hike is capped at 2 hours, so today's work is controlled and moderate rather than taxing."
  }
}
```

SEASON REVISION

9.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
89.2 s	**$0.1679**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 1.3/2 · Design 2.2/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.6/2

Judgment: The block starts on 2026-10-21, the Atlas Mountain Race is named in the season, block and rationale, and the blocks tile contiguously with a sane taper before 28 February. The season ends on 2027-04-04, however, so Paris-Brest-Paris in August 2027 and the intervening brevet series are dropped from the plan. RETURNED JSON

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 strong and healthy, then recover and complete a 200 km randonneur brevet in April 2027 (assumed early April) as the first step of the brevet series that leads to Paris-Brest-Paris in August 2027.",
    "rationale": "The Atlas Mountain Race on 28 February is the first and hardest target, so the season builds toward it. It is a multi-day, self-supported ultra event, probably with rough terrain and some hike-a-bike. That calls for aerobic durability, fuelling, steady climbing at low intensity, strong walking legs and enough strength to hold position on a loaded bike. You can only sustain disciplined training for about 4 months, and 21 October to 28 February is about 4.3 months. The plan therefore starts modestly, builds volume gradually, includes a deload every fourth week, and puts the peak in late January and early February rather than early on. After the race, a recovery block protects you from the long-effort fatigue and leads into the April 200 km brevet, which is comfortably within reach on the fitness you will have. Paris-Brest-Paris preparation is a separate disciplined cycle that should start after the April brevet, so this season ends with the first brevet. The 225 W FTP is the baseline. Recent evidence shows large fatigue from unplanned hard efforts (the 3-hour race at 187 bpm average) and cadence below 85 rpm on easy rides, so early blocks keep aerobic work under 140 bpm and build cadence efficiency before adding intensity. Hiking, skiing and easy running add aerobic volume at low joint and muscular cost through the winter.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence above 85 rpm and low-load strength without
stacking fatigue, as the base for the Atlas Mountain Race.",
    "rationale": "The Atlas Mountain Race on 28 February rewards a deep, durable aerobic base, so this first
block raises steady cycling volume and cadence efficiency before intensity enters. The block is also the
first part of an approximately 4-month disciplined stretch you can sustain, so it progresses gradually and
includes a deload in Week 4. Week 1 carried about 587 TSS because of the 3-hour race at 187 bpm average HR
and strength work with pole vaulting, which is a high load for a recovery week. Week 2 delivered mostly
strength, rowing, a short run and long hikes at controlled heart rates. Almost no cycling was done, and
cadence on the trainer has stayed below 85 rpm, so the closing ride of Week 2 and the early Week 3 rides
focus on cadence efficiency. Every aerobic session stays under 140 bpm, strength is logged separately and
either completed or deliberately shortened, and missed minutes are not made up. Hiking stays in the plan
because walking durability and steady aerobic work suit the race. A single controlled threshold-adjacent
stimulus enters in Week 3 only if cycling execution is clean, followed by the Week 4 deload. The 225 W FTP
is retained because no fresh test or sustained power data justifies a change.",

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	C	A	220.5 s	$0.0336	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00692	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns a clean today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and 220 W FTP, matching the week plan's Friday Gym Strength B. The exercise prescription is specific, with sets, reps, RPE guidance, rest periods, a fallback for back discomfort and a stop condition, and it respects the two-set split squat cap. Weaknesses are that the rationale is somewhat generic, the goblet squat progression from the week plan is not referenced, the athlete's requested heart-rate targets for non-cycling work are replaced by a vague instruction not to chase heart rate, and the 45-minute timing is tight for the listed lifts. Season revision: The season is cleanly re-tiled from 2026-10-21 to 2027-08-31 with contiguous blocks, block 1 starts on 2026-10-21, tomorrow, nextWeek and nextBlock stay null, and the Atlas race is named in the season goal, block 3 and today's rationale. The weakness is that block 1 itself is still the old brevet-era aerobic base: weeks 3 to 7 are not re-tailored for Atlas-specific demands such as hike-a-bike, multi-day fatigue or off-road volume, and the coach question asks about off-road access the athlete never raised instead of working that into the plan. Some Morocco-specific details such as night riding and multi-day bike carrying are inferred rather than supplied.

    "bikeWorkout": null,
```

```
    "description": "Allow 5 minutes to warm up, 32 minutes for lifting and 8 minutes for mobility. Warm up with easy stationary cycling, then rehearse 8 unloaded hip hinges while keeping your spine comfortably neutral. Complete: elevated knee-height rack or trap-bar pull 2 × 8; supported bodyweight split squat 2 × 8 per side; machine chest press 2 × 10; seated cable row 2 × 10; Pallof press 2 × 10 per side. Your current hinge load is unknown, so use the lightest practical setup and keep every exercise around RPE 5–6/10, leaving at least four good repetitions in reserve. Rest 90–120 seconds between lower-body sets and 60–90 seconds between upper-body and core sets; take longer if your breathing or technique has not recovered. Do not chase a heart-rate target during lifting. If the elevated pull causes back discomfort or you cannot maintain control, use 2 × 12 comfortable glute bridges instead. Stop any exercise that produces sharp or increasing pain. Finish with 8 minutes of gentle low-lunge stretching, supported soft-knee forward folding, 90/90 hip rotations, supported squat holding, supine figure-4 stretching and cat-cow. Avoid forcing range or rounding into a loaded stretch.",
    "rationale": "Your manageable quad burn on Tuesday and comfortable Wednesday run/row support a second conservative gym exposure after Thursday's scheduled recovery. Low-volume leg work and a carefully controlled hinge develop strength without creating unnecessary soreness before tomorrow's hike. Supported pulling, pressing and anti-rotation work address your full-body strength goal and the trunk endurance you need for long climbs.",
    "optional": false,
    "optionalRationale": "This session builds posterior-chain strength and trunk control toward tolerating long brevet and Paris-Brest-Paris rides with less back fatigue. It provides the Autumn Re-Entry block's second weekly strength stimulus within your roughly five-hour training week, while resistance training supports muscle retention during gradual fat loss. Skipping it would remove that second strength exposure and slow your progression toward more resilient hips and back."
  }

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027 with the durability to ride and carry a bike for multiple days, then comfortably finish a 200 km brevet in April as the first step of the randonneur series, and build to Paris-Brest-Paris in August 2027 with steady pacing, fuelling discipline and sustained aerobic endurance.",
    "rationale": "The season runs from 21 October 2026 to the end of August 2027 because that span covers your three goals in order: the Atlas Mountain Race on 28 February, the 200 km brevet in April with the rest of the randonneur series behind it, and Paris-Brest-Paris in August. The near-term priority is Morocco: a multi-day off-road race rewards long, durable, well-fuelled riding and the ability to keep pedalling and pushing a bike for very long days much more than it rewards a high threshold, so the first half of the season builds aerobic volume, cadence efficiency, general strength and fuelling habits. The brevets then convert that durability into sustained road distance, and the PBP block extends it to 400-600 km with sleep and pacing management. Because you can hold disciplined structure for roughly four months at a time, the season is cut into short single-purpose blocks of two to eight weeks with planned resets — most importantly a two-week reset straight after Morocco — so each block starts with one clear job and ends before your motivation or your adaptation runs out. Volume grows conservatively from a 4-6 hour aerobic base toward long weekend rides, threshold work enters in small doses only after a week of stable aerobic execution, and FTP starts from the 225 W you stated on 1 November and rises only as completed training justifies.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This seven-week block builds the aerobic durability, cadence efficiency and general
strength that everything later rests on: the Atlas Mountain Race at the end of February, the April brevet
series and Paris-Brest-Paris in August. Your recent record — a three-hour race at 187 bpm average, a
strength session that became a squat-and-pole-vaulting load with heart rate spiking to 150 bpm, and a well-
controlled 2 h 05 min hike at 114 bpm — shows good aerobic discipline at low intensity but a tendency to add
unplanned high load on top of it. So almost all riding stays below 140 bpm with cadence above 85 rpm from
the first minute, strength is a separate logged low-load session that you either complete fully or
deliberately cut, and missed minutes are dropped rather than recovered. Because you can hold structure for
roughly four months at a time, this is the first of a chain of short single-purpose blocks with planned
resets, which keeps each one fresh enough to finish. Week 3 introduces the first controlled sustained-power
work only after Week 2's steady aerobic execution, Week 4 deloads, and volume then grows to 6.5-7.5 hours in
Weeks 6-7. FTP stays at the 225 W you stated on 1 November until sustained power data says otherwise.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week served its purpose: strength A on Tuesday, a Wednesday double of 15 minutes of
rowing plus a 32-minute easy run, strength B on Friday, and a 2 h 05 min hike on Saturday at 114 bpm average
that stood in for the planned 90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling,
and Thursday's trainer ride was the only session missed, so fatigue is low and nothing needs to be made up.
Sunday closes the week with 30 easy minutes instead of a replacement ride, so you arrive at Week 3's first
controlled sustained-power work fresh. The one thing still untrained is cycling cadence: neither the hike
nor the strength days gave you cadence-above-85-rpm work, and that habit carries into Week 3, because
repeatable efficiency at low intensity is what carries you through the long days in Morocco and the 200 km
brevet in April.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled sustained-power work. Thirty easy
minutes maintains the weight-bearing aerobic fitness and running economy that support the long hike-a-bike
and bike-carrying sections of the Atlas Mountain Race in February, and it costs almost nothing in fatigue
the day after a 2 h 05 min hike. It stays indoors because rain and 7 m/s gusts are forecast all day, and the
115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "This run keeps your weight-bearing aerobic fitness and running economy alive,
which is exactly what carries you through the pushing and carrying sections in Morocco and keeps running
usable as winter cross-training toward the April brevet. It is also the week's only running stimulus and
adds a small amount toward the week's roughly 240 TSS. The cost of skipping it is low in absolute terms
because the week's cycling and strength work is already banked, but you would lose the only running-specific
work of the week, which takes longer to rebuild later.",

meta/muse-spark-1.1

Meta: Muse Spark 1.1

10.3/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	A+	B	24.3 s	$0.0686	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00660	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 1.9/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean and the today object matches the planned Friday gym session on 2026-10-30 with correct type, intensity, duration, indoor flags, FTP and TSS. The exercise list is well sequenced for this athlete: glute bridges, elevated hinge, a capped split squat, lat pulldown with the logged loads, Pallof and side plank, with rest periods and a heart-rate gate before sets. The description adds useful stop conditions for rounding of the low back and sharp quad burn, though it does not state an RPE target and the 40-50 kg rack pull starting load is an unflagged assumption. The rationale ties the session to hip-hinge durability and fat-loss goals and states the cost of skipping, but it is somewhat generic about the weekly load target. Season revision: The response names Atlas throughout the season, keeps block 1 starting on 2026-10-21, and tiles the seven season blocks correctly through 2027-08-22 with the Atlas race placed inside a dedicated block. However, block 1 is barely changed from the supplied version, with only the FTP values and a rewritten rationale differing, so the Atlas adaptation does not really reach the current block. The later blocks run brevet and PBP-style builds for roughly 16 weeks without a reset, which conflicts with the athlete's stated four-month ceiling, and terms such as night riding and hike-a-bike are introduced without athlete support. The current week and today's session are coherent and correctly leave tomorrow and the next week and block null, but today's rationale was rewritten beyond what the supplied planned workout allowed.

x-ai/grok-4.6

SpaceXAI: Grok 4.6

10.3/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	C	C	205.1 s	$0.1370	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00659	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The response is clean JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, and 30 TSS, matching the planned Friday gym session. The exercise list is well chosen for the hinge and back-protection goals, with explicit sets, reps, rest, form cues and stop conditions, and it respects the two-set split squat limit from the coach feedback. Weaknesses: the chest-supported row load is only loosely anchored to last week's pulldowns, the 3x12 bridge progression is conditional and vague, and the rationale does not mention the week's goblet squat volume, which belongs to the other gym day. Season revision: The answer names Atlas throughout the season goal, season rationale, and the new AMR blocks, keeps block 1 starting on 2026-10-21, returns tomorrow, nextWeek and nextBlock as null, and tiles the season blocks without gaps. Its weaknesses are that block 1 is largely the old block with only the rationale and some target-load wording changed, the season ends on 2027-04-04 so Paris-Brest-Paris in August 2027 appears only as a sentence in the goal rather than as planned work, and the Wednesday session was merged and retitled even though the rest of the week was meant to stay as supplied. Today's session is coherent with the week and grounded in the athlete's HR and indoor constraints, though flipping optional to true is a judgment call the rationale only partly supports.

    "bikeWorkout": null,
```

```
    "description": "Gym Strength B at your well-equipped gym. Keep every working set controlled and take a full 90–120 seconds of rest so your heart rate drops below 110 bpm before you start the next set. Do not add load if your lower back or form wavers.\n\nWarm-up (8 min): 5 minutes easy walk or gym bike, then 8 cat-cows, 8 bodyweight glute bridges, and 6 slow broomstick or empty-bar hip hinges to knee height with a flat back.\n\nMain:\n1) Elevated rack or trap-bar pulls with the bar at knee height: 2 light rehearsal sets of 5, then 3 working sets of 8. Use a conservative load that lets you keep a perfectly flat back and the bar close to your body (empty bar or a light trap-bar load if unsure). Hinge from the hips; do not round or yank. If any set bothers your back, drop the load immediately or stop that exercise.\n2) Bodyweight split squats: 2 sets of 8 per leg only, no extra load. Front knee tracks over mid-foot, torso tall, 2-second lower. Stop at 2 sets even if they feel easy — your quads are still adapting after Tuesday's goblet squats.\n3) Chest-supported or seated cable row: 3x10–12 at a moderate effort similar to last week's 40–50 kg lat pulldowns. Squeeze the shoulder blades; no torso swing.\n4) Glute bridge or hip thrust: 3x12. Add a light dumbbell or plate on the hips only if last week's bodyweight 3x12 still feels easy.\n5) Dead bug: 3x8 per side, low back pressed to the floor, slow.\n6) Side plank: 3x20–25 s per side.\n\nFinish with your daily 8-minute hip/spine mobility circuit (unrecorded): about 90 seconds each of couch stretch or low lunge with hips pushed forward, standing forward fold with soft knees gradually straightening toward the floor, 90/90 hip rotations, deep squat hold with heels down, supine figure-4, and cat-cow.",
    "optional": false,
    "optionalRationale": "This is the week's second gym dose and the only session that rebuilds a safe hip hinge with elevated rack/trap-bar pulls plus two bodyweight split-squat sets. That hinge and posterior-chain control is what lets you sit more aero without sit-bone blisters and climb without a tired back — the core flexibility and strength you need for long brevets and PBP. Skip it and you lose half of this week's strength stimulus and delay the hinge progression Week 2 builds on."
  }
}
```

SEASON REVISION

9.4/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
145.8 s	**$0.0860**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Judgment: The answer names Atlas throughout the season goal, season rationale, and the new AMR blocks, keeps block 1 starting on 2026-10-21, returns tomorrow, nextWeek and nextBlock as null, and tiles the season blocks without gaps. Its weaknesses are that block 1 is largely the old block with only the rationale and some target-load wording changed, the season ends on 2027-04-04 so Paris-Brest-Paris in August 2027 appears only as a sentence in the goal rather than as planned work, and the Wednesday session was merged and retitled even though the rest of the week was meant to stay as supplied. ```
{
  "season": {
    "goal": "Arrive at the Atlas Mountain Race on 28 February 2027 with durable aerobic endurance, efficient climbing cadence, and enough strength for long mountain days, then recover in time to finish a 200 km brevet comfortably in April 2027, with Paris-Brest-Paris in August 2027 as the next horizon.",
    "rationale": "You have an ultra-distance A-event in four months, a 200 km brevet six weeks after that, and a history of losing disciplined progress after about four months. This season therefore peaks at the Atlas Mountain Race rather than stretching one continuous build all the way to Paris-Brest-Paris. The opening block rebuilds aerobic control, cadence above 85 rpm, and low-load strength. Winter then keeps cycling specific while skiing and easy running add durability without stacking fatigue. January and February convert that base into long, well-fuelled mountain endurance, then a short taper into 28 February. March is recovery and easy brevet practice, not another peak, so you can finish the 200 km without repeating the fade. Frequent deload weeks and mixed modes are how you stay inside that four-month window.",

Meta: Muse Wonder

10.3/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	D	35.8 s	$0.2245	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00666	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.1/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate returns a clean today object that matches the planned 45-minute moderate gym session on 2026-10-30, with status planned, outdoor and canBeOutdoor set to false, the 220 W FTP and the 30 TSS. The exercise selection follows the block's safe hinge progression: elevated rack or trap-bar pulls, two bodyweight split-squat sets, rows, glute bridges, Pallof presses and planks, with explicit sets, reps, rest, heart-rate start gate and stop conditions for the back. Weaknesses are that the mobility circuit is restated loosely ('as tolerated within the circuit') and the description ends with a nutrition aside that is not part of the session. Season revision: The response returns the eight required top-level keys, keeps block 1 starting on 2026-10-21, tiles the remaining season contiguously to 2027-08-31, and names Atlas throughout the season, block and rationale. Its main weakness is that the current block is barely changed: the name, focus and seven weeks are identical to the supplied plan, and only the block rationale gestures at Atlas, so Atlas preparation is not really built into block 1 itself. Some details are invented or weakly grounded, such as night-ready pacing for Paris-Brest-Paris and the assumed August end date, though the end-date assumption is at least stated. The current week and today's session are coherent with the supplied history and keep the FTP at 225 W, but there is no concrete Atlas-specific detail in the week itself. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "You are building a safe hip hinge and single-leg control without loading your vulnerable back from the floor. Warm up 5 minutes easy on a gym bike, then do your 8-minute mobility circuit: 90 seconds each of couch stretch/low lunge per side as tolerated within the circuit, standing forward fold with soft knees, 90/90 hip rotations, deep squat hold holding support if needed, supine figure-4, and cat-cow. Main work, resting 90-120 seconds between sets and starting each set only when your heart rate is below 110 bpm: 1) Knee-height rack pull or trap-bar pull from elevated blocks, 3 x 8 at an easy-moderate effort where you could do 4 more reps, flat back, ribs down, push the floor away and stop if your back rounds or aches. 2) Bodyweight split squat, 2 x 6 per side, slow 3-second lowering, torso tall, front knee tracking over your toes; hold support for balance if needed and stop short of quad burn that changes your form. 3) Cable or machine row, 3 x 10 at a moderate effort, squeeze your shoulder blades without shrugging. 4) Loaded glute bridge, 3 x 12, 2-second pause at the top without overextending your lower back. 5) Pallof press, 3 x 8 per side, ribs down and hips still. Finish with 2 x 30 seconds plank, stopping a set if your lower back sags. Keep every lift controlled rather than heavy today. Afterwards, have a protein-rich meal or snack and plenty of vegetables and fluid to support recovery without a post-work hunger spike.",
    "optional": false,
    "optionalRationale": "This session builds the elevated hip-hinge strength, glute power, and anti-rotation core control that protect your back on long climbs, improve your cycling posture, and reduce sit-bone pressure on the long rides you need for your brevet series and Paris-Brest-Paris. It is also a key fat-loss session because preserving and building muscle helps you lose fat steadily while keeping your aerobic work easy. If you skip it, you lose this week's only dedicated hinge progression and delay the back resilience that every later strength and endurance block depends on."
  }
}
```

SEASON REVISION

9.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
24.0 s	**$0.1432**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.1/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.3/2

Judgment: The response returns the eight required top-level keys, keeps block 1 starting on 2026-10-21, tiles the remaining season contiguously to 2027-08-31, and names Atlas throughout the season, block and rationale. Its main weakness is that the current block is barely changed: the name, focus and seven weeks are identical to the supplied plan, and only the block rationale gestures at Atlas, so Atlas preparation is not really built into block 1 itself. Some details are invented or weakly grounded, such as night-ready pacing for Paris-Brest-Paris and the assumed August end date, though the end-date assumption is at least stated.   "season": {
    "goal": "Complete the Atlas Mountain Race starting 28 February 2027, comfortably finish a randonneur brevet series beginning with a 200 km brevet in April 2027, and then complete Paris-Brest-Paris in August 2027 with durable aerobic endurance, efficient cadence, climbing strength, and repeatable long-ride pacing and fueling.",
    "rationale": "You have three long-distance targets in sequence, so your season is built in sustainable waves rather than one continuous build that risks fading after four months. You first build aerobic durability, cadence above 85 rpm, and low-load strength, then add winter cycling specificity and back-to-back endurance for the Atlas Mountain Race on 28 February 2027. A genuine recovery and reset follows before you rebuild for the April 200 km brevet and the longer brevet series, because protecting consistency matters more for you than chasing uninterrupted progression. Your final build converts that brevet durability into Paris-Brest-Paris-specific long riding, night-ready pacing discipline, fueling at 60-90 g carbohydrate per hour, and back-to-back load, followed by a taper. You did not give an exact August date for Paris-Brest-Paris, so this season conservatively runs to 31 August 2027 to cover it.",

    "title": "Short Easy Aerobic Run",
    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 steps per minute. Keep the effort conversational from the
first minute and let pace fall away rather than pushing heart rate up on any incline. Indoors because rain
and 7 m/s gusts are forecast through the day.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "This run builds the low-cost aerobic durability that supports your cycling through
winter, but skipping it costs you very little toward the Atlas Mountain Race because your Saturday hike
already gave you over two hours of controlled aerobic work this week. That small cost is acceptable today if
your legs feel heavy, because arriving fresh for Week 3's threshold stimulus matters more.",

anthropic/claude-opus-4.8

10.3/12.5

Anthropic: Claude Opus 4.8

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	A	E	68.6 s	$0.3579	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00648	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns only the requested today object with the correct date, planned status, 45-minute moderate indoor gym workout, outdoor and canBeOutdoor flags, TSS and FTP, and bikeWorkout null, so it fits the contract and plan. The session is sensibly built around the elevated hinge, two split-squat sets, anti-rotation and anti-extension core work, with rest intervals tied to the athlete's heart-rate recovery cue and the mobility circuit. Weaknesses: the pull and press loads are only described as light with no concrete starting load or progression rule, and goblet squats from the block's Week 1 guidance are not mentioned. The rationale is specific to the back-pain and saddle-pressure goals and states what is lost by skipping, though it leans slightly on claims like being the first loaded hinge of the block. Season revision: The candidate names the Atlas Mountain Race throughout the season, block names and rationale, keeps block 1 starting on 2026-10-21, and the later season blocks tile correctly to 2027-04-04 with a sensible taper into the 28 February race. Block 1 is only lightly changed (mainly Week 3 gains a threshold block), and the rationales use change-narrating phrasing such as now centres and now introduces, which the prompt discourages. The week sessions are concrete for the completed days and today's run is detailed, but the 70 TSS on a 15-minute rowing session is inflated and the Tuesday and Friday titles are bare letters. PBP is acknowledged only in the remarks and is not planned within the supplied season end, which is a partial gap against the new goal.

TODAY PLAN

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B, the second of your two conservative gym sessions this week. Warm up 5
min on the stair machine or easy walk, then your hip/spine mobility drills. Main work, resting a full 90–120
s between sets so your heart rate drops below 110 bpm before each set: (1) Knee-height rack pull or trap-bar
pull, 3x6 at a light, controlled load — focus on a flat-back hip hinge, bracing the core, no rounding; start
light since this is the first loaded hinge of the block. (2) Bodyweight split squats, 2 controlled sets of
8/leg — keep these to two sets to protect your still-adapting quads. (3) Half-kneeling single-arm cable or
band press (anti-rotation Pallof variant), 3x10/side. (4) Dead bug, 3x10/side, slow and controlled for anti-
extension core. (5) Side plank, 2x20–30 s/side. Finish with your 8-minute hip and spine mobility circuit
(couch stretch, forward fold, 90/90, deep squat hold, figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the safe, braced hip-hinge pattern and anti-rotation/anti-
extension core strength that directly fixes your back pain on long climbs and the saddle weight problem —
the exact posterior-chain and core resilience that must be in place before you can load squats and hinges
harder this winter and ride 200–1200 km brevets pain-free. It is the only loaded hinge work in the week, so
skipping it stalls the rack-pull progression that this whole block is built to protect, and leaves your
lower back under-prepared going into Week 2's heavier gym days."
  }

```
{
  "season": {
    "goal": "Build durable long-distance cycling fitness for a demanding 2026-27 season: ride the Atlas
Mountain Race (28 February 2027), complete a 200 km randonneur brevet in April 2027, and prepare toward
Paris-Brest-Paris in August 2027, with steady pacing, deep aerobic endurance, efficient cadence, and
strength for hilly, loaded terrain.",
    "rationale": "The season now centres on the Atlas Mountain Race on 28 February 2027 as the first major
objective, with the April 200 km brevet as a confidence and pacing checkpoint and Paris-Brest-Paris in
August as the longer-term target. Because you have told me you can only sustain disciplined training for
about four months before motivation or consistency fade, the plan front-loads the most important adaptations
and keeps each block purposeful rather than drawn out: aerobic durability and low-load strength first, then
winter cross-training that protects cycling specificity, then a focused endurance and sustained-power build
that peaks the bikepacking-specific durability you need for the AMR. Recent training shows you absorb
controlled aerobic riding and long hikes well but spike fatigue sharply with unplanned races and leg-heavy
strength, so load is managed conservatively and intensity is introduced only once aerobic execution is
stable. The AMR is a long, self-supported mountain event, so long back-to-back riding, climbing cadence, and
fueling practice are emphasised in the final build. After the AMR the plan transitions to brevet-specific
pacing for April, keeping fitness alive toward PBP.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block lays the aerobic and structural foundation for a season that peaks at the Atlas
Mountain Race in late February, so the priority is durable low-intensity volume, cadence efficiency above 85
rpm, and tolerable full-body strength rather than early intensity. Week 1 carried far more load than
intended (the three-hour race at 187 bpm plus pole-vaulting and strength work, roughly 587 TSS), so the
rebuild stays conservative: Week 2 kept every aerobic effort under 140 bpm and closes low. Week 3 now
introduces a single controlled threshold stimulus because Week 2's execution was clean, then Week 4 deloads.
Given your four-month disciplined-training ceiling, this block deliberately avoids burning motivation on
junk volume: each session has a clear aerobic, cadence, or strength purpose, strength is logged separately
so leg load is managed, and missed minutes are not chased. The 225 W FTP baseline holds because no fresh
sustained-power evidence justifies a change.",

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid, uses the requested today object with the correct date, planned status, moderate workout type, 45 minutes, indoor gym flags, 220 W FTP and TSS 30, and it correctly avoids marking an activity as completed. The session is a sensible second strength day with elevated pulls, lat pulldowns, split squats, bridges and Pallof presses, and it includes a rest interval, heart-rate gate and back-stop instruction. Weaknesses are that the loads are only described as light with no RPE or reps-in-reserve guidance, the description does not reference the athlete's earlier quad-burn feedback when choosing volume, and the rationale is solid but somewhat generic about the season goal. Season revision: The response names Atlas throughout the season, the block focus and the rationale, keeps block 1 starting on 2026-10-21, and returns the eight required keys with seven week sessions and a matching today session. The season blocks tile contiguously to 2027-08-31 and preserve the April brevet and Paris-Brest-Paris, with the Atlas build, taper and post-race recovery placed sensibly. Weaknesses: block 1 weeks 2 to 7 are largely unchanged, so the Atlas adaptation in the current block is mostly a relabel of focus and rationale rather than a real redesign, and the four-week Atlas endurance build is compressed. Today's rationale is also reworded rather than kept, and the week rationale partly narrates the prior week instead of stating the plan as it stands.

10.2/12.5

MoonshotAI: Kimi K2.7 Code

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	B	148.1 s	$0.0479	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00687	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, the today object matches the 2026-10-30 Friday gym session with status planned, 45 minutes, moderate intensity, indoor, FTP 220 W and TSS 30, and no bikeWorkout is correctly null. The exercise prescription is specific with sets, reps, rest, tempo and a heart-rate recovery gate that respects the athlete's back and hip limits. However, it drops the goblet squat progression that the week plan asks to hold at three sets, and the volume of roughly twelve exercise blocks with 90 to 120 second rests looks tight for 45 minutes. The rationale names the posterior-chain and single-leg purpose and what is lost by skipping, though it links less explicitly to the fat-loss goal. Season revision: The season tiles cleanly from 2026-10-21 to 2027-08-31 with Atlas named in the block names and goal, a post-Atlas reset, the April 200 km brevet, and the four-month reset logic, and block 1 keeps its 2026-10-21 start with tomorrow, nextWeek and nextBlock correctly null. Weaknesses: block 1 itself changes little for Atlas beyond wording and a threshold stimulus in week 3, the already-completed sessions were edited (Wednesday merged into a 47-minute double, the hike's duration and TSS changed), and the week 2 target load (260-285 TSS) does not match the week's own session TSS sum of about 233. The August 31 season end is an invented date, though it is disclosed as a conservative assumption.

strength stimulus for the week. After a 5-minute general warm-up (light row or walk), do 2 sets of 10
bodyweight box squats to a bench to groove hip motion. Main work: elevated knee-height rack pulls or trap-
bar deadlifts, 3 sets of 8 reps with a light load you can move with a perfectly flat back and controlled
tempo (2 seconds up, 2 seconds down), resting 90–120 seconds so your heart rate drops below 110 bpm before
each set. Then bodyweight Bulgarian split squats, 2 sets of 8 reps per side, focusing on an upright torso
and controlled descent; stop if quad burn becomes sharp. Follow with 3 sets of 10 seated cable rows at a
moderate load, 3 sets of 10 dumbbell overhead presses, and finish with core: 3 sets of 10 Pallof presses per
side and 3 sets of 30-second front planks. Close with your 8-minute hip and spine mobility circuit. The goal
is posterior-chain and single-leg resilience to support an eventual lower, more comfortable cycling
position, not to lift heavy today.",
    "optional": false,
    "optionalRationale": "Skipping this session removes the only dedicated hip-hinge and single-leg strength
stimulus this week. You would delay the lower-back and hip-flexor adaptations that let you ride longer with
less sit-bone pressure, and you would enter next week with less stability for the run/walk and row
sessions."
  }

SEASON REVISION

9.6/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
111.9 s	**$0.0340**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.4/2

Judgment: The season tiles cleanly from 2026-10-21 to 2027-08-31 with Atlas named in the block names and goal, a post-Atlas reset, the April 200 km brevet, and the four-month reset logic, and block 1 keeps its 2026-10-21 start with tomorrow, nextWeek and nextBlock correctly null. Weaknesses: block 1 itself changes little for Atlas beyond wording and a threshold stimulus in week 3, the already-completed sessions were edited (Wednesday merged into a 47-minute double, the hike's duration and TSS changed), and the week 2 target load (260-285 TSS) does not match the week's own session TSS sum of about 233. The August 31 season end is an invented date, though it is disclosed as a conservative assumption.

```
{
  "season": {
    "goal": "Build long-distance cycling durability for the Atlas Mountain Race on 2027-02-28, arrive able
to comfortably complete the April 200 km brevet and the spring randonneur series, and keep a sustainable
base toward Paris-Brest-Paris in August 2027 without overrunning the athlete's realistic four-month
disciplined-training window.",
    "rationale": "The season now prioritises ultra-endurance cycling first, with strength as support and
skiing or running as low-cost aerobic cross-training. Because disciplined progress has historically lasted
no more than about four months, the year is split into clear commitments with deliberate resets after the
Atlas Mountain Race and again after the April brevet period rather than one uninterrupted build. The current
block stays aerobic-first because recent training shows good low-intensity control but also sporadic high-
load spikes from a three-hour race and extra strength work; efficient cadence, repeatable sub-140 bpm
riding, fueling practice, and durable strength are the qualities that later support long off-road racing,
200 km brevets, and PBP. The exact August date for Paris-Brest-Paris is not stated, so the season horizon is
set conservatively to 2027-08-31.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block is the right start for an Atlas-to-brevet-to-PBP season because the limiting
factor is not top-end power but repeatable aerobic output, pedalling efficiency, fueling tolerance, and the
ability to keep training after the first hard months. Week 1 produced much more load than planned through
the three-hour race, extra activity, strength and pole-vaulting work, a controlled easy ride, and the long
hike, so the block keeps intensity conservative rather than chasing missed minutes. Week 2 showed good
heart-rate discipline but not enough cycling-specific cadence work, so cadence above 85 rpm from the first
minute remains a core skill before threshold volume grows. A single controlled threshold stimulus is
appropriate only after stable aerobic execution, followed by the planned deload; that shape protects
consistency toward 2027-02-28 while leaving room for the April brevet and the later PBP build. The 225 W FTP
baseline stays because there is no fresh sustained-power evidence to justify moving it.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered low-fatigue aerobic work without the planned cycling cadence
stimulus: Tuesday and Friday strength sessions were completed, Wednesday combined a short row with an easy
run, Thursday's trainer ride was missed, and Saturday's 2 h 05 min hike at 114 bpm average replaced the 90-
minute indoor endurance ride with well-controlled aerobic effort. Every recorded aerobic session respected
the 140 bpm ceiling, so fatigue is acceptable and the correct close is today's short optional run rather
than a make-up ride. Missed minutes are not recovered, because the next useful step toward the Atlas
Mountain Race and April brevet is fresh execution of Week 3's first controlled threshold stimulus. The
week's remaining technical priority is cadence above 85 rpm from the first minute of the next ride, since
smooth repeatable pedalling is what preserves power late in a 200 km day.",

pass	$0.00642	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.7/2 · Design 2.3/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean and matches today's date, planned status, 45-minute moderate gym session, non-outdoor flag and 220 W FTP, with the plan's two split-squat sets and a hinge-focused structure respected. The rationale is grounded in the athlete's reported quad burn and the weekend aerobic work, and it states what is lost by skipping. The description is concise and includes a back-pain stop rule and rest guidance, but it gives no load progression or RPE target and says only keep loads comfortable, which is vague for an athlete who wants exact sets, reps and loads. Season revision: The response names Atlas in the season goal and blocks, keeps block 1 starting on 2026-10-21, and revises weeks 2 to 7 with a changed block rationale, so the hard requirements are met. The season tiles contiguously from 2026-10-21 through 2027-08-31 with a credible Atlas build, two-week taper, post-race recovery and brevet and PBP phases. Weaknesses: the block name and rationale never name Atlas, the rowing day TSS drops from 70 to 37 without explanation, the season end date of 2027-08-31 is assumed rather than supplied, and today's description is largely a copy of the supplied one with the weather note reworded.

x-ai/grok-4.5

SpaceXAI: Grok 4.5

10.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	B	99.6 s	$0.0979	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00974	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.5/2

Combined judgment: Today plan: The response is valid JSON with only the requested today object, and it correctly keeps the planned Friday gym session as a 45-minute moderate workout with TSS 30, FTP 220 W, outdoor false and canBeOutdoor false. The exercise selection matches the plan's hinge and split-squat constraints and reflects the athlete's back and hip issues, with sets, reps, rest periods and a stop condition for split squats. Weaker points are the vague load prescription ('about 40-50 percent of what feels heavy' with no reference load) and the rationale, which is sound but leans on generic claims about blisters and posture rather than tying the session to the block's specific progression targets. Season revision: The response names Atlas throughout the season, block and week, keeps block 1 starting on 2026-10-21, and genuinely re-focuses that block toward ultra-distance durability, so the core mechanical requirements are met. The season tiles contiguously from 2026-10-21 to 2027-04-04 with correct week counts, and tomorrow, nextWeek, nextBlock and bodyMetrics are handled as required. Weaker points: the season spans roughly five and a half months of continuous work without explicitly addressing the athlete's four-month ceiling beyond labelling phases, the brevet series between Atlas and Paris-Brest-Paris is thin, and the Atlas taper sits in a short block ending after the race. The current week and today's session are coherent and grounded in the logged activities, but the detail for the remaining week is limited since only the current week's sessions exist.

TODAY PLAN

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "45-minute Gym Strength B session focused on safe posterior-chain hinge mechanics and
unilateral leg work to protect your lower back while building the hip strength and core stability needed for
a more aerodynamic cycling posture and blister-free long rides. Warm-up (5 min): 2 min easy bike or row + 10
bodyweight glute bridges + 10 cat-cows. Main circuit (3 rounds, 90–120 s rest between sets so HR drops below
110 bpm): (1) Elevated knee-height rack or trap-bar pulls 3×8 @ light load that keeps a perfectly flat back
(start ~40–50 % of what feels heavy); (2) Bodyweight rear-foot-elevated split squats 2×8/leg (stop if quad
burn becomes sharp); (3) Single-arm dumbbell row 3×10/side @ moderate weight; (4) Dead-bug or bird-dog
3×8/side slow and controlled; (5) Side plank 3×20–25 s/side. Cool-down: 5 min easy walk + the daily
unrecorded 8-minute hip/spine mobility circuit (couch stretch, forward fold, 90/90, deep squat hold, figure-
4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session directly builds the elevated hip-hinge pattern and unilateral
stability that let you hold a lower, pain-free position on the bike and eliminate sit-bone blisters and
climbing back ache—the exact qualities required for comfortable 200 km+ brevets and ultimately PBP. Skipping
it delays the safe loading progression your back needs and leaves the posterior chain under-prepared for the
volume that arrives in later blocks, slowing both fat-loss consistency and long-ride durability."
  }

{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 with durable ultra-endurance fitness,
efficient cadence, and strength for loaded riding, then comfortably complete a 200 km brevet in April 2027
as the first of a randonneur series, while building the base for Paris-Brest-Paris in August 2027. Training
is structured in sustainable phases of at most about four months to match your history of consistent
progress.",
    "rationale": "Atlas Mountain Race is now the primary A-goal inside this season, so the year is built
backward from late-February ultra-distance demands: aerobic durability, steady power on long climbs,
fueling, and strength for hike-a-bike and loaded handling. The April 200 km brevet sits as a controlled
checkpoint three to four weeks after AMR recovery, and Paris-Brest-Paris remains the long horizon that
rewards the same aerobic engine. Because disciplined blocks have historically held for roughly four months
or less, each phase is kept purposeful and time-boxed, with clear recovery weeks and no filler intensity, so
you can sustain progress from the October base through February without burnout.",

    "focus": "Build aerobic durability, efficient cadence above 85 rpm, and low-load strength without
stacking fatigue, as the foundation for Atlas Mountain Race",
    "rationale": "Ultra-distance success in the Atlas Mountains rests on a wide aerobic base, repeatable
cadence under fatigue, and enough strength for hike-a-bike and loaded handling. This seven-week block
therefore prioritises controlled heart-rate aerobic work, cadence from the first minute of every ride, and
two short full-body strength sessions per week at low systemic cost. Week 1 already delivered a high
realised load from the Zwift race and extra activity, so the progression stays conservative: Week 2 finishes
as a low-fatigue rebuild, Week 3 adds one controlled threshold stimulus only if aerobic execution stays
clean, Week 4 deloads, then Weeks 5–6 raise endurance volume toward the winter block while strength remains
maintenance-only. The 225 W FTP baseline is held until sustained power data justifies a change, and every
session must earn its place toward February durability rather than fill the calendar.",

Z.ai: GLM 5.1

10.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	D	D	331.1 s	$0.1927	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00687	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned, indoor, 45-minute moderate gym workout with TSS 30 and an FTP of 220 W, matching the current week and the Gym Strength B session referenced in the coach replies. The exercise selection is sensible for this athlete (elevated pulls, two split-squat sets, bridges, Pallof work) and the description gives sets, reps, rest, HR gating below 110 bpm, form cues and a back-discomfort fallback, though it does not state a progression rule beyond starting light. The rationale is specific to the posterior chain and sit-bone position, but it does not tie the session to the fat-loss goal or the evening-hunger concern that the block is built around. Season revision: The season is rebuilt around Atlas on 28 February 2027, PBP in August 2027 and the April brevet, and the nine blocks tile contiguously from 2026-10-21 to 2027-08-31 with block 1 starting correctly. Tomorrow, nextWeek and nextBlock are correctly left null and bodyMetrics is correctly empty. However, block 1 is barely changed from the supplied version: its name, focus, weeks and targets are essentially the same, with only the rationale naming Atlas, so the current block does not visibly accommodate the new goal. The current week and today's session are coherent but add little Atlas-specific preparation beyond generic cross-training language. The response also includes the extra coachQuestion and modelsRemarks keys, which is consistent with the base contract but not with the narrower key list in the revision request. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B — Safe Hinge Progression & Posterior Chain Stability\n\nWarm-up (5
min):\n• 3 min light cardio (treadmill walk, bike, or rower at easy effort)\n• 10 cat-cow with slow spinal
movement\n• 8 bodyweight hip hinges with hands on hips, focusing on flat back and pushing hips back\n\nMain
Sets (rest 90–120 sec between sets; let HR drop below 110 bpm before each set):\n\n1. Elevated Rack Pulls or
Trap-Bar Pulls (bar at knee height) — 3 × 8 reps\n   Start light (40–50 kg trap-bar or empty barbell on rack
pins). Focus on flat back, pushing hips back to the wall behind you, and squeezing glutes at the top. If any
lower-back discomfort, reduce the load or raise the bar one pin higher.\n\n2. Bodyweight Split Squats — 2 ×
8–10 per leg\n   Hold a support if needed for balance. Keep torso upright, front knee tracking over toes,
back knee dropping toward the floor. Controlled tempo: 2 sec down, 1 sec up.\n\n3. Glute Bridge (feet
elevated on bench or add resistance band above knees) — 3 × 12\n   Squeeze glutes hard at the top for a 2-
count. Keep ribs down so you don't arch your lower back.\n\n4. Pallof Press — 3 × 10 per side\n   Hold the
extended position for a full 2-count to challenge anti-rotation. Keep hips square.\n\n5. Side-lying
Clamshells (resistance band above knees) — 2 × 12 per side\n   Slow and controlled: open the top knee
without rolling your pelvis back.\n\n6. Plank — 3 × 30–40 sec\n   Straight line from head to heels. If your
back starts to sag, reset or shorten the hold.\n\nCool-down (5 min):\n• 90 sec standing forward fold with
soft knees, gradually straightening\n• 90 sec couch stretch or low lunge with hips pushed forward\n• 90 sec
supine figure-4 glute stretch\n• 60 sec cat-cow\n\nFinish with your daily 8-minute hip and spine mobility
circuit in the evening if not done here.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength and safe hip-hinge mechanics that
protect your lower back during long climbs and heavy work, and directly progresses the glute and hip
stability you need to hold a more aerodynamic, sit-bone-friendly cycling position. Skipping it means
delaying the hinge pattern that lets you eventually load deadlifts and squats safely — the very foundation
for pain-free riding and the 200 km brevet in April."
  }
}
```

SEASON REVISION

9.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

  "season": {
    "goal": "Build the ultra-endurance durability to complete the Atlas Mountain Race (February 28, 2027), a
200 km randonneur brevet (April 2027), and Paris-Brest-Paris (August 2027), with efficient cadence,
sustainable pacing, and the cross-training resilience to maintain training motivation across a ten-month
season.",
    "rationale": "The season spans October 2026 through August 2027 to prepare for three major events: the
Atlas Mountain Race in February, a 200 km brevet in April, and Paris-Brest-Paris in August. The athlete's
history of losing motivation after roughly four months of disciplined training demands built-in variety:
cross-training phases with skiing and running, distinct race targets that reset focus, and recovery blocks
after each major event. The current aerobic-base block establishes the durability foundation; winter
training builds threshold and AMR-specific endurance; post-AMR recovery resets before brevet preparation; a
varied spring-summer phase with cross-training keeps PBP preparation fresh; and the final block peaks
endurance for Paris-Brest-Paris. FTP starts at 225 W and should progress conservatively through consistent
aerobic and threshold work.",

10.2/12.5

Anthropic: Claude Opus 5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
B	B	E	120.6 s	$0.4469	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00666	anthropic/claude-haiku-5.5

Mentions Atlas **pass**

Block 1 changed or Atlas question asked **pass**

Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.6/2

Combined judgment: Today plan: The candidate matches the required today object: correct date, planned status, moderate 45-minute indoor gym workout, outdoor and canBeOutdoor false, TSS 30, FTP 220 W and null bikeWorkout, and it is valid JSON with only the root today key. The session is well built, with a sensible hinge progression from an elevated pull, two light split-squat sets as the plan specifies, glute bridges, Pallof and dead bugs, and explicit rest and heart-rate gating. The rationale is specific to the hinge and anti-rotation goals and the cost of skipping, and the description gives useful load and form cues. Weaknesses are minor: the mobility circuit is stated as 8 minutes but lists six 90-second blocks, and grounding in the athlete's specific feedback such as ankle and foot comments is thin. Season revision: The response names Atlas throughout, rebuilds block 1 with a genuinely changed focus, starts it on 2026-10-21, keeps the season tiled through 2027-04-04, and leaves tomorrow, nextWeek and nextBlock null, with a sensible taper into the Atlas start. It drops Paris-Brest-Paris from the season entirely and explicitly defers it, which breaks a required element of the revision. It also merges the 28 October rowing and run into one session and changes recorded durations and the week 2 load, which alters stored history rather than just refreshing the plan. The coach question about bike setup is ordinary ambiguity that a conservative assumption could have resolved.

```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session at the full gym. Warm-up (8 min): 5 min easy stair machine or walk at <110
bpm, then 10 cat-cow, 10 bodyweight hip hinges with a dowel along your spine (head, upper back and sacrum in
contact throughout), 10 glute bridges. Main work, resting a full 90-120 s between every set so your heart
rate drops below 110 bpm before you start the next one: (1) Elevated rack pull or trap-bar pull from knee
height - 1 x 8 at a very light load to groove the pattern, then 3 x 6 at a load you could do 10 reps with;
brace the core, push the floor away, keep the bar close and the back flat, no rounding, stop the set
immediately if the back position changes. (2) Bodyweight split squat - 2 x 8 per leg, slow and controlled,
front shin vertical, torso tall (hold a rack upright for balance if needed); only two sets to keep your
quads fresh after Tuesday's goblet squats. (3) Loaded glute bridge - 3 x 12 with a light plate or dumbbell
on the hips, 2-second squeeze at the top. (4) Half-kneeling Pallof press - 3 x 10 per side, slow out and
back, no trunk rotation. (5) Dead bug - 3 x 8 per side with the lower back pressed into the floor. Finish
with your 8-minute hip and spine mobility circuit (couch stretch, standing forward fold with soft knees,
90/90 hip rotations, deep squat hold, supine figure-4, cat-cow), 90 s each. Stop the recording before the
mobility work. Eat a protein-rich snack within an hour afterwards to blunt the post-work hunger that drives
evening snacking.",
    "optional": false,
    "optionalRationale": "This is the one session in the week that directly rebuilds the hip hinge and anti-
rotation core strength you need to stop your back aching on long climbs and to let you eventually drop into
a lower, less sit-bone-loaded saddle position for the 200 km brevet in April and Paris-Brest-Paris. The
elevated knee-height pull is the safe entry point of the hinge progression that this block exists to
establish - skip it and the whole chain (heavier rack pulls in December, maximal strength in late winter, a
pain-free aerodynamic posture by spring) starts a week late, and you keep the back that fatigues in crouched
positions. The two light split-squat sets and the glute bridges also protect your knees and give your legs
the single-leg stability your beginner running progression needs before the 5 km on 5 May. It is only 45
minutes at a controlled, sub-threshold effort, and the long rests mean it costs you nothing for tomorrow's
two-hour hike."
  }
}
```

SEASON REVISION

8.9/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
101.8 s	**$0.3041**	**no**	**yes**	**200**	**stop**

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 as a self-supported ultra-distance ride,
then use the April 200 km brevet as the first durable step of the randonneur series toward Paris-Brest-Paris
in August 2027.",
    "rationale": "The Atlas Mountain Race on 28 February 2027 is 17 weeks away, which sits exactly inside
the roughly four-month window in which you have historically been able to hold disciplined training, so the
whole season is built to peak once, on that date, without an early burnout. Multi-day self-supported racing
is decided by aerobic durability, fuelling, pacing discipline and the ability to ride long again the next
day rather than by top-end power, so the emphasis is on steadily growing weekend duration, back-to-back
riding, loaded-bike work, climbing cadence and kit rehearsal, with only modest tempo and threshold work to
protect efficiency. Your recent pattern — a three-hour race at 187 bpm average, extra strength and pole-
vaulting load, then a clean low-intensity rebuild week — shows you absorb easy volume well but accumulate
fatigue fast when intensity is added opportunistically, so intensity stays limited and deliberate. The base
block raises aerobic consistency and low-load strength, the winter block converts that into long loaded
rides and overnight/cold-weather competence, the final build adds the biggest back-to-back days and off-road
handling, and a two-week taper leaves you fresh for the start. After the race, recovery comes first and the
April 200 km brevet is approached as a controlled return rather than a second peak, which also leaves a
healthy platform for the PBP campaign later in 2027.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build durable aerobic fitness, hold cadence above 85 rpm, and establish low-load full-body
strength for loaded riding without stacking fatigue",
    "rationale": "With the Atlas Mountain Race 17 weeks out, this block exists to make long, repeatable
riding cheap in fatigue terms: a strong low-intensity engine, a comfortable 85-95 rpm pedalling habit and a
basic strength base that will carry a loaded bike over rough ground. Week 1 ran to roughly 587 TSS because
of the three-hour race and the unplanned strength and pole-vaulting work, so volume is rebuilt from a
conservative base rather than pushed. Week 2 was executed cleanly with every aerobic effort under 140 bpm,
which means there is room to extend weekend duration from here, but the cadence-specific trainer work was
the missing piece and becomes the first priority on the bike. From Week 3 the weekend ride grows steadily
toward three hours and beyond, one controlled tempo stimulus per week supports sustained power without
raising fatigue much, strength stays light and logged separately, and Week 4 is a genuine deload so the
biggest base weeks in Weeks 5-7 land on fresh legs. The 225 W FTP baseline stands because no threshold test
or sustained power file supports a change, and gains across this block are expected to be small and earned
through consistency.",

    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "This week has delivered its aerobic purpose at a low fatigue cost: two logged strength
sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed Thursday trainer
ride, and a 2 h 05 min hike on Saturday at 114 bpm average that stood in for the planned 90-minute trainer
ride. Every aerobic effort stayed under the 140 bpm ceiling, so you finish the week fresh rather than dug
in, which is exactly the platform needed before volume starts climbing toward Atlas Mountain Race duration.
Missed minutes are not recovered and Sunday stays deliberately short, so the week closes with an easy 30-
minute run instead of a make-up ride. The one unfinished item — cadence above 85 rpm from the first minute
of every ride — carries straight into next week, because efficient, repeatable pedalling at low intensity is
what lets you ride day after day in Morocco.",

    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling.",
      "Swap for a 30-minute easy spin at 120-140 W with cadence above 88 rpm if you would rather have the
pedalling practice."
    ],
    "rationale": "Every aerobic session this week respected the 140 bpm ceiling, so today's job is to close
the week without adding load before volume starts climbing toward Atlas Mountain Race duration from Monday.
Thirty easy minutes keeps the weight-bearing, running-specific durability that supports hike-a-bike and off-
bike work in Morocco, and costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors
because rain and gusts to 7 m/s are forecast all day, and the 115-135 bpm cap keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "This builds low-level aerobic capillarisation and the load-bearing leg resilience
you will need for pushing a loaded bike on the Atlas Mountain Race's rough sections, and it reinforces the
week's target of a controlled, sub-140 bpm finish. Skipping it costs only about 25 TSS of easy aerobic work
at the end of a deliberately light week — the week's key sessions are already banked — so if your legs feel
heavy after Saturday's 261 m of climbing, arriving fresh for Monday's cadence ride is worth more than these
30 minutes.",

  "bodyMetrics": [],
  "coachQuestion": "For the Atlas Mountain Race, do you already have the gravel/bikepacking bike and bag
setup you intend to race on available this winter, so I can schedule loaded rides and off-road handling work
from Week 5 (16 November) onward?",
  "modelsRemarks": "The goal change is substantial: the Atlas Mountain Race is a self-supported off-road
ultra, so the season now peaks on 28 February 2027 with the April 200 km brevet treated as a post-race
return rather than the main target. The season end date is kept at 2027-04-04, so the Paris-Brest-Paris
campaign in August 2027 falls outside this plan and will need a new season once the brevet series is under
way."

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and a 220 W FTP, matching the current week plan's Friday Gym session. The exercise prescription is specific with sets, reps, rest, RPE and a heart-rate gate, and it respects the back-safety constraints, though the 6 minutes of cardio warm-up and the 20 to 30 second side planks are only loosely tied to the plan. The rationale is grounded in the hinge and back goals, but it does not explicitly name the week's 5.0 to 5.5 hour load target beyond a passing mention and says little about what is lost by skipping beyond general statements. Detail is good on stop conditions and load selection, but the description omits a concrete starting load guideline for the pulls and does not state that the 90.7 kg weigh-in is irrelevant to the session. Season revision: The response keeps the eight required top-level keys, starts block 1 on 2026-10-21, tiles the season contiguously through 2027-08-31, leaves tomorrow, nextWeek and nextBlock null, and returns an empty bodyMetrics array. It works Atlas into the season with a dedicated Atlas build, preparation and taper, and keeps PBP and the April brevet. Weaknesses: the current block name, focus and rationale never name Atlas, the 2026-10 to 2027-08 season runs as one long disciplined stretch without a reset near the stated four-month ceiling, the final PBP block is labelled four weeks though its dates span about three, and the Wednesday completed session was merged and retitled rather than kept as recorded.

Xiaomi: MiMo-V2.6-Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	D	A+	483.7 s	$0.00535	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00694	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.5/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is clean, uses the requested today object with the correct date, planned status, workout and moderate enums, 45 minutes, indoor flags and a bike workout of null, matching the outlined Friday gym session. The exercise list is specific and safe, with sets, reps, rest and hip-hinge cues. However, it cuts goblet squats to 2 sets, which departs from the current week plan of 3 steady sets, and it gives no load progression, RPE guidance or fallback for pain. The rationale is specific to the athlete's back, hips and fat-loss goal and states what is lost by skipping. Season revision: The response names Atlas throughout the season, the block focus and the rationale, keeps block 1 starting on 2026-10-21, and builds a credible sequence of Atlas build, two-week taper, race, recovery and brevet series. Its weaknesses are that the final block has six weeks listed for about 6.3 weeks of dates, the season end was moved to 2027-08-31 without a firm basis, and the completed Wednesday rowing and run were merged into one changed session. The coachQuestion about brevet and PBP dates is a reasonable clarification but was resolvable with a conservative assumption, and the weekly and daily rationales are specific and grounded in the 187 bpm race, the 587 TSS week and the 225 W FTP.

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session focused on safely rebuilding your hip hinge and posterior chain while
protecting your lower back. Warm up 8 minutes on the rower or bike plus hip CARs and cat-cow. Then: (1)
Knee-height rack pull or trap-bar pull — 3 sets x 8 reps at a light, controlled load, flat back, drive
```

```
through the hips, full 90–120 s rest so heart rate drops below 110 bpm; (2) Goblet squat — 2 sets x 10 reps
at 12 kg (holding volume down after Tuesday's quad burn), 2 min rest before the second set; (3) Lat pulldown
— 3 sets x 10 reps at 50 kg; (4) Bodyweight split squat — 2 sets x 8 reps per leg, rear foot elevated; (5)
Pallof press — 3 x 10 per side; (6) Plank — 3 x 30 s. Finish with 2–3 minutes of light stretching. Follow
with your unrecorded daily 8-minute hip and spine mobility circuit (couch stretch, standing forward fold,
90/90 hip rotations, deep squat hold, supine figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain and core strength that directly supports
your season goals: the elevated rack pulls safely re-teach the hip hinge you need to hold a lower, more
aerodynamic cycling posture without loading your vulnerable lower back, which is what currently causes your
sit-bone blisters and back ache on long climbs and rides. The Pallof presses and planks build the anti-
rotation core stability that keeps your pelvis stable in the saddle over Paris-Brest-Paris-length days, and
the split squats address the single-leg strength and hip flexibility behind your inability to touch the
floor. Skipping it costs you the progressive strength stimulus that this Autumn Re-Entry block exists to
establish before winter base building, and it would stall your fat-loss goal by removing the lean-muscle
maintenance that keeps your resting metabolic rate and protein-driven satiety up while you cut."
  }

```
{
  "season": {
    "goal": "Reach the Atlas Mountain Race on 28 February 2027 ready for long mountain days over gravel,
then complete a 200 km brevet in April 2027, a randonneur brevet series, and Paris-Brest-Paris in August
2027, while keeping training varied enough to stay consistent beyond the athlete's usual four-month window
of disciplined training.",
    "rationale": "The season is built around the Atlas Mountain Race on 28 February 2027 as the primary
target, with the April 200 km brevet, the brevet series, and Paris-Brest-Paris in August 2027 as the follow-
on goals. From today there are 17 weeks to the AMR, which sits right at the edge of the four-month block of
disciplined training the athlete has historically sustained, so the plan front-loads variety — trainer
riding with cadence blocks, two short strength lifts, easy running, hiking and winter skiing — and breaks
the build into short blocks with distinct identities and visible milestones instead of one long repetitive
grind. Training stays aerobic-first with strict sub-140 bpm ceilings and cadence above 85 rpm until the base
is durable, because the realized load already includes a three-hour race at 187 bpm average plus unplanned
strength and pole-vaulting work that must be absorbed before intensity returns. FTP is held at the athlete's
stated 225 W until sustained power data supports a change. After AMR the season shifts to recovery and
conservative brevet pacing for April, then rebuilds long endurance, fuelling and back-to-back loading for
the brevet series and Paris-Brest-Paris.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue —
the aerobic platform for Atlas Mountain Race climbing",
    "rationale": "This block is the aerobic and strength platform for the Atlas Mountain Race on 28 February
2027: seven weeks from 21 October to 6 December that make low-intensity riding durable and efficient before
any intensity is added. Because the athlete's disciplined training has historically lasted no more than four
months, the block deliberately mixes trainer sessions with cadence blocks, two short strength lifts, easy
running, hiking and weekend outdoor work — variety that keeps adherence alive while the same underlying
quality (repeatable aerobic efficiency under 140 bpm with cadence above 85 rpm) is trained every week. Week
1 delivered roughly 587 TSS including a three-hour race at 187 bpm average and unplanned strength plus pole-
vaulting, so the progression stays conservative: Week 2 holds volume low with strict heart-rate control,
Week 3 may add a single controlled threshold stimulus only if aerobic execution stays stable, Week 4
deloads, and Weeks 5-7 rebuild toward 6-7 hours with one tempo block. FTP remains 225 W because no sustained
power evidence justifies a change.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "This run builds the weight-bearing aerobic durability that keeps your legs
accustomed to running motion through the winter base — the same low-level conditioning that lets you stay
moving during long self-supported days at the Atlas Mountain Race — and it is the final easy stimulus that
closes the week's target load before Week 3 adds a threshold session. Skip it and you lose that closing
aerobic touch and, more importantly, one more completed session in a week already short of a planned ride,
which is exactly the kind of gap that has broken your four-month training streak before.",

unbiased/pareto-26.10

10.1/12.5

Pareto 26.10

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	A	160.0 s	$0.0315	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00703	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.5/2 · Design 2.2/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.6/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned 45-minute moderate gym session with matching date, type, intensity, FTP and TSS, and sets outdoor and canBeOutdoor to false as a gym session should be. The exercise prescription is specific (sets, reps, rest, elevated hinge replacing floor deadlifts, capped split squats), which fits the athlete's back and quad constraints. Weaknesses: the description does not state load progression or an explicit RPE target for the pulls, the optionalRationale leans toward generic benefits rather than the concrete week target, and it does not mention a weight assumption for the lat pulldowns or a fallback if the back aches. Season revision: The season is genuinely re-planned around Atlas on 28 February 2027, with a coherent build, taper, event window and PBP-directed later blocks that tile contiguously, and block 1 correctly starts on 2026-10-21 with the current week and today revised consistently. The current block name, focus and rationale never name Atlas, which weakens the block-level Atlas link, and the season has minor defects: block 5 is labelled three weeks but spans about 2.3 weeks, the taper is labelled four weeks but spans about 3.3, and the Atlas event end and season end of 31 August are invented rather than supplied. Today's indoor 40-minute ride has accurate power percentages that sum to the stated duration and is well justified by the rain forecast, though its optionalRationale contains a muddled phrase about being the only recorded-or-planned cycling session.

```
    "bikeWorkout": null,
    "description": "Gym Strength B (45 min). Warm up with 5 min easy cardio and dynamic hip openers. Main
work: 3x8 light elevated knee-height rack or trap-bar pulls (hinge from the hips with a flat back, ~40-50%
of what feels heavy — technique first), 2x8 bodyweight split squats per leg (keep quads fresh), 3x12 glute
bridges, 3x10 lat pulldowns (build to a challenging but controlled weight), 3x10/side Pallof press, and
3x30s plank. Take 90-120s rest between sets so your heart rate drops below 110 bpm before each set. Finish
with your 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This is the week's second strength session and the first safe exposure to the
elevated hip hinge — the movement pattern that rebuilds your lower-back resilience and lets you hold a more
aerodynamic position on long rides without pain. Skipping it would leave your posterior chain and core
under-stimulated this week, delaying the back-protection progress that Paris-Brest-Paris and the brevet
series depend on, and would also reduce the muscle-preserving stimulus that keeps your fat-loss phase
effective."

    "alternatives": [
      "If your legs feel unusually heavy, ride only 20 minutes at an easy conversational effort without
chasing the prescribed power.",
      "If you have pain, illness symptoms or substantial fatigue, take a full rest day and do not make up
the session."
    ],
    "rationale": "You have useful general aerobic work from yesterday's hike and two strength sessions this
week, but little recent cycling-specific practice. Forty minutes of low-resistance riding gives you
controlled pedaling and saddle exposure without another substantial muscular or impact load. This supports
the block's cycling-consistency focus and your longer-term ability to tolerate successive riding days at
Atlas and sustained road riding during your brevet series. Today's 3-8 °C rain makes the trainer a practical
setting for this controlled session.",
    "optional": false,
    "optionalRationale": "You build cycling-specific aerobic efficiency, comfortable pedaling and repeatable
saddle exposure toward the durability required for Atlas and Paris-Brest-Paris. At approximately 22 TSS,
this keeps your week near its modest 202 TSS total while providing its only recorded-or-planned cycling
session. Skipping it would leave a gap in the block's central cycling-consistency objective; shortening it
is preferable if your legs are tired, while pain or illness still warrants rest.",

mistralai/mistral-large-4-0

10.1/12.5

Mistral: Mistral Large 4

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	D	C	300.4 s	$0.1202	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00670	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate correctly keeps the planned 2026-10-30 gym session as a valid, indoor, moderate 45-minute workout with TSS 30 and FTP 220 W, and it follows the coach's Week 1 modifications (split squats limited to two bodyweight sets, knee-height pulls instead of floor deadlifts, the 110 bpm rest gate, and the lat pulldown 30/40/50 kg progression). The rationale ties the session to the lower-back, hip-hinge and saddle-pressure goals and to the fat-loss target. Weaknesses: the warm-up and total time budget are not itemised, there is no explicit stop condition for back or hip pain, and load progression beyond the lat pulldown weights is thin. Season revision: The candidate names Atlas throughout the season goal, the block structure and the new Atlas block, keeps block 1 starting on 2026-10-21, tiles the season contiguously to 2027-04-04, and leaves tomorrow and nextWeek null as required. Its weakest point is design: the Atlas race on 28 February falls inside the new block 4, which starts 22 February, so there is no real taper before the race, and the April brevet and Paris-Brest-Paris are only lightly reflected in the later blocks. The rationale for today and the week is athlete-grounded, but it refers to a tomorrow session that is null and merges the past Wednesday rowing and run into one record, which weakens coherence and grounding somewhat.

TODAY PLAN

    "bikeWorkout": null,
    "description": "Gym Strength B, 45 min indoors: 5 min easy spin/row warm-up, then elevated knee-height
rack or trap-bar pulls 3x8 (light, flat back, no floor deadlifts), bodyweight split squats 2x10/side (short
```

```
stride, controlled), glute bridges 3x12, lat pulldown 3x10 (30/40/50 kg progression), Pallof press
3x10/side, plank 3x30 s. Rest 90–120 s between sets and start each set only when HR is below 110 bpm; finish
with your 8-min hip/spine mobility circuit. This session builds the safe hip-hinge, glute, and anti-rotation
strength that protects your lower back and reduces sit-bone load on long rides while keeping Week 1 inside
its moderate, fat-loss-friendly load.",
    "optional": false,
    "optionalRationale": "This is not optional: it is one of Week 1's two strength stimuli and the main
posterior-chain/core work in the Autumn Re-Entry block. Skipping it would cost you the hip-hinge resilience
and glute/core stability that keep your back unloaded on climbs and prevent saddle blisters on brevet-length
rides, and it would leave the week below its planned moderate load without the muscle-preserving signal that
supports steady fat loss."
  }
}

{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 and then the 200 km brevet in April 2027
with durable aerobic endurance, efficient climbing and self-sufficient pacing, as stepping stones toward
Paris-Brest-Paris in August 2027.",
    "rationale": "The season runs from 2026-10-21 to 2027-04-04 and is shaped around the Atlas Mountain Race
on 28 February 2027 as the first major target, with the April 200 km brevet and Paris-Brest-Paris in August
2027 behind it. Because you can hold disciplined training for at most about four months, the plan peaks at
the end of February — four months from today — and then asks only for brevet-specific consistency rather
than a second fitness peak. The current aerobic-base block builds the durable engine, cadence above 85 rpm
and low-load strength the race demands; the winter block adds controlled threshold work plus skiing and easy
running; the January-to-February build progresses sustained power, long weekend rides and climbing and
fueling practice; and the final block covers race week and brevet preparation through 4 April 2027.
Progression stays conservative because the unplanned three-hour race in the week of 19 October showed that
fatigue has to be managed, not stacked.",

xiaomi/mimo-v2.6-pro-ultraspeed

10.1/12.5

Xiaomi: MiMo-V2.6-Pro-UltraSpeed

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A+	D	34.2 s	$0.1709	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00655	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.3/2 · Design 1.9/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON matches the requested today shape with the correct date, planned status, workout and moderate values, 45 minutes, indoor flag, 30 TSS and 220 W FTP, and the session is consistent with the Friday Gym Strength B plan. The exercise list follows the plan's constraints well: knee-height pulls replace floor deadlifts, split squats are capped at two sets, and goblet squats stay at 12 kg with a longer rest. The rationale ties the session to the posture, sit-bone and lower-back problems and to PBP, which is grounded. Weaknesses are that the bar load is an assumed range rather than a clear progression rule, there is no explicit RPE or rep-in-reserve target beyond the vague moderate and controlled effort wording, and the pulldown load is given as a range without a rule for choosing it. Season revision: The response returns the eight required keys with seven week sessions, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and keeps bodyMetrics empty. Atlas is named in the season goal, season and block rationales and the current week, and the season blocks tile contiguously from 2026-10-21 to 2027-04-04. Weaknesses: the season end stays at 2027-04-04, so Paris-Brest-Paris in August 2027 is never planned, and the Atlas taper runs through race day itself. The block name is unchanged rather than Atlas-specific, block 1 weeks are mostly unchanged apart from the week 2 load note, and the completed Wednesday rowing and run were merged into one 47-minute past session, which alters a record that should have stayed as supplied.

TODAY PLAN

    "title": "Gym Strength B: Safe Hip Hinge & Split Squats",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
```

```
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B in the gym, building the hip-hinge and single-leg stability that will let you hold a lower, more aerodynamic cycling posture without back pain. Warm up 5–8 minutes (stationary bike or easy treadmill walk plus cat-cow and hip circles). Then: (1) Elevated knee-height rack pulls or trap-bar block pulls — light load (bar or 20–30 kg total), 3x8, flat back, hips hinging not squatting; rest 90–120 s until heart rate is below 110 bpm before each set. (2) Bodyweight split squats — 2x8 per leg, controlled tempo, stop well short of failure to protect your quads after Tuesday's goblet squats. (3) Goblet squat — hold at 12 kg, 3x10, with a full 2-minute rest before the third set while quad burn lingers. (4) Lat pulldown 3x10 at 40–50 kg. (5) Pallof press 3x10 per side. (6) Plank 3x30 s. Finish with 5 minutes of easy stretching and your 8-minute hip/spine mobility circuit afterwards (keep it unrecorded). Keep the whole session moderate: the effort should feel controlled, never grinding.",
    "optional": false,
    "optionalRationale": "This session rebuilds the safe hip-hinge pattern and single-leg strength that directly fix your upright cycling position, sit-bone pressure, and long-climb back ache — the contact-point and posture resilience you need for the spring brevet series and Paris-Brest-Paris. Skipping it leaves the hinge untrained right when your back most needs progressive loading, and costs you the second strength stimulus of the week that anchors your core-strength goal and keeps your post-work hunger manageable."

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 with durable aerobic endurance, efficient cadence, sustained climbing power and practiced ultra-distance fueling, then carry that fitness into the April 200 km brevet series and on toward Paris-Brest-Paris in August 2027.",
    "rationale": "The season runs from 2026-10-21 to 2027-04-04 with the Atlas Mountain Race on 28 February 2027 as the main objective, the 200 km brevet in early April as the next milestone, and Paris-Brest-Paris in August 2027 as the longer arc. Because disciplined training has historically held for only about four months, the plan is built as short blocks with distinct, visible goals and keeps running, skiing and strength training in the mix to sustain motivation and durability through a Norwegian winter. Load rises conservatively: all aerobic work is capped below 140 bpm and cadence above 85 rpm is trained before any intensity, because recent sessions — a three-hour race at 187 bpm average heart rate and a strength session that grew into 25 minutes of pole vaulting — show how fast fatigue stacks when efforts drift. Winter blocks preserve cycling specificity while skiing and easy running carry aerobic durability, the February block converts fitness into long-distance and fueling capability, the final week trims volume 40-50% with one brief opener before the race, and the closing block rebuilds gently toward the early-April brevet.",

  },
  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block lays the aerobic and strength foundation that a long-distance race like the
Atlas Mountain Race on 28 February 2027 demands: hours of steady low-stress riding, smooth cadence above 85
rpm on flat terrain, and low-load full-body strength that supports repeated climbing without adding fatigue.
Weeks 1 and 2 rebuild consistency after an opening week that realized roughly 587 TSS — a three-hour race at
187 bpm average heart rate plus a strength session that grew into 25 minutes of pole vaulting — so all
aerobic work stays capped below 140 bpm and strength is either completed in full or deliberately reduced.
One controlled threshold stimulus enters in Week 3 only if Week 2 shows stable aerobic execution, Week 4
deloads, and Weeks 5-7 progress endurance toward 6.5-7.5 hours of cycling with one tempo block. The 225 W
FTP baseline is retained because no fresh threshold evidence supports a change, and missed minutes are never
recovered: holding adherence across the whole build matters more than any single session, since disciplined
training has historically held for about four months.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "This run builds the running-specific tendon, bone and connective-tissue durability
that lets you hold up through long days in the saddle and through the brevet series after the Atlas Mountain
Race. Skipping it would leave this week with no running stimulus at all and would thin the cross-training
base just as Week 3 introduces your first threshold work, so the 30 easy minutes are worth keeping even
though the fatigue cost is tiny.",

openai/gpt-6.1-sol-pro

10.1/12.5

OpenAI: GPT-6.1 Sol Pro

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	D	93.2 s	$0.2567	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00740	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, outdoor false and FTP 220 W, and the TSS matches the plan. The session is well built for a conservative hinge-and-core day, with sensible sets, rest periods, RIR-style effort guidance, fallbacks and stop conditions. Weaknesses: the stated duration of 53 minutes departs from the planned 45-minute gym session, the hinge uses dumbbells or kettlebells rather than the knee-height rack or trap-bar pulls the plan specified despite the athlete having a full gym, and no heart-rate guidance is given for this non-cycling session. Season revision: Strong points: Atlas is named in the season goal, the block rationale and several block names, block 1 starts on 2026-10-21 and is genuinely changed, the season tiles contiguously through 2027-08-31, the week has seven sessions that sum to about 190 TSS, the 225 W FTP is used correctly, the indoor ride respects the rain forecast, and tomorrow and the next week and block stay null. Weak points: the plan runs disciplined training from October to late May with only one reset week, which strains the athlete's stated four-month ceiling. Block 1 still starts its first week on 2026-10-19, and some block and week text reads as commentary on the revision rather than the plan as it stands. The coachQuestion and modelsRemarks keys are omitted, and the rationale and detail are good but not exceptional.

```
    "description": "Complete approximately 45 minutes in the gym, then 8 minutes of comfortable mobility. Warm up with 5 minutes of easy stationary cycling and 8 unloaded hip hinges. Keep every working set controlled, with at least 3–4 repetitions in reserve; your current hinge strength is unknown, so start with the lightest practical load.\n\n1. Elevated kettlebell or dumbbell deadlift from blocks near knee height: 2 × 8. Keep the weight close, brace gently and move through your hips without rounding your back. Rest 2 minutes. If you cannot find a comfortable, pain-free hinge, use floor glute bridges, 2 × 12, instead.\n2. Supported bodyweight split squat: 2 × 6 per leg, using a comfortable depth. Rest 90–120 seconds between sets; omit the second set if your quads remain notably sore or your control deteriorates.\n3. Chest-supported machine row: 2 × 10, resting 90 seconds.\n4. Machine chest press: 2 × 10, resting 90 seconds.\n5. Pallof press: 2 × 10 per side, pausing briefly with your arms extended. Rest 60 seconds.\n6. Bird dog: 2 × 5 per side with a 3-second hold, keeping your pelvis still.\n\nFinish with 8 minutes of gentle mobility: approximately 80 seconds each of low-lunge hip-flexor stretch, supported soft-knee forward fold, 90/90 hip rotations, supported shallow squat hold, supine figure-4 stretch and small-range cat-cow. Divide time between sides where applicable. Do not force spinal flexion or stretch into pain. Stop any exercise that produces back pain rather than ordinary muscular effort.",
    "rationale": "Your controlled Tuesday lifting and comfortable Wednesday run/row support a second conservative strength exposure after a recovery day. Low-volume hinge practice, supported leg work and trunk stabilization develop the strength you need to tolerate long climbs and sustained cycling positions without unnecessarily tiring your legs before the weekend hike. Progressive strength training also helps preserve muscle during gradual fat loss.",
    "optional": false,
    "optionalRationale": "You are building posterior-chain strength, single-leg control and trunk endurance for comfortable brevet and Paris-Brest-Paris riding. This second weekly gym exposure supports the foundation block within approximately five hours of structured training this week, before mobility. Skipping it would remove your only dedicated hinge-practice session and reduce the strength stimulus supporting muscle retention during fat loss; keep the loads conservative rather than chasing fatigue."
  }

openrouter/fusion

10.1/12.5

OpenRouter: Fusion

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	E	124.6 s	$0.4688	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00677	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.2/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.7/2

Combined judgment: Today plan: The JSON matches the requested today object with correct date, planned status, workout and moderate enums, 45 minutes, indoor flags and null bikeWorkout, and it aligns with the planned Gym Strength session and the no-bike-workout rule. The exercise prescription is specific and safe, with sets, reps, rest, RPE and stop conditions, and it respects the knee-height pull progression and split squat cap from the plan. Weaknesses are that the rationale mentions the Saturday hike and Tuesday quad burn in a way that is partly generic, the estimated FTP and TSS are reasonable but unverified, and the description's roughly 45-minute total timing with 7+12+5+6+6+9 minutes is slightly over the planned duration. Season revision: The response names Atlas throughout, keeps block 1 starting on 2026-10-21 with a genuinely revised block, and tiles the season without gaps through 2027-03-14 with tomorrow, nextWeek and nextBlock left null. Today's power intervals are arithmetically consistent with the 225 W FTP and sum to 60 minutes, and the indoor choice respects the rain forecast. Weaknesses: the season now ends on 14 March, so the April 200 km brevet series and Paris-Brest-Paris are dropped from the season rather than preserved, the Block 4 date span (8 Feb to 27 Feb) does not match its stated three weeks, and the plan assumes gravel or MTB riding and a trainer-heavy winter that the athlete never stated. The rewrite of today's previously planned run into a bike session is justified by the block revision, though the past-session TSS values were also quietly changed.

```

```
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session, about 45 minutes. Rest 90–120 s between sets and let your heart rate drop
below 110 bpm before each set of pulls and split squats. Stop every set with 2–3 good reps still in the tank
(RPE 6). Your back must stay flat and pain-free throughout. If a rep makes your lower back ache, end that
exercise.\n\n1) Warm-up (7 min): 5 min on the SkiErg or an incline treadmill walk at 100–115 bpm. Then 1 min
cat-cow and 1 min 90/90 hip rotations.\n\n2) Elevated trap-bar pull, or rack pull from pins at knee height
(about 12 min): first 2 ramp sets of 5 reps with an empty or light bar. Then 3 x 8 reps at a load that feels
clearly easy. You have no recorded hinge loads yet, so I'm assuming a cautious start: about 40–50 kg total
on a trap bar, or about 40 kg on a barbell rack pull. Push your hips back with your shins nearly vertical,
brace before each rep, and stand tall by squeezing your glutes, without leaning back. Use a 2-second
lowering phase.\n\n3) Bodyweight split squat (5 min): 2 x 8 per leg, holding a support if you need it. Use
slow, controlled reps and stop the set if your quads start to burn the way they did on Tuesday.\n\n4) Seated
cable row (6 min): 3 x 10 at about 35–40 kg, a step below your 50 kg lat pulldown. Keep your chest tall and
your spine neutral, and pull with your shoulder blades.\n\n5) Dumbbell bench press (6 min): 3 x 10 at a
moderate weight you could lift for about 13 reps. I'm assuming roughly 14–16 kg dumbbells. Adjust so the
last reps stay smooth.\n\n6) Core and back durability (about 9 min):\n- Bird dog: 2 x 6 per side with a 3-
second hold.\n- 45° back extension, bodyweight only: 2 x 10. Hinge at the hips and stop when your body is in
a straight line, without overextending.\n- Side plank: 2 x 25 s per side.\n\nAfterwards: your 8-minute hip
and spine mobility circuit (couch stretch, forward fold, 90/90, deep squat hold, figure-4, cat-cow). Stop
recording your watch before you start it.\n\nNutrition: eat a protein-rich snack before you leave work (for
example Greek yogurt or skyr) so you arrive at dinner less hungry.",
    "rationale": "Today you start rebuilding the hip hinge safely. You've told me heavy squats and good
mornings tend to injure your back, and that crouching work tires it. Pulling from knee height lets your
glutes and spinal erectors learn to hold a braced, neutral spine under load without the end range of motion
where your back is vulnerable. Thursday's rest means your quads have had time to recover from Tuesday's
goblet squats. That is why the split squats stay at two bodyweight sets and the pulling and pressing get the
volume. Saturday's 2-hour hike also stays fresh because nothing today is high-volume leg work. Short rests
and RPE 6 keep the session at moderate stress. That supports your fat-loss goal without triggering big
hunger after work.",
    "optional": false,
    "optionalRationale": "This is the second strength day of the week and the only session that trains your
hip hinge. That hinge is the base for the pain-free back on long climbs, the lower and more aerodynamic
position that takes pressure off your sit bones, and carpentry work without back fatigue. It also builds
toward the trunk durability you need to sit on the bike through Paris-Brest-Paris. If you skip it, the hinge
progression planned for weeks 2–4 starts from zero, and the muscle you're keeping while you cut body fat
gets only one strength stimulus this week instead of two."
  }
}
```

SEASON REVISION

9.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
97.5 s	**$0.3072**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.2/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.7/2

The rewrite of today's previously planned run into a bike session is justified by the block revision, though the past-session TSS values were also quietly changed.

RETURNED JSON

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race (start 28 February 2027) well-paced, fuelled and durable over
multiple days of off-road climbing and hike-a-bike. This also builds the endurance foundation for the April
200 km brevet, the rest of the randonneur series and Paris-Brest-Paris in August 2027, which a later season
will plan.",
    "rationale": "Your next big event is the Atlas Mountain Race, so the whole season builds toward it. It
is a multi-day unsupported off-road race. Success depends on aerobic durability, climbing torque at low
power, hike-a-bike tolerance, steady fuelling and pacing well below threshold. A high FTP matters much less.
Your FTP is 225 W. Your recent weekly volume is modest, roughly 4-5 hours outside race weeks. That leaves
```

```
about 17 weeks to grow volume in a steady progression with a deload every third or fourth week. Intensity
stays mostly at endurance, tempo and sweet spot, with only small doses of threshold work. You have said
disciplined training usually holds for 4 months at most. So this season runs about 4.5 months from 21
October to 14 March and ends with the race and a recovery fortnight. Skiing, hiking and running add variety
and aerobic volume to keep motivation up through a Trondheim winter. Weekdays stay within your 2-hour after-
work window, and the long rides fall at weekends. The working assumption is that most winter riding happens
on the trainer, with outdoor gravel or MTB weekend rides and long hikes when conditions allow. After the
race comes a planned unstructured break. Then a new season covers the brevet series and Paris-Brest-Paris,
so you are not asked to hold structure for 10 months in a row.",

    "focus": "Rebuild consistent aerobic riding volume with cadence above 85 rpm, introduce controlled
sweet-spot work, and establish low-load full-body strength and walking durability without stacking
fatigue.",
    "rationale": "For a multi-day mountain race, the biggest gain right now is regular time on the bike.
Week 2 had none of the planned trainer rides; the hikes, run and rowing filled the aerobic slot instead.
That load stayed under the 140 bpm ceiling, so you are fresh enough to progress. Weeks 3 to 5 raise cycling
volume step by step, from about 4.5 to about 7 hours. Week 3 adds one controlled sweet-spot session to build
the sustained low-intensity power you will use on long Atlas climbs. Weeks 4 and 5 add back-to-back weekend
days to start training durability on tired legs. Week 6 is a deload before the Volume and Durability Build.
Two short strength sessions a week build the hip, trunk and upper-body strength needed for hours on rough
terrain and for pushing the bike. Hikes stay in the plan because hike-a-bike sections need walking
tolerance. Rain is forecast nearly every day, so we assume most weekday riding is on the trainer. FTP stays
at 225 W until consistent riding supports a small gain.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "This week has kept your aerobic ceiling on every session: two strength sessions, a
Wednesday double of rowing and an easy run, and a 2-hour hike at 114 bpm average. What it lacked was
cycling, because the Thursday and Saturday trainer rides did not happen. For a multi-day mountain race,
regular riding is the base everything else builds on. So the week closes with an easy 60-minute trainer ride
focused on cadence, not a run. It is not a make-up for missed minutes. It is a short, low-stress ride that
restarts the habit of cadence above 85 rpm from the first minute, so you begin Week 3's volume rebuild and
first sweet-spot session with fresh legs. Pedalling efficiency at low power is what saves energy over a long
race.",

Pareto Code Router

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	E	170.9 s	$1.0664	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00700	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.4/2 · Detail 1.7/2

Combined judgment: Today plan: The JSON is clean, matches the planned 45-minute moderate gym session dated 2026-10-30, and correctly marks outdoor false and canBeOutdoor false for a gym session with bikeWorkout null. The exercise selection follows the block's hinge progression (elevated pull, split squats capped at two sets, light pressing and rowing, core work) with explicit sets, reps, rest, and a stop rule for lower-back pinch, though the warm-up, five main movements at three sets with 90 to 120 second rests, and the eight-minute mobility cool-down likely exceed the stated 45 minutes. The rationale is specific to the hinge, back pain, sit-bone pressure and the April brevet, and the detail includes load assumptions and fallbacks, but the time overrun and the omission of an explicit RPE or rep-in-reserve target for the pulls are weaknesses. Season revision: The candidate names Atlas throughout, rewrites block 1 with a new focus and rationale while keeping its 2026-10-21 start, tiles the later blocks without gaps, and leaves tomorrow, nextWeek, nextBlock and bodyMetrics correctly null or empty. The power-target cadence session is concrete and its interval durations sum to 60 minutes. The main failure is that the season ends on 2027-03-14 and drops the April 200 km brevet and Paris-Brest-Paris in August 2027 entirely, which the survey adjustments and the athlete's goal require to be preserved. The today rationale also claims two full weeks without structured pedalling since 24 October, which contradicts the 24 October indoor ride in the activity history. The coachQuestion about bike kit and ski access is unnecessary given the plan is otherwise complete.

    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Second gym session of Week 1, after work. Keep it conservative: all working sets stop 2-3 reps short of failure, and rest 90–120 s between sets so your heart rate drops below 110 bpm before you start the next one. Warm-up (8 min): 4 min easy spin or SkiErg at 110–125 bpm, then cat-cow x8 slow, bird dog 2x6/side, bodyweight glute bridge 2x10, and 10 hip-hinge reps with a dowel along your spine (head, upper back, sacrum in contact) to groove a flat back. Main lifts: (1) Knee-height rack pull or trap-bar pull from blocks/high handles, 1 practice set with empty bar (20 kg), then 3x8 at a light load of 30–40 kg – if you have no idea what feels right, start at 30 kg; the goal is a perfect flat-back hinge with hips pushing back and the bar close to the thighs, not load. (2) Bodyweight split squats 2x8/side, rear foot flat on the floor, front shin vertical, slow 3-second lowering; hold a rail if balance is shaky. (3) Dumbbell bench press 3x10 with a weight you could lift ~13 times (suggest 14–18 kg per hand on day one). (4) Seated cable row 3x10 at ~40–45 kg (slightly lighter than your 50 kg lat pulldown), squeezing shoulder blades, ribs down. (5) Core superset x3: dead bug 8/side (lower back pressed into the floor) and side plank 25 s/side. Cool-down: your daily 8-minute hip/spine mobility circuit (couch stretch, standing forward fold with soft knees, 90/90 hip rotations, deep squat hold, supine figure-4, cat-cow, 90 s each). Stop the pull immediately if you feel any lower-back pinch and finish with glute bridges instead. Afterwards have a protein-rich snack or go straight into a vegetable- and protein-heavy dinner to blunt post-work hunger.",
    "optional": false,
    "optionalRationale": "This session is where you rebuild the hip hinge safely: the elevated pulls teach your posterior chain and core to hold a flat back under light load, which is the exact quality that stops your back aching on long climbs, lets you ride a lower, more balanced position with less weight on your sit bones, and protects you during crouching carpentry work. The split squats and pressing/rowing also add the lean muscle that supports your fat-loss goal by raising resting energy expenditure. Skipping it leaves you with only one gym session in Week 1, stalls the hinge progression that Weeks 2–4 build on (lower pull height, more load), and pushes back the day you can load squats and deadlifts without injury risk – the key gap between you and a pain-free 200 km brevet in April."
  }
}

The today rationale also claims two full weeks without structured pedalling since 24 October, which contradicts the 24 October indoor ride in the activity history. The coachQuestion about bike kit and ski access is unnecessary given the plan is otherwise complete.

RETURNED JSON

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 within the time limit on durable aerobic endurance, steady climbing power, hike-a-bike durability, reliable 60-90 g/h fuelling and a proven bikepacking setup, so that the fitness then carries into the April 200 km brevet and the 2027 Paris-Brest-Paris campaign.",
    "rationale": "The Atlas Mountain Race is the A event and sits roughly four months from the start of this season, which matches the longest stretch of disciplined training you have sustained before, so the season is deliberately compact: one race anchors every block, every fourth week is a deload, and hiking, skiing and strength keep the training varied enough to stay on it through a Trondheim winter. The race is ultra-distance and self-supported over rough, mountainous terrain, so the limiting qualities are aerobic durability over many hours, repeatable low-intensity climbing, walking strength with a loaded bike, fuelling discipline and equipment confidence rather than a high FTP. Your recent training shows good control at easy intensity (indoor rides under 140 bpm, long hikes at 114-128 bpm) but also that unplanned hard efforts such as a three-hour race at 187 bpm cost you a full week, so the progression grows weekend duration steadily, holds midweek intensity to one controlled sustained-power session per week, and never stacks hard days. With daylight shrinking to under eight hours, long rides live on the trainer and on weekends, hikes double as hike-a-bike preparation, and skiing adds aerobic hours without extra cycling fatigue. The season ends with
```

```
two recovery weeks after the race so the brevet series and PBP can be planned as a fresh, separate season rather than extending this one past your proven adherence window.",

  },
  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, low-load strength and hike-a-bike walking fitness for the Atlas Mountain Race without stacking fatigue",
    "rationale": "The Atlas Mountain Race rewards the ability to ride and walk at low intensity for many hours on consecutive days, so this block lays the aerobic and structural groundwork: every endurance ride is capped under 140 bpm, cadence is above 85 rpm from the first minute so pedalling stays efficient when you are tired, strength is light and full-body to protect back, shoulders and knees over rough ground, and the long weekend hikes you already enjoy are kept because they build exactly the walking durability hike-a-bike demands. Your first two weeks show the pattern to protect against: an unplanned three-hour race at 187 bpm average and extra leg work pushed Week 1 to roughly 587 TSS, and the week that followed delivered strength, rowing, running and hiking but almost no pedalling until today. From Week 3 the priority is cycling specificity: four to five hours on the bike with one controlled sustained-power session, one long easy indoor or outdoor ride, one strength session and one short run or hike, then a deload in Week 4, before weekend duration climbs to three hours and a first back-to-back weekend in Weeks 5 and 6. The 225 W FTP baseline is retained because no sustained power evidence justifies a change; small gains are expected only once consistent load is completed in Weeks 5-7.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "This week sits between a heavy, unplanned race week and the first cycling-specific week of
the Atlas Mountain Race build, so its job is to keep every aerobic effort under 140 bpm, complete two light
strength sessions, and finish fresh. Tuesday and Friday strength, a Wednesday double of 15 minutes of rowing
plus a 32-minute easy run, and Saturday's 2 h 05 min hike at 114 bpm all respected the ceiling, while
Thursday's trainer ride was missed and is not recovered. Because no cycling has been pedalled all week and
the block's core skill is cadence above 85 rpm from the first minute, Sunday is an easy 60-minute trainer
ride with cadence blocks rather than a run: it costs little fatigue the day after a very easy hike, keeps a
cycling touch point in a week that otherwise has none, and sets up Week 3's first controlled sustained-power
session. Total load lands near 220 TSS, within the low-fatigue target.",

      "If your legs feel heavy from Saturday's hike, ride 45 minutes with 2 x 10-minute cadence blocks and
keep heart rate under 130 bpm.",
      "If you cannot get to the trainer, run 30 minutes easy on the treadmill at 115-135 bpm as a minimal
aerobic touch point."
    ],
    "rationale": "The Atlas Mountain Race is won or lost on hours of efficient, low-intensity pedalling, and
this is the only ride in a week that otherwise contained strength, rowing, running and hiking. At 65% of FTP
and under 140 bpm it adds almost no fatigue the day after a very easy 2 h 05 min hike, yet it re-establishes
the block's core habit: cadence above 85 rpm from the first minute, which your 23 October ride (78 rpm,
drifting down) showed is not yet automatic. Finishing the week with a controlled hour on the bike means you
start Week 3's first sustained-power session with a fresh body and a cadence groove already in place. It
stays indoors because the forecast is rain all day at 3-8 °C.",
    "optional": false,
    "optionalRationale": "This builds the pedalling economy at high cadence and low power that lets you ride
hour after hour in the Atlas without your legs loading up, and it is the week's only cycling-specific
stimulus. Skip it and you enter Week 3 having gone two full weeks without structured pedalling since 24
October, so the first sustained-power session would be done on stale, low-cadence legs and the block's
cadence target slips another week.",

deepseek/deepseek-v4-flash-0731

10.0/12.5

DeepSeek: DeepSeek V4 Flash 0731

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	C	A+	252.1 s	$0.00651	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00700	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate returns a clean today object for 2026-10-30 that matches the planned 45-minute moderate gym session, with indoor flags, FTP 220 W and TSS 30 all consistent with the plan. The exercise selection follows the current week's constraints: elevated rack or trap-bar pulls instead of floor deadlifts, two bodyweight split-squat sets, lat pulldowns building on the logged 30 to 50 kg progression, Pallof presses and planks, with the 90 to 120 second rest the coach asked for. The rationale is specific to the hinge, back protection and the fat-loss calorie deficit, and it states what is lost by skipping. Weaker points are the absence of load guidance for the rack pulls and the lack of a pain stop rule or RPE cue, which would have sharpened execution. Season revision: Atlas Mountain Race is named in the season goal and in the new Atlas Mountain Race Build block, block 1 starts on 2026-10-21 and its weeks are changed, the blocks tile contiguously to 2027-04-04, and the nextWeek, nextBlock and tomorrow fields stay null. The main design weakness is that the season has no taper before the 28 February Atlas race, which is treated as the end of a build rather than a peak, and the current week contains no cycling at all despite the athlete wanting power-targeted cycling. Past-session TSS values were also quietly revised and the output adds coachQuestion and modelsRemarks beyond the eight keys the revision request listed.

TODAY PLAN

    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Complete a 45-minute Gym Strength B session. Warm up with 5–6 minutes of easy cardio and
dynamic hip mobility. Main work: (1) Elevated knee-height rack pulls (or trap-bar pulls) – 3 x 8–10 with a
light, controlled load, resetting a flat-back hip hinge on every rep to protect your lower back; (2)
Bodyweight split squats – 2 x 8–10 per leg with a slow tempo to keep quad fatigue manageable; (3) Loaded
glute bridges – 3 x 12; (4) Lat pulldown – 3 x 10, continuing your progress from 30–50 kg while keeping the
last rep crisp; (5) Pallof press – 3 x 10 per side; (6) Front plank – 3 x 30–45 seconds. Rest 90–120 seconds
between sets so your heart rate drops below 110 bpm before each set. Finish with 5 minutes of hip/spine
mobility.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength, hip-hinge control, and core
anti-rotation stability that carry you toward a pain-free, more aerodynamic cycling posture, protect your
lower back on long climbs, and preserve muscle while you create the calorie deficit for fat loss. Skipping
it removes the week's only progressive strength stimulus, leaving your back and glutes less durable for
Saturday's hike and the long rides ahead."

z-ai/glm-5.3-flash

Z.ai: GLM 5.3 Flash

10.0/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	75.3 s	$0.00787	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00657	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate returns a clean today object dated 2026-10-30 as a planned moderate 45-minute gym workout with TSS 30, matching the plan, and it correctly sets outdoor false and bikeWorkout null. The exercise list follows the week's prescribed structure (knee-height pulls, two split-squat sets, glute bridges, row or pulldown, Pallof, plank) with sets, reps, rest and a heart-rate rest gate. The rationale is tied to the plan and the skipped-deadlift history, but the claim that floor deadlifts aggravated your back is not stated in the input, and the 40 kg starting load for pulls is an unflagged assumption. Season revision: The season tiles contiguously from 2026-10-21 to 2027-08-22, names Atlas in the goal, the block list and the new Atlas build and taper blocks, and keeps block 1 starting on 2026-10-21 with tomorrow, nextWeek and nextBlock correctly null. However, block 1 itself changes only in its rationale, and the week and today sessions are carried over almost unchanged apart from a trimmed optionalRationale, so the current block and week are barely re-planned for the Atlas goal. The Wednesday rowing TSS was also silently cut from 70 to 15 without explanation, and the season rationale opens with meta wording about the plan now spanning the period. The Paris-Brest-Paris date is flagged as an assumption, which is honest, but the endDate of 2027-08-22 rests on it. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Second gym session of the week at your full gym. Warm up 5 minutes on the bike or rower, then: (1) Knee-height rack or trap-bar pulls, 3 x 8 at a light load — start around 40 kg and only add weight once the flat-back hinge pattern is perfect; push your hips back and stand tall, resting 90–120 s until your heart rate is below 110 bpm before each set. (2) Bodyweight split squats, 2 controlled sets x 8–10 per leg, no added weight while Tuesday's quad burn fades. (3) Loaded glute bridge, 3 x 12 (add a light weight if bodyweight still feels easy). (4) Chest-supported row or lat pulldown, 3 x 10 at a moderate load. (5) Pallof press, 3 x 10 per side. (6) Plank, 3 x 30 s. Finish with your 8-minute hip and spine mobility circuit (couch stretch, forward fold, 90/90 hips, deep squat hold, figure-4, cat-cow).",
    "rationale": "This is the second conservative gym session of Week 1 and completes the two-day strength split. The knee-height elevated pulls rebuild your hip-hinge pattern from a safe position after floor deadlifts aggravated your back, the two bodyweight split-squat sets respect the quad burn you reported on Tuesday, and the Pallof press and plank work target the core strength and stability your second goal calls for. Holding 90–120 s rests with heart rate below 110 bpm keeps the session at moderate stress so it supports fat loss without spiking evening hunger, and it fits the week's 5.0–5.5 hour target load.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain hinge strength and core stability that protect your lower back on long climbs and let you hold a lower, more sustainable cycling posture toward the spring brevets and Paris-Brest-Paris — it is the second of your two weekly strength stimuli inside the 5.0–5.5 h Week 1 load. Skipping it halves this week's strength stimulus, stalls the safe hinge progression you need before Week 2 adds load, and costs you a day of the lean-mass-preserving work that underpins your fat-loss goal."
  }
}
```

SEASON REVISION

9.1/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027, then comfortably complete a randonneur brevet series starting with a 200 km brevet in April 2027, and ride Paris-Brest-Paris in August 2027.",
    "rationale": "The season now spans from the current base block through Paris-Brest-Paris in August 2027, with the Atlas Mountain Race on 28 February 2027 as the first A-event. The blocks that build toward it keep the conservative aerobic-first progression you have responded well to, then shift into ultra-specific endurance: long rides, back-to-back weekend days, climbing durability, and fueling practice, because a self-supported mountain ultra rewards sustained low-intensity output and pacing discipline far more than raw threshold power. After the race, a dedicated recovery and rebuild block protects you before the April 200 km brevet, and the spring brevet series (200, 300, 400, 600 km) doubles as both your stated goal and the natural qualification path for Paris-Brest-Paris. Because you have told me disciplined training has historically lasted at most about four months for you, the plan deliberately rotates emphasis every few weeks — cycling, strength, skiing and running — and places recovery weeks and a full post-race rebuild at fixed points, so no single monotone phase runs long enough to burn you out. I assume Paris-Brest-Paris falls in mid-August 2027; if the exact date differs, the final taper block shifts accordingly.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This seven-week block is the foundation for everything that follows: the Atlas Mountain
Race on 28 February 2027 is an ultra-distance mountain event, and its single biggest determinant is a large,
durable aerobic base built at low intensity. The block therefore prioritizes strict aerobic control (heart
rate under 140 bpm, cadence above 85 rpm from the first minute of every ride), low-load full-body strength,
and gradual volume progression toward six to seven hours per week. The conservative shape also respects two
things you have told me: your recent three-hour race at 187 bpm average heart rate added real fatigue that
had to be absorbed first, and your history of sustaining disciplined training for at most about four months
means this phase must stay varied and sustainable rather than aggressive. One controlled threshold stimulus
```

```
enters in Week 3 only if Week 2 demonstrated stable aerobic execution, followed by the planned Week 4
deload. The 225 W FTP baseline is retained because no fresh threshold test or sustained power evidence
justifies a change.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "This run builds the running-specific aerobic durability and soft-tissue resilience
that keep your cross-training base broad through the winter, directly supporting the aerobic engine the
Atlas Mountain Race demands and closing Week 2 at its target load of roughly 180-220 TSS. Skipping it costs
you the week's only running stimulus and leaves Week 3's threshold introduction resting on cycling alone,
narrowing the cross-training variety that keeps your training sustainable.",

openai/gpt-6.1-terra

10.0/12.5

OpenAI: GPT-6.1 Terra

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A	A	54.7 s	$0.0250	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00727	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.7/2 · Design 2.2/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.6/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the date, planned status, indoor workout type, 45-minute duration, moderate intensity, and 220 W FTP from the plan. The session is well chosen: knee-height rack pulls, supported split squats, rows, floor presses and Pallof presses, with specific sets, reps, rest, a reps-in-reserve load rule and a stop condition for back pain. The main weakness is the rationale, which is a brief, mostly generic statement that does not tie the session to the fat-loss goal, the block's target load or the athlete's hunger problem. The extra rationale field inside today is a minor contract deviation, and the description gives no concrete load progression or fallback for missing equipment. Season revision: Atlas is named throughout the season, the block and today, block 1 starts on 2026-10-21 and is genuinely revised, the season tiles contiguously through the Atlas taper, event and recovery and on to PBP, and tomorrow, nextWeek and nextBlock stay null. Today's intervals are internally consistent with the 225 W FTP (53, 60 and 51 percent of 225 W sums to 50 minutes). Weaknesses: the Atlas build is compressed into a few weeks with little Atlas-specific detail beyond block 1, the 2026-11-01 Atlas-relevant rationale is generic, the manual 2026-10-21 activity is ignored, and the block 1 week 1 targetLoad wording about the race on 20 October is confusing.

TODAY PLAN

moonshotai/kimi-k2-thinking

10.0/12.5

MoonshotAI: Kimi K2 Thinking

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	D	B	430.6 s	$0.0601	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00668	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.1/3 · Rationale 1.6/2 · Grounding 1.4/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is valid, the today object has the right date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, FTP 220 and null bikeWorkout, and the session follows the plan's Friday gym structure with goblet squats, trap-bar pulls and two split-squat sets. The exercise prescriptions are specific, with sets, reps, rest, form cues and a stop rule, and the load assumption for the pulls is stated. Weaknesses: the warm-up suggests a rower, which the athlete's gym does not have, and the seven-exercise list with a 45-minute cap is crowded, so the description is long and partly padded. The optionalRationale states a concrete cost of skipping, though it is somewhat generic about injury risk. Season revision: The candidate names Atlas throughout the season, block, week and today, keeps block 1 starting on 2026-10-21, and tiles the later blocks without gaps through the season end, with the required eight keys present. Its weaknesses are that it mislabels Atlas as a February mountain bike race, which is not in the input, that it rewrites the Wednesday past session into a merged double-day with an inflated 100 TSS, and that block 1 changes little beyond the focus and rationale wording. Cycling blocks lack concrete power or heart-rate targets for the future weeks, and the 4-month disciplined-training limit is claimed but only loosely reflected in the 16-week build blocks.

```
    "bikeWorkout": null,
    "description": "Today’s gym session is deliberately placed after Thursday’s recovery to let your quads
and lower back absorb Tuesday’s squat volume and Wednesday’s run/row impact before reloading the hinge
pattern. This moderate 45-minute Strength B session builds the safe hip-hinge mechanics and single-leg
stability that reduce back ache on climbs and shift weight off your sit bones during long rides, directly
supporting your primary fat-loss goal by preserving lean muscle while keeping effort controlled enough to
avoid evening hunger spikes. Warm-up: 5 minutes easy spin on a gym bike or rower at <100 W / <110 bpm, plus
dynamic hip circles and leg swings. Main work: (1) Goblet Squat 3 x 10 reps @ 12 kg — hold the dumbbell at
your chest, keep elbows in, squat to a comfortable depth with a tall spine; if sharp quad burn returns
before the final set, stop at 2 sets. (2) Elevated Rack Pull or Trap-Bar Pull (bar or handles at mid-shin to
knee height) 3 x 8 reps @ a conservative 20–30 kg total — assume a light load since you have not yet
reloaded the hinge pattern; brace your core, maintain a perfectly flat back, drive through the hips, and
stop the moment form breaks. (3) Bodyweight Split Squat 2 x 8–10 reps per side — rear foot on a low bench or
floor, torso upright, controlled 2-second lowering; this builds hip-flexor length and single-leg stability
for riding and running. (4) Single-Arm Dumbbell Row 3 x 10 reps per side @ 14–18 kg — support on a flat
bench, keep back flat, pull elbow to hip. (5) Seated or Standing Dumbbell Overhead Press 3 x 10 reps @ 10–12
kg — brace your core to prevent lower-back arch. (6) Side Plank 3 x 30 seconds per side. (7) Dead Bug 3 x 8
reps per side, 3-second exhale on each extension. Rest 90–120 seconds between all heavy sets, allowing heart
rate to drop below 110 bpm before the next set. Finish with your standard 8-minute hip and spine mobility
circuit (couch stretch, forward fold, 90/90 rotations, deep squat hold, figure-4 stretch, cat-cow).",
    "optional": false,
    "optionalRationale": "Skipping this session costs you the protected hip-hinge patterning and single-leg
stability that directly reduces lower-back strain on long climbs and sit-bone pressure during ultra-distance
rides. Without it, you delay the postural adaptations needed for Paris-Brest-Paris and increase injury risk
when heavier winter loads arrive."
  }
}
```

SEASON REVISION

9.4/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

    "title": "Short Easy Aerobic Run",
    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 steps per minute. Keep the effort conversational from the
first minute and let pace fall away rather than pushing heart rate up on any incline. Indoors because rain
and 7 m/s gusts are forecast through the day.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This easy run closes a week that respected the aerobic ceiling on every session, keeping
you fresh for Week 3's first threshold introduction as we build toward the Atlas Mountain Race on February
28. Thirty minutes at conversational pace maintains the running-specific durability that will support your
cycling base through the Norwegian winter and costs minimal fatigue before the harder work ahead. The 115-
135 bpm ceiling ensures we stay strictly aerobic, preserving the low-fatigue rebuild this week was designed
to deliver.",
    "optional": false,
    "optionalRationale": "Skipping this session costs you the running-specific aerobic durability that
supports your cycling base through winter; without it, you lose a low-fatigue stimulus that maintains tissue
resilience and neuromuscular coordination for the Atlas Mountain Race build.",

anthropic/claude-sonnet-4.6

10.0/12.5

Anthropic: Claude Sonnet 4.6

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	D	92.0 s	$0.1715	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00683	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, workout type, moderate intensity, 45-minute duration, indoor flags, null bikeWorkout, 220 W FTP and 30 TSS all match the plan. The exercise selection is sound: elevated rack pulls, two split-squat sets, bridges, rows, Pallof and dead bugs, with good load guidance, stop conditions and rest. However, the current week plan calls for holding goblet squats at three steady sets, and the candidate drops them entirely without explanation. The listed volume with 90 to 120 second rests and the 8-minute cool-down also looks like it would exceed the stated 45 minutes. Season revision: The season is cleanly re-planned around Atlas on 28 February 2027 with contiguous blocks through the August 2027 season end, block 1 still starts on 2026-10-21, and the 4-month training ceiling is acknowledged in the season rationale. The current block is only lightly changed: its name, focus and weeks 1, 2, 4 to 7 are essentially unchanged, and the Atlas link lives mostly in the season blocks rather than in the current aerobic-base block itself. Weaknesses include an invented season end date of 2027-08-22 tied to PBP, some meta-style phrasing such as the season now has, and a week 2 target load of cycling hours in a week that contained almost no cycling. Today's session and the week structure are concrete, HR-capped and coherent with the recorded activities, and tomorrow and next-week fields are correctly kept null.

```
    "description": "Gym Strength B focuses on your posterior chain and single-leg stability while keeping your lower back fully protected. Take 90–120 seconds of rest between every set and let your heart rate drop below 110 bpm before starting the next one.\n\nWarm-up (5 min): 5 minutes of easy cardio (treadmill walk or rowing at low effort) to raise your core temperature, then 10 slow cat-cow movements and 10 bodyweight hip hinges touching a wall behind you to groove the hinge pattern.\n\n1. Elevated Rack Pull (knee-height bar or trap-bar if available): 3 × 8 reps. Set the bar at knee height in the rack. Stand with feet hip-width, hinge at the hips with a flat back, grip the bar, and drive through your heels to stand tall. Lower under control. Start with the empty bar (20 kg) or a light trap-bar load (30 kg) — whichever feels completely pain-free in your lower back. If you feel any back strain, reduce the load or raise the bar height. Rest 2 minutes between sets.\n\n2. Bodyweight Bulgarian Split Squat (rear foot elevated on bench): 2 × 8 reps per leg. Place your rear foot on a bench, front foot far enough forward that your shin stays vertical at the bottom. Lower slowly (3 seconds down), pause briefly, and drive back up. Keep your torso upright. Stop at 2 sets — your quads are still adapting. Rest 90 seconds between sets.\n\n3. Glute Bridge (bodyweight or with a 20 kg plate on hips): 3 × 12 reps. Lie on your back, feet flat, drive hips to the ceiling, squeeze glutes at the top for 2 seconds, lower slowly. This felt easy last week — add the plate if available. Rest 60 seconds.\n\n4. Seated Cable Row or Chest-Supported Dumbbell Row: 3 × 10 reps. Use a moderate load that lets you keep a flat back throughout. Pull elbows back and squeeze shoulder blades together at the end of each rep. Suggested starting load: 40–50 kg on cable row. Rest 90 seconds.\n\n5. Pallof Press (cable or band): 3 × 10 reps per side. Stand side-on to the anchor, press the handle straight out from your chest, hold 2 seconds, return. Keep your hips square and resist any rotation. Rest 60 seconds between sides.\n\n6. Dead Bug: 3 × 6 reps per side. Lie on your back, arms pointing to the ceiling, knees at 90°. Slowly lower the opposite arm and leg toward the floor while pressing your lower back into the mat. Return and alternate. Move slowly and breathe out on the way down. Rest 60 seconds.\n\nCool-down (5 min): 8-minute daily hip and spine mobility circuit — (1) couch stretch or low lunge with hips pushed forward, 90 s; (2) standing forward fold with soft knees, 90 s; (3) 90/90 hip rotations on the floor, 90 s; (4) deep squat hold with heels down, 90 s; (5) supine figure-4 glute stretch, 90 s; (6) cat-cow with slow spinal movement, 90 s.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain and single-leg strength that directly addresses your two most limiting physical constraints: the lower-back pain on long climbs and the saddle-pressure blisters caused by your upright cycling posture. The elevated rack pull safely reintroduces hip-hinge loading under full spinal control — the exact movement pattern your back needs to tolerate a more aggressive, weight-forward position on the bike. The Bulgarian split squat develops the single-leg hip-extension strength and hip-flexor length that will allow your pelvis to rotate forward and reduce sit-bone pressure on ultra-long rides like PBP. Skipping this session delays the posterior-chain and mobility adaptations that are the structural foundation of every other goal in your season: without them, your back will continue to ache on climbs, your saddle sores will persist on long brevets, and your running economy will remain limited by tight hip flexors. This is the only dedicated hip-hinge session in the week, so there is no other opportunity to accumulate this stimulus before Week 2 begins."
  }
}
```

Today's session and the week structure are concrete, HR-capped and coherent with the recorded activities, and tomorrow and next-week fields are correctly kept null.

RETURNED JSON

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, then finish a 200 km brevet in April 2027 as the first step toward Paris-Brest-Paris in August 2027, building durable aerobic endurance, efficient cadence, sustained power, and the ability to handle multi-day mountain terrain.",
    "rationale": "The season now has two sequential A-events: the Atlas Mountain Race (AMR) on 28 February 2027 and Paris-Brest-Paris (PBP) in August 2027, with a 200 km brevet in April as a qualifying and fitness checkpoint between them. Because the athlete has noted a maximum of four months of disciplined training before motivation or consistency fades, the plan is structured so that each block delivers a self-contained fitness gain rather than relying on unbroken six-month momentum. The current aerobic base block runs through
```

```
early December, building the durable low-intensity engine and cadence efficiency that underpin everything
else. A winter build block then introduces controlled threshold work and uses skiing and running as cross-
training to maintain aerobic capacity without over-relying on the bike. A focused AMR-specific block follows
in January and February, emphasising sustained climbing power, back-to-back load tolerance, and self-
sufficiency skills needed for a multi-day mountain race. After the AMR, a short recovery and brevet-prep
block converts that fitness into 200 km pacing and fueling discipline for the April brevet. The remainder of
spring and summer then builds toward PBP with progressive long-distance endurance. The season ends on 2027-
08-22, the approximate end date of PBP 2027.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block lays the aerobic and structural foundation for everything that follows,
including the Atlas Mountain Race in February. Week 1 was completed with a much higher realized load than
planned — roughly 587 TSS driven by a three-hour race at 187 bpm average, additional unspecified activity,
strength and pole-vaulting work, a controlled easy ride, and a long hike — so Week 2 was kept deliberately
```

```
conservative to absorb that load. Week 2 delivered its aerobic purpose: both strength sessions were
completed, a rowing and running double replaced the planned trainer ride on Wednesday, and a 2 h 05 min hike
at 114 bpm average substituted for Saturday's planned indoor ride, all within the 140 bpm ceiling. The
cadence-specific cycling stimulus was missed this week, so it becomes the primary focus of Week 3 alongside
the first controlled threshold introduction. Every aerobic session remains capped below 140 bpm until Week
3's single threshold block, and strength work is logged separately to avoid stacking leg load. The 225 W FTP
baseline is retained because no fresh threshold test or sustained power evidence justifies a change. The
block's seven-week structure positions the athlete to enter the Winter Build block in early December with a
reliable aerobic engine, efficient cadence habits, and enough structural strength to handle the climbing
demands of the AMR build that follows.",

    "title": "Short Easy Aerobic Run",
    "description": "About 30 minutes of easy running on the treadmill at heart rate 115-135 bpm, flat or at
1% incline, with relaxed cadence around 165-170 steps per minute. Keep the effort conversational from the
first minute and let pace fall away rather than pushing heart rate up on any incline. Indoors because rain
and 7 m/s gusts are forecast through the day.",
    "durationMinutes": 30,
    "intensity": "easy",
    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this run removes the only running-specific stimulus in the week and
breaks the aerobic continuity that carries into the AMR build. Running durability compounds slowly, and each
missed easy session is a small but real step back from the multi-day mountain terrain you will face in
February. The cost of 30 easy minutes is negligible; the cost of skipping it consistently is a weaker
running base when the Atlas Mountain Race demands it.",

10.0/12.5

Qwen: Qwen3.8 2.4T A95B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	C	D	210.0 s	$0.3223	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00652	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate matches the planned Friday gym session on date, status, workout type, moderate intensity, 45 minutes, indoor flags, TSS and FTP, and it correctly leaves bikeWorkout null. The exercise selection fits the back-safety constraints: knee-height pulls, two split-squat sets, lat pulldowns and dead bugs, with explicit rest and a heart-rate gate before each set. Weaknesses are that the pull and pulldown loads are not anchored to the athlete's recorded loads, and the rationale is solid but leans on general hinge and back-resilience language. The stop condition for back pain and the separate mobility routine are useful additions. Season revision: The response keeps the eight-key contract, returns seven contiguous week sessions, leaves tomorrow, nextWeek and nextBlock null, and keeps block 1 starting on 2026-10-21 with season blocks that tile to the season end. Atlas is named in the season goal and the Atlas build block, and the post-Atlas and PBP blocks are sensible. Weaknesses: the block 1 name and focus are unchanged and its weeks barely move toward Atlas, the current week and today rationales never mention Atlas, the season end date of 2027-08-29 is an assumed PBP date, and the multi-month continuous season sits uneasily with the athlete's stated four-month ceiling beyond the deload weeks. The current week merges the Wednesday rowing and run into one session, which blurs the recorded activities, and today's optional flag is justified but the run's contribution to the Atlas goal is thin.

    "goal": "Finish the Atlas Mountain Race on 28 February 2027, complete a 200 km brevet comfortably in
April, and build durable endurance for Paris-Brest-Paris in August 2027.",
    "rationale": "The season runs from 21 October 2026 to 29 August 2027, assuming Paris-Brest-Paris falls
late in August. The primary targets are the Atlas Mountain Race on 28 February 2027, a 200 km brevet in
April, and Paris-Brest-Paris in August. Because you have found disciplined training sustainable for no more
than four months, the plan uses short progressive blocks, frequent deloads, conservative volume increases,
and cross-training to keep the load durable. The first block rebuilds aerobic consistency and strength
without overloading. The winter block maintains cycling specificity while using skiing and easy running. The
Atlas block develops sustained power and climbing durability before a post-race recovery block. The April
brevet block converts that fitness into 200 km pacing, and the final blocks rebuild and taper for Paris-
Brest-Paris.",

Combined components (weaker of the two prompts): Contract 1.1/1.5 · Fidelity 1.4/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean and matches the required today shape, and the session correctly stays a planned 45-minute moderate indoor gym day with bikeWorkout null and FTP 220 W. The exercise list follows the weekly plan and the athlete's recent feedback, including elevated hinge pulls, two split-squat sets, rest periods and the heart-rate ceiling. The main weakness is that the pull load is only described as light, with no load progression, RPE target, or stop condition for the back, and the rationale leans somewhat on generic benefits. Season revision: The season and block name Atlas Mountain Race Preparation, block 1 keeps its 2026-10-21 start, and the season tiles cleanly through 2027-08-31 with Paris-Brest-Paris preserved. The Atlas block, however, ends on the race date itself, so there is no taper before Atlas and the taper blocks come only after the brevet, which is a design flaw. The output also adds coachQuestion and modelsRemarks at top level despite the request for exactly eight keys, and it rewrites completed past sessions by merging the rowing and run and changing durations and TSS. Today's easy treadmill run is sensible and well explained, and the athlete's 4-month limit is addressed through embedded deloads.

TODAY PLAN

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.4/3 · Rationale 1.7/2 · Grounding 1.8/2 · Detail 1.4/2

Judgment: The JSON is clean and matches the required today shape, and the session correctly stays a planned 45-minute moderate indoor gym day with bikeWorkout null and FTP 220 W. The exercise list follows the weekly plan and the athlete's recent feedback, including elevated hinge pulls, two split-squat sets, rest periods and the heart-rate ceiling. The main weakness is that the pull load is only described as light, with no load progression, RPE target, or stop condition for the back, and the rationale leans somewhat on generic benefits.

9.9/12.5

DeepSeek: DeepSeek V4.1 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A	A+	80.2 s	$0.0136	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00649	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, 45-minute moderate gym session, 220 W FTP and 30 TSS all match the current plan, and the exercise list is specific with sets, reps, rest and a heart-rate recovery gate. However, the plan calls for three steady goblet squat sets this week and the candidate drops goblet squats entirely while using two split-squat sets as specified, so the session departs from the prescribed week structure without explanation. The optionalRationale is well grounded in the back and sit-bone problems and the block focus, but the description also embeds a Rationale label inside the workout text, which is messy, and it omits RPE or load-progression guidance for the new pull and lat pulldown loads. Season revision: The season was genuinely refreshed: it names the Atlas Mountain Race, keeps block 1 starting on 2026-10-21, and tiles the blocks contiguously through 2027-08-29 with PBP in its own block. The Atlas build is a separate block ending on the race date, but there is no pre-race taper before 28 February and the April 200 km brevet is not explicitly placed inside the brevet block. Block 1 itself changed only lightly, mainly in its rationale and week 2 target load, and its name and focus still do not mention Atlas. The current week and today's session are coherent and keep the supplied planned workout, though the past Wednesday rowing and run were merged into one session, which alters the record somewhat.

    "description": "Warm up 5–8 min easy row/bike/walk plus dynamic hip openers, cat-cow, 90/90, glute bridges, and bodyweight squats. Main: 1) elevated knee-height rack pulls or trap-bar pulls from blocks, 3x8 light-moderate with a flat back and no rounding, resting 90–120 s; 2) bodyweight split squats, 2x10 per leg, controlled tempo, 90 s rest; 3) glute bridges, 3x12; 4) lat pulldown, 3x10 at 45–50 kg as form allows; 5) Pallof press, 3x10 per side; 6) front plank, 3x30–40 s. Finish with the 8-min hip/spine mobility circuit. Keep rest long enough that heart rate drops below 110 bpm before each set. Rationale: this is your second strength exposure of Week 1, rebuilding safe hip-hinge mechanics and core stability for long-distance cycling posture and lower-back resilience without excessive fatigue.",
    "optional": false,
    "optionalRationale": "This session builds the hip-hinge and posterior-chain strength that protects your back on long climbs and supports a more sustainable cycling posture, while the core work addresses your sit-bone discomfort and injury history. It contributes to the Autumn Re-Entry block's focus on safe strength and mobility and to Week 1's 5.0–5.5 h multimodal target load. Skipping it costs you the chance to establish the safe elevated hinge pattern and core stability that underpins your 200 km brevet and Paris-Brest-Paris durability while preserving muscle during fat loss."

SEASON REVISION

9.6/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
60.6 s	**$0.0122**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.5/2

Judgment: The season was genuinely refreshed: it names the Atlas Mountain Race, keeps block 1 starting on 2026-10-21, and tiles the blocks contiguously through 2027-08-29 with PBP in its own block. The Atlas build is a separate block ending on the race date, but there is no pre-race taper before 28 February and the April 200 km brevet is not explicitly placed inside the brevet block. Block 1 itself changed only lightly, mainly in its rationale and week 2 target load, and its name and focus still do not mention Atlas. The current week and today's session are coherent and keep the supplied planned workout, though the past Wednesday rowing and run were merged into one session, which alters the record somewhat.

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027 and Paris-Brest-Paris in August 2027, with a comfortable randonneur brevet series including a 200 km brevet in April 2027, by building durable aerobic endurance, efficient cadence, sustained power, and fatigue resistance while respecting a history of maintaining disciplined training for about four months at a time.",
    "rationale": "The season is shaped around two ultra-distance targets: Atlas Mountain Race on 28 February 2027 and Paris-Brest-Paris in August 2027, with a 200 km brevet in April as the first randonneur milestone. Because you have historically sustained disciplined training for about four months, the year is split into shorter blocks with recovery weeks and cross-training. The current aerobic base and strength block builds durability and cadence without stacking fatigue; winter build adds controlled threshold work and skiing/running cross-training; Atlas-specific build extends endurance and fueling; post-Atlas recovery leads into brevet-specific pacing; the long PBP build develops repeated long rides and fatigue resistance; and the final taper reduces volume while retaining brief intensity.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control.",
    "rationale": "The week delivered its aerobic purpose without the cadence-specific cycling: two strength
sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed Thursday trainer
ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned 90-minute
trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the week closes
with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and Sunday stays
deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-minute run
keeps running-specific durability alive at minimal cost, and the week's remaining priority — cadence above
85 rpm from the first minute of every ride — carries into next week, because repeatable efficiency at low
intensity is what carries you through long-distance cycling.",

minimax/minimax-m3.1-flash

9.9/12.5

MiniMax: MiniMax M3.1 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A	A+	59.9 s	$0.0142	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00689	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 1.4/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The response matches the required today object, uses the correct date, planned status, workout and moderate values, 45 minutes, indoor flag, 30 TSS and 220 W FTP, and it keeps the session as the gym day the plan specifies. The exercise prescription is specific, with sets, reps, rest periods, knee-tracking and hinge cues, a heart-rate ceiling below 110 bpm before pulls, and a mobility finish, though the rack or trap-bar pull load is only described as light and the lat pulldown load is a loose range. The rationale ties the session to posterior-chain and spine stability for the saddle and the brevet goals and states a concrete cost of skipping, but the content is partly repeated between description and optionalRationale. Season revision: The plan works Atlas into the season, block names and block 1 focus and rationale, keeps block 1 starting on 2026-10-21, and the season blocks tile cleanly to 2027-08-29 with consistent week counts. It also leaves tomorrow, nextWeek and nextBlock null and fully details today. Weaknesses: the output adds coachQuestion and modelsRemarks beyond the eight requested top-level keys, the Atlas build block ends on race day with no taper before it, the season rationale mentions a four-week taper that the final block (three weeks) does not match, and the coachQuestion asks about Atlas details the plan could have assumed conservatively. The Wednesday double was also merged into one past session, which alters the recorded history.

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Friday Gym Strength B is the second strength exposure of the re-entry week, and it
targets exactly the chain that is limiting you right now: hips and posterior chain for a back-safe hinge,
quads that are still re-adapting to loaded work, and trunk control for long rides. Your pulling and core
strength are clearly ahead of your legs, and both your 22 October and 27 October sessions ended with quad
burn, so the hinge is rebuilt light and unloaded while the squat and split-squat volume stays conservative.
Session (45 min, moderate): (1) Warm-up 8 min — 4 min easy walk/cycle on gym equipment at conversational
effort, 2 min bodyweight hip-hinge rehearsal with a flat back (band pull-aparts or wall glute), 2 min 90/90
hip rotations plus a deep squat hold with heels down, holding support if needed. (2) Goblet squat 12 kg, 3
sets × 8–10 reps — take a full 120 s rest before the third set and end the set if the quad burn returns;
knees track over toes. (3) Elevated knee-height rack pull or trap-bar pull at a light load, 3 sets × 8 reps
— flat back, ribs stacked, hips hinge back, drive the floor away; 90–120 s rest between sets so heart rate
settles below 110 bpm before each pull. (4) Bodyweight split squat, 2 controlled sets × 6–8 reps per leg,
90–120 s rest, full foot pressure through the arch. (5) Lat pulldown, 3 × 10 at a load you can control
cleanly (around 40–50 kg as tolerated, no grinding reps). (6) Pallof press 3 × 10 per side with a slow
braced hold, then plank 3 × 30–40 s, stopping each rep before your back rounds. (7) Finish with your 8-
minute hip/spine mobility circuit: couch stretch or low lunge, standing forward fold with soft knees, 90/90
hip rotations, deep squat hold, supine figure-4 glute stretch, cat-cow. This session is right for you now
because it keeps every load in the moderate Zone 2 range that supports steady fat loss without triggering
the evening hunger spikes you fight, while giving the hip hinge and spine the specific stimulus that
protects you on long climbs, in the saddle and in crouching work.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain hinge control, quad capacity and core
stability that let you hold a pain-free riding position and absorb the hours on the bike that your April 200
km brevet and August 2027 Paris-Brest-Paris require, and it is the second strength exposure that makes this
block's conservative two-day gym structure work. The week's target load is 5.0–5.5 hours (two 42–45 min gym
sessions, a 47 min run/row combo, a 65 min Zone 1–2 ERG ride, a capped 2 h hike, plus daily 8-minute
mobility). Skipping it removes your only posterior-chain and spine-stability stimulus for the week, slows
the back-safe hinge rebuild, and leaves the weekend hike and Sunday ERG ride carrying your legs without the
stability work beside them, so the cost is real and the session is not optional today."
  }
}
```

SEASON REVISION

    "goal": "Peak for the Atlas Mountain Race on 28 February 2027, complete the first 200 km brevet in early
April 2027, and build to Paris-Brest-Paris in August 2027 with durable aerobic endurance, efficient climbing
cadence, and enough strength to handle long days on the bike.",
    "rationale": "The season is built around two peaks and a sustainable middle. The first peak is the Atlas
Mountain Race on 28 February 2027, which you have signed up for and which rewards climbing-specific
endurance, sustained power and back-to-back load; the second is Paris-Brest-Paris in August 2027, a 1200 km
challenge that demands very high aerobic volume and overnight durability. The 200 km brevet in early April
2027 sits between them as the first step of the randonneur series and as a low-stakes test of the fueling
and pacing you will use in August. Because you have said disciplined training rarely holds for more than
four months, the season is deliberately shaped as two arcs of roughly four months each with a genuine reset
between them: an October-to-February build that peaks at the mountain race, a short recovery and brevet
block in March and April, then a second arc from May to August that rebuilds toward Paris-Brest-Paris with a
mid-season reset in late May and a four-week taper. Every block keeps aerobic work capped, strength logged
separately, and missed minutes unrecovered, because consistency across the arcs is what will actually get
you to both goals.",
    "startDate": "2026-10-21",
    "endDate": "2027-08-29",

```

```
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy minutes maintains the running-specific durability that supports your cycling base through the winter and costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic. With the season now built around the Atlas Mountain Race on 28 February and Paris-Brest-Paris in August, this kind of cheap, repeatable aerobic work is exactly what keeps a four-month training arc sustainable.",
    "optional": true,
    "optionalRationale": "The cost of skipping is genuinely small: 30 minutes of easy running builds running-specific durability that returns within days and adds no threshold fitness you would miss in the Atlas Mountain Race build. The session that matters this week is Monday's controlled threshold stimulus, and starting it with heavy legs from Saturday's hike is the more expensive mistake.",

moonshotai/kimi-k2-0905

9.9/12.5

MoonshotAI: Kimi K2 0905

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A	78.4 s	$0.0257	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00658	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate returns clean JSON with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and null bikeWorkout, and it follows the week plan's Gym Strength B structure with elevated knee-height pulls, two split-squat sets and a flat-back hinge cue. It reflects the athlete's feedback on the back, heart-rate recovery before sets, lat pulldown loads and the 90 to 120 second rest. Weaknesses include a warm-up that adds volume the 45-minute budget may not absorb, an unlisted band requirement, no RPE or stop conditions, and a rationale that leans somewhat on generic consequences of skipping. Season revision: The season is credibly re-shaped around Atlas on 28 February 2027, with named AMR build, recovery and PBP blocks that tile contiguously, and block 1 correctly starts on 2026-10-21 with no coachQuestion. However, the current block's weeks and focus are essentially unchanged from the prior plan, so Atlas preparation barely reaches the active block beyond a rationale sentence, and the seven-week base does not explicitly plan around the four-month discipline ceiling. The season rationale also introduces AMR and PBP distances of 1,150 km and 1,200 km that are not in the input. Today's session keeps its supplied content with a proper completion note, and the week has seven coherent sessions, but the outline days carry little concrete detail. Hard gates failed: block 1 is unchanged.

```

```
    "bikeWorkout": null,
    "description": "Your second gym session of the week introduces the safe hip-hinge progression your back needs. After a 5-minute general warm-up (light rowing, walking, or cycling), complete 2 rounds of: 10 bodyweight hip hinges (hands on hips, flat back, minimal knee bend), 10 walking lunges, and 10 band pull-aparts. Then the main work: Elevated rack pulls or trap-bar deadlifts from knee height, 3 sets of 8 reps at a light load (start with 40–50 kg or empty trap bar), resting 90–120 seconds between sets and letting your heart rate drop below 110 bpm before each set—focus on a flat-back hip hinge, pushing hips back first, not lifting with your lower back. Follow with bodyweight split squats, 2 sets of 8 reps per leg (rear foot elevated on a step if comfortable), resting 60–90 seconds between sets. Finish with: lat pulldown 2x10 at a moderate load (40–50 kg), Pallof press 2x10 per side, and a 30-second plank hold. Conclude with your 8-minute hip/spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength and hip-hinge pattern that protects your lower back on long climbs and allows a more aerodynamic cycling posture, directly addressing your sit-bone discomfort and back pain goals. The elevated pulls specifically retrain your hinge without the injury risk of floor deadlifts. Skipping this leaves your back vulnerable and delays the postural improvements that underpin your PBP and tour race ambitions."

    "goal": "Complete Atlas Mountain Race on 28 February 2027, then Paris-Brest-Paris in August 2027, with the ability to comfortably finish randonneur brevets including a 200 km in April 2027. Build sustainable training habits that respect the athlete's 4-month discipline ceiling.",
    "rationale": "The season now spans two major ultra-endurance events: Atlas Mountain Race (1,150 km self-supported) in late February and Paris-Brest-Paris (1,200 km) in August. This demands a double-peaked structure with early base building, a focused February build for AMR, recovery and brevet series maintenance through spring, then a second build for PBP. The athlete's history of 4-month discipline limits means each block must be self-contained with clear purpose, and the winter block must preserve motivation through variety (skiing, running) while maintaining cycling specificity. The 200 km April brevet becomes a fitness check and pacing rehearsal rather than the season's peak.",

    "rationale": "This seven-week block establishes the aerobic foundation and movement patterns that will
carry through winter into AMR-specific training. The athlete's 4-month discipline limit means this block
must feel achievable and purposeful from day one. Recent training shows good aerobic control (114 bpm
average on Saturday's hike, 116 bpm on the 24 October ride) but persistent cadence issues (78 rpm on 23
October, 66 rpm on 11 October road ride). The block therefore prioritizes: (1) strict aerobic ceiling at 140
bpm with immediate cadence above 85 rpm on all cycling, (2) separated strength work that builds durability
without competing with aerobic sessions, (3) gradual volume progression from ~3 hours to ~6.5 hours weekly,
and (4) a Week 4 deload to preserve freshness. The 225 W FTP is retained; no threshold work appears until
Week 3, and only if Weeks 1-2 demonstrate stable execution.",

meta/muse-spark-1.2

Meta: Muse Spark 1.2

9.9/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	22.0 s	$0.0685	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00680	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.1/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate keeps the correct date, planned status, 45-minute indoor gym workout, FTP of 220 W, TSS of 30 and null bikeWorkout, and returns only the requested today object. The exercise list is specific, with sets, reps, rest, load ranges, knee-height pulls instead of floor deadlifts, and split squats capped at two sets, which follows the week plan and the athlete's back history. Weaknesses: the rationale and optionalRationale overstate the link to saddle blisters and PBP durability, the 40-50 kg pull load is assumed without a clear note, and there are no explicit pain stop conditions or fallback for a missing trap bar. Season revision: The response names Atlas throughout the season, block 2 and block 1 rationale, keeps block 1 starting on 2026-10-21, returns contiguous blocks through 2027-08-22, and leaves tomorrow, nextWeek and nextBlock null as required. Block 1 itself is only lightly changed: its name, focus and seven week rows are essentially unchanged, and the main change is a rationale that adds Atlas and PBP context, so the block revision is thin. The Thursday-to-Saturday week is coherent, but the completed Wednesday row was merged with the run into one 47-minute session, altering a past record, and the today description was edited slightly despite being supplied. Some content is not grounded in the input, such as night-riding tolerance and self-supported bikepacking demands, and the outline days carry little concrete progression toward the Week 3 threshold stimulus. Hard gates failed: block 1 is unchanged.

    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym session (45 min) + 8-min daily hip/spine mobility after. Warm-up 5 min easy on bike
or stair machine (HR <120). Then: 1) Elevated rack pull or trap-bar block pull from knee height - 3x8 at
light load 40-50kg, rest 90-120s between sets, let HR drop below 110 bpm, flat back, hips back, no floor
pull; 2) Bodyweight split squat - 2x10/leg, rest 90s, controlled depth; 3) Glute bridge - 3x12, rest 60s; 4)
Lat pulldown - 3x10 (30kg/40kg/50kg as tolerated); 5) Pallof press - 3x10/side, rest 60s; 6) Plank - 3x30s,
rest 60s. Keep goblet squat weight out of this session to let quads recover from Tuesday. Finish with
unrecorded 8-min mobility: couch stretch/low lunge, standing forward fold soft knees, 90/90 hip rotations,
deep squat hold, supine figure-4, cat-cow - ~90s each.",
    "rationale": "Today builds the safe hip-hinge pattern and unilateral leg stability you need for a pain-
free, more aerodynamic cycling position and to eliminate sit-bone overload on long rides. Using knee-height
elevated pulls instead of floor deadlifts protects your easily irritated lower back while still loading
glutes and hamstrings, and capping split squats at 2 bodyweight sets prevents quad overload after Tuesday's
3x12kg goblet squats. Kept at moderate intensity with full recoveries, it supports steady fat loss without
spiking evening hunger.",
    "optional": false,
    "optionalRationale": "Skipping this session loses the specific posterior-chain and core anti-rotation
adaptation that carries you through long climbs without back ache and lets you hold a lower handlebar
position without saddle blisters. It is the only hinge-focused stimulus this week - missing it delays the
safe progression to heavier pulls needed for PBP durability and your 5K/10K running resilience."
  }

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, comfortably finish the 200 km brevet
series starting in April, and build toward Paris-Brest-Paris in August 2027 with durable aerobic endurance,
efficient cadence and strength for hilly terrain",
    "rationale": "The season runs 2026-10-21 to 2027-08-22 to cover Atlas, the spring brevets and PBP.
Because you have historically maintained disciplined progress for a maximum of 4 months, the plan is built
in 3-8 week blocks with a deload every 3rd-4th week, clear variation between cycling, skiing/running cross-
training and strength, and autonomy in easy sessions to sustain motivation. Block 1 rebuilds aerobic
consistency and cadence above 85 rpm after the high-load race week. Block 2 maintains cycling specificity
through winter while using skiing and easy running for durability. Block 3 peaks and tapers specifically for
the off-road, self-supported demands of Atlas on 28 February. Block 4 recovers from Atlas then rebuilds for
the April 200 km brevet, Block 5 sharpens brevet pacing, fueling 60-90 g/h and back-to-back durability, and
Blocks 6-8 build the very long-distance base, night-riding and specific endurance needed for PBP with a
final 2-week taper.",

9.9/12.5

ByteDance Seed: Seed-2.0-Code

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	C	B	276.0 s	$0.0696	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00722	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.2/2 · Design 2.2/3 · Rationale 1.5/2 · Grounding 1.2/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean with only the today root key, and it correctly keeps today as planned with a workout, moderate intensity, 45 minutes, indoor, non-outdoor, 30 TSS and 220 W, matching the plan's Friday gym session. The execution detail is strong: explicit cues, 90 to 120 second rest with a heart-rate gate below 110 bpm, conditional load progressions, a trap-bar fallback and clear stop conditions tied to the athlete's back and quad history. The rationale is well tied to the fat-loss, hip-hinge and 5K goals, but it cites a week TSS of about 217 that the input does not support, and the strength prescription is somewhat generic in its set and load choices. Season revision: The response names Atlas throughout, keeps block 1 starting on 2026-10-21, and tiles the remaining season through 2027-08-20 with an AMR-focused build, taper and post-AMR brevet phase, so the core design request is met. Its main weaknesses are fidelity and grounding errors: the block's week start dates were shifted to 10-21, 10-28, 11-04 and so on, which contradicts the supplied current week that starts 2026-10-26, and the week 1 target load invents a 165-minute hike and an easy ride the athlete did not log. Past sessions were also renamed and re-described beyond what the rules allow, and the later blocks lack much threshold or PBP-specific detail.

TODAY PLAN

    "description": "Gym Strength B (safe for lower back, per your history of back injury and quad burn
during Gym A):\n1. Pre-Warm-Up: 8-minute DAILY HIP/SPINE MOBILITY CIRCUIT (non-negotiable for posture/back
```

```
health):\n   - 90s couch stretch (low lunge, hips forward) per leg\n   - 90s standing forward fold (soft knees, gradually straighten)\n   - 90s 90/90 hip rotations (floor)\n   - 90s deep squat hold (use support if needed)\n   - 90s supine figure-4 glute stretch per side\n   - 90s cat-cow (slow spinal movement)\n2. Light Warm-Up: 5 minutes of easy SkiErg or treadmill walking (HR <100 bpm)\n3. WORKING SETS (90–120 SECONDS REST BETWEEN ALL SETS; WAIT FOR HR TO DROP BELOW 110 BPM BEFORE STARTING EACH SET):\n   a. Elevated Knee-Height Rack Pull (or trap-bar pull if available, safer than floor deadlifts): 3 sets of 8 reps @ empty bar (20kg) or lightest load. CUE: Flat back, hinge at hips, bar stays close to legs, no spinal rounding.\n   b. Bodyweight Split Squat (hold 5kg dumbbells ONLY if zero quad burn in first set): 2 sets of 10 reps per leg. CUE: Torso upright, front knee tracks over toes (not past), back knee hovers 1–2 inches above floor.\n   c. Loaded Glute Bridge (add 10–15kg plate on hips ONLY if 3x12 bodyweight reps feel EASY): 3 sets of 12 reps. CUE: Squeeze glutes at top, avoid arching lower back.\n   d. Pallof Press (cable or resistance band at chest height): 3 sets of 10 reps per side. CUE: Brace core, no torso rotation, press straight out.\n   e. Plank: 3 sets of 30 seconds. CUE: Elbows under shoulders, straight line from head to heels, no sagging/arching.\n4. Cool-Down: 3 minutes slow treadmill walking + 30s hip flexor stretch per side (kneeling)\nCRITICAL CONSTRAINTS: Stop immediately if you feel lower-back twinges, sharp pain, or quad burn exceeding Gym A's manageable level.",
    "optional": false,
    "optionalRationale": "This session directly targets 3 top season goals and this Autumn Re-Entry block's core focus:\n1. **Season Goal 1 (Sustainable Fat Loss):** Builds lean posterior chain (glutes, hamstrings) and core muscle, raising resting metabolic rate to support steady, non-hunger-triggered fat loss (avoiding evening snacking that derails progress).\n2. **Season Goal 2 (Core/Hip Strength, Eliminate Back/Saddle Pain):** Practices a SAFE hip hinge (elevated rack pulls, no floor deadlifts) to fix your upright cycling posture—reducing sit-bone pressure (preventing blisters on PBP/brevets) and lower-back fatigue (during climbs and carpentry). Pallof presses/planks build anti-rotation core stability to protect your back.\n3. **Season Goal 3 (Sub-23 5K & PBP Endurance):** Split squats build single-leg running economy (critical for your 5 May 5K) without impact, while low-moderate intensity preserves aerobic energy for weekend sessions.\n**Block Focus (Autumn Re-Entry):** This 2nd weekly gym session locks in conservative strength progression to avoid injury as you add running/rowing/cycling.\n**Week Target Load (5.0–5.5hrs, TSS ~217):** Contributes 30 TSS (moderate strength) to hit controlled weekly load without spiking fatigue.\n**What You Lose If Skipped:**\n- A critical safe hip hinge practice session, delaying posture correction (prolonging sit-bone blisters/back pain on long rides).\n- The lean muscle metabolic boost, requiring 1–2 extra weeks to reach 15% body fat.\n- Core stability gains, raising back fatigue risk during work/future training (e.g., Sunday's indoor ride).\nThis session is non-optional, as skipping directly undermines your top goals and injury-prevention focus."
  }
}
```

for the Atlas Mountain Race (AMR, 2027-02-28). It prioritizes fixing critical weaknesses from recent
training: low cycling cadence (<85 rpm), unplanned high-fatigue efforts (3hr Zwift race, pole vaulting), and
inconsistent strength logging. All aerobic work is capped <140 bpm to avoid stacking fatigue, with cadence
targets enforced from the first minute of every cycling session to build efficient pedaling for AMR’s long
climbs. Strength sessions are low-load, full-body, and logged separately to avoid accidental leg fatigue.
Weeks align with the athlete’s 2hr/weekday limit and weekend long ride availability, with no make-up
sessions for missed work (to protect consistency). The 225W FTP baseline is retained, as no valid threshold
test or sustained power data justifies a change.",

    "rationale": "This week supports Atlas Mountain Race (AMR) base building by reinforcing strict aerobic
control (all efforts <140bpm) and addressing the critical weakness of low cycling cadence (<85rpm) — a key
inefficiency for AMR's long climbs. Recent execution: Tuesday/Friday strength sessions (completed, but no
load logged), Wednesday cross-training double (15min row + 32min easy run, HR under cap), Thursday missed
cadence-focused trainer ride (no make-up, per fatigue management rules), Saturday 133min hike (substituted
for trainer ride, lacked cadence work but HR under cap). Today's short easy run maintains cross-training
durability for AMR's multi-sport base without adding fatigue before Week3's cadence-focused cycling
sessions. No make-up sessions are included to avoid stacking unplanned load, a past issue that disrupted
recovery.",

openai/gpt-6.1-terra-pro

9.9/12.5

OpenAI: GPT-6.1 Terra Pro

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A	C	76.6 s	$0.1247	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00667	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is valid and matches the requested today shape, with the correct date, planned status, indoor gym workout, 45 minutes, moderate intensity, and 220 W FTP. The session follows the Friday Gym Strength B direction from the coach replies, including elevated pulls, two split squat sets, 90 to 120 second rests, and an 8-minute mobility finish. It omits the goblet squat work that the Week 1 block plan specifies, and gives no load guidance for lat pulldowns or pulls even though the athlete's recent loads are known. The rationale is reasonable but somewhat generic compared with the specific purpose stated in the optional rationale. Season revision: The season is rebuilt around the Atlas Mountain Race with contiguous blocks through August 2027, block 1 starts on 2026-10-21, tomorrow, nextWeek and nextBlock stay null, and today's trainer ride has power targets that correctly convert to 119, 135 and 115 W at 225 FTP. Weaknesses: the current block name and focus never mention Atlas, only the rationale does; the season end date of 2027-08-31 is an assumption; the four-month training ceiling is acknowledged in prose but not clearly engineered into the progression; and past sessions were rewritten (Wednesday run and rowing merged, Tuesday TSS changed) beyond what the revision required. The original planned run for today was replaced without a clear reason tied to the new goal.

anthropic/claude-opus-4.6

9.9/12.5

Anthropic: Claude Opus 4.6

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	B	D	101.9 s	$0.2885	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00693	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.5/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is valid, has only the today root key, and matches the required date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, 220 W FTP and 30 TSS from the plan. The session is well sequenced with explicit sets, reps, rest, tempo and stop-and-regress cues for the elevated rack pull, which fits the coach's conservative hinge progression. Weaknesses: it adds a dumbbell Romanian deadlift and dead bugs that the week plan does not call for, despite this athlete's back sensitivity, and the Pallof press is described as same resistance as Tuesday, which is not supported by the Tuesday activity record. The rationale is specific to the back and hip goals but overstates the cost of skipping with an unsupported one-week delay claim. Season revision: The season is rebuilt around Atlas with a dedicated preparation block, taper and event block, post-race rebuild and brevet week, and the blocks tile cleanly with block 1 still starting 2026-10-21. Block 1 is genuinely revised (Week 3 threshold stimulus, Week 6 threshold session, adjusted loads) and names Atlas in its rationale, and tomorrow, nextWeek, nextBlock and bodyMetrics are correctly null or empty. Weaknesses: the season and block rationales use meta-language about reshaping and expanding the old plan, the season text adds unsupplied facts such as the race location in Morocco and a 55-65 percent FTP for 10-hour days, the Sunday session still reads as a full-day indoor run despite a reasonable outdoor-capable flag, and a coachQuestion is included even though Atlas was already worked into the plan.

TODAY PLAN

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B session focused on safe posterior-chain loading and single-leg stability,
followed by your 8-minute hip/spine mobility circuit.\n\n**Warm-up (5 min)**\n- 2 min brisk walk or light
bike\n- 1 min bodyweight hip hinges (hands on thighs, flat back)\n- 1 min bodyweight squats (slow tempo)\n-
1 min leg swings (10 each leg, front-to-back and side-to-side)\n\n**A1. Elevated Rack Pull or Trap-Bar
Deadlift from Knee Height**\n- 1 x 10 reps with empty bar or lightest trap bar (technique set — flat back,
brace core, drive through heels)\n- 3 x 10 reps at a light load you can control with a perfectly flat back
(start around 30–40 kg total; increase only if form is flawless)\n- Rest 90–120 seconds between sets; HR
should drop below 110 bpm before the next set\n- Cue: push the floor away rather than pulling the bar up;
keep shoulders packed and chest proud\n\n**A2. Bodyweight Split Squat (rear foot on floor)**\n- 2 x 10 reps
per leg\n- Rest 60–90 seconds between sets\n- Cue: keep torso upright, front knee tracking over toes, lower
until rear knee is just above the floor; if balance is an issue, hold a wall or rack\n\n**B1. Dumbbell
Romanian Deadlift (light)**\n- 3 x 10 reps with light dumbbells (8–12 kg each)\n- Focus on a slow eccentric
(3 seconds down), feeling the hamstring stretch; stop at mid-shin if hamstring tightness limits range\n-
Rest 60–90 seconds\n\n**B2. Cable or Band Pallof Press**\n- 3 x 10 reps per side (same resistance as
Tuesday)\n- Rest 60 seconds\n\n**C1. Side Plank**\n- 3 x 20 seconds per side (build toward 30 seconds over
coming weeks)\n- Rest 30–45 seconds between sides\n\n**C2. Dead Bug**\n- 3 x 8 reps per side (slow,
controlled, lower back pressed into floor)\n- Rest 45 seconds\n\n**Cool-down & Mobility (8 min)**\nYour
standard daily circuit: 90 seconds each of (1) couch stretch / low lunge with hips pushed forward, (2)
standing forward fold with soft knees gradually straightening, (3) 90/90 hip rotations on the floor, (4)
deep squat hold with heels down, (5) supine figure-4 glute stretch, (6) cat-cow with slow spinal
movement.\n\n**Pacing notes:** Take the full rest between every set. If the elevated rack pull causes any
lower-back discomfort, reduce the load or raise the pin/blocks higher. The goal is to groove a safe hip-
hinge pattern under light load, not to challenge maximal strength. Keep total session heart rate moderate —
brief peaks up to 130–140 bpm during working sets are fine, but recover below 110 bpm before the next set.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength and hip-hinge motor pattern that
directly addresses your lower-back vulnerability on long climbs and your inability to hold a more
aerodynamic cycling position — the exact adaptations you need to eliminate sit-bone blisters and back pain
on 200 km+ brevets and ultimately Paris-Brest-Paris. The split squats develop single-leg stability critical
for both cycling power transfer and your running progression toward the sub-23-minute 5K. The core anti-
rotation and dead-bug work reinforces the trunk stiffness that protects your spine during crouching,
carpentry, and sustained aero positions. Skipping this session delays your safe hinge progression by a full
week, leaving your back unprotected as training volume increases in Weeks 2–4 and pushing back the timeline
for loading good mornings and heavier squats that will ultimately support your cycling power and posture
goals."
  }
}
```

SEASON REVISION

9.2/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
72.1 s	**$0.1784**	**no**	**yes**	**200**	**stop**

Contract 1.2/1.5 · Fidelity 1.5/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.5/2

Judgment: The season is rebuilt around Atlas with a dedicated preparation block, taper and event block, post-race rebuild and brevet week, and the blocks tile cleanly with block 1 still starting 2026-10-21. Block 1 is genuinely revised (Week 3 threshold stimulus, Week 6 threshold session, adjusted loads) and names Atlas in its rationale, and tomorrow, nextWeek, nextBlock and bodyMetrics are correctly null or empty. RETURNED JSON

```
{
  "season": {
    "goal": "Build durable ultra-endurance fitness for the Atlas Mountain Race (February 28, 2027), then
maintain and extend that fitness through a randonneur brevet series starting with a 200 km in April 2027,
culminating in Paris-Brest-Paris in August 2027.",
    "rationale": "Your goals have expanded significantly: the Atlas Mountain Race in late February 2027 is
now the first A-event, followed by a 200 km brevet in April and Paris-Brest-Paris in August 2027. The Atlas
Mountain Race is an unsupported, multi-day ultra-distance event across mountainous terrain in Morocco,
demanding exceptional aerobic durability, climbing efficiency, self-sufficiency skills, sleep management,
```

```
and the ability to sustain moderate power output for many hours per day across multiple days. This reshapes
the season: the aerobic base block remains critical but must progress faster toward sustained multi-hour
efforts; the winter build must include longer weekend rides and threshold work to raise your ceiling; and a
specific Atlas preparation block must develop back-to-back long days, climbing cadence, fueling strategy,
and equipment familiarity before late February. After the Atlas Mountain Race, a recovery period transitions
into brevet-series preparation, maintaining the endurance base while sharpening pacing for the 200 km in
April. The season ends after the April brevet; Paris-Brest-Paris preparation will be planned in a subsequent
season. Given your stated pattern of maintaining disciplined training for a maximum of about four months,
the plan front-loads the most critical adaptations, builds in regular deload weeks to prevent burnout, and
keeps variety through cross-training (skiing, running, strength) to sustain motivation. Your current FTP of
225 W is the baseline; the priority is not raising FTP dramatically but building the durability to hold 55-
65% of FTP for 10+ hours per day across multiple days.",

z-ai/glm-5.3-flashx

Z.ai: GLM 5.3 FlashX

9.8/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	128.7 s	$0.0336	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00692	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean, uses the required today fields with valid enum values, and matches the planned 2026-10-30 moderate 45-minute gym session at the correct 220 W FTP estimate. The exercise selection is sensible for the athlete's back and hinge history, with rest guidance and an explicit load assumption for the untested rack pull. The weaknesses are a vague either-or row choice, the added row, dead bug and side plank beyond the planned split-squat and pull structure, and the unsupported claim that floor deadlifts aggravated the hinge, which the input does not state. The rationale is specific about what skipping costs, but the detail lacks RPE or rep-in-reserve guidance and clear stop conditions. Season revision: The season is credibly rebuilt around the Atlas Mountain Race on 28 February 2027, with contiguous blocks through the PBP taper, a four-month-aware build, a taper and a post-race reset, and the block 1 start kept at 2026-10-21. However, block 1 itself is only lightly changed: its name, focus and week structure are unchanged, and only its rationale mentions Atlas, so the block does not visibly reshape its later weeks for the Atlas build. The Wednesday session was also merged and re-scored in a way that alters a recorded past day, and the assumed 3-4 April brevet date and the Morocco reference are not from the input. Today's session is detailed and coherent with the week, with tomorrow, nextWeek and nextBlock correctly left null. Hard gates failed: block 1 is unchanged.

```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "45-minute Gym Strength B at the gym (rain today, so indoors regardless). Warm-up: 5 min
easy bike or rower, then 10 cat-cow and 8 slow bodyweight squats. Main work, resting a full 90–120 s between
sets and letting heart rate drop below 110 bpm before starting each set: A) Knee-height rack or trap-bar
pulls — 3x8 with the lightest sensible load (empty bar or light dumbbells; I am assuming a conservative
starting weight since we have not tested this lift yet), braced and hinging with a flat back, 2-s squeeze at
the top; B) Bodyweight split squats — 2x8–10 per leg, holding a rack for balance if needed (stay at two sets
while your quads finish adapting); C) Seated cable row or single-arm dumbbell row — 3x10 at a controlled
moderate load; D) Dead bug — 2x10 per side, plus side plank — 2x30 s per side. Finish with 3–4 min of easy
stretching, stop the recording, then complete your daily 8-minute hip/spine mobility circuit. Purpose: this
is the second of your two weekly strength sessions, safely rebuilding the hip-hinge pattern that floor
deadlifts aggravated, adding single-leg strength for climbing, and continuing the core stability work that
protects your back on long rides.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain hinge strength and single-leg stability
that your Autumn Re-Entry block exists to create — the exact qualities that will keep your back pain-free on
long climbs and reduce sit-bone pressure toward the brevets and Paris-Brest-Paris. It is one of only two
strength stimuli this week, so skipping it delays your safe hinge progression by a full week and costs you
the loading dose the 4:1 structure is built around; with tomorrow's 2-hour hike and Sunday's ERG ride still
ahead, the modest quad load here will not compromise them."
  }
}
```

SEASON REVISION

8.9/12.5

    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
```

```
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the cadence priority — above 85 rpm
from the first minute of every ride — carries into next week, because repeatable efficiency at low intensity
is what carries you through 200 km in April and the long days in Morocco.",

meta/muse-spark-open

9.8/12.5

Meta: Muse Spark Open

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	C	59.8 s	$0.1050	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00670	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.2/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The response keeps the planned Friday gym session with the correct date, planned status, moderate 45-minute workout type, indoor flags, null bikeWorkout and 220 W FTP, and it does not invent a completed activity. The exercise set is sensible for the athlete's hinge and back goals, with explicit sets, reps, rest, heart-rate gating and a mobility finish, though the loads are guessed without stating an assumption and the dumbbell chest press is not in the plan. The rationale ties the session to the back, sit-bone and brevet goals, but the lat pulldown load of 35-45 kg sits below the 50 kg the athlete completed recently, which weakens the grounding. Season revision: The output is valid, mentions Atlas in the season and in the Atlas block, keeps block 1 starting on 2026-10-21, tiles the season correctly through 2027-08-22, and leaves tomorrow, nextWeek and nextBlock null as required. Its main weakness is that block 1 is barely changed: the seven week entries are copied from the supplied plan and only the block rationale was reworded. The Atlas block ends on race day with no real taper, and the season runs roughly ten months with no reset despite the athlete's stated four-month limit. The current week and today's session are coherent and grounded in the logged activities, though the rationale mentions a 2-hour hike where the log shows 2 h 05 min and the night-riding emphasis is not in the input. Hard gates failed: block 1 is unchanged.

TODAY PLAN

{
  "season": {
    "goal": "Complete the Atlas Mountain Race starting 28 February 2027, comfortably finish a 200 km brevet in early April 2027, and finish Paris-Brest-Paris in August 2027 with durable aerobic endurance, efficient cadence, and sustainable training habits",
    "rationale": "Your season now targets three ultra-endurance milestones from your current 225 W FTP: the Atlas Mountain Race starting 28 February 2027, a comfortable 200 km brevet in early April, and Paris-Brest-Paris in August 2027. You have shown you can execute controlled easy riding and hiking under 140 bpm, but the 3-hour Zwift race at 187 bpm and the extra pole-vaulting load showed how quickly fatigue stacks, and you have noted you typically lose momentum after 3-4 months of disciplined training. This plan therefore builds your aerobic base and cadence above 85 rpm first, then uses winter skiing and easy running for variety to keep you engaged, adds Atlas-specific bikepacking durability with back-to-back long rides and fueling practice, gives you a short recovery before translating that fitness into steady brevet pacing, and finally extends long-ride durability and night-riding skills for PBP. Each block progresses only when you hold the HR ceiling and cadence target, with planned deloads and cross-training to protect freshness and adherence all the way to August.",

openai/gpt-5.6-terra

OpenAI: GPT-5.6 Terra

9.8/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	A+	C	39.6 s	$0.1136	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00666	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean and matches the requested today shape, and the date, planned status, workout type, moderate intensity, 45-minute duration, indoor flags, 30 TSS and 220 W FTP all agree with the current plan. The session is well sequenced with explicit sets, reps, rest and a stop condition for back discomfort, and the rationale ties the hinge and core work to sit-bone pressure and back durability. Weaknesses: the week plan calls for holding goblet squats at three sets, and this session drops that squat pattern entirely, and several loads are left as vague terms like light load or controlled load with no progression guidance or RPE target. Season revision: The season is rebuilt around the Atlas Mountain Race with a named Atlas Build block ending 28 February 2027, PBP in August 2027 is preserved, the season blocks tile contiguously, block 1 starts on 2026-10-21, and tomorrow, nextWeek and nextBlock stay null, so the core structure is sound. Block 1 itself is barely changed: its name, focus and seven weeks are essentially the supplied ones, with only the block rationale reworded, so the Atlas adjustment does not reach the current block as the request asked. The Atlas block has no taper before the 28 February race, and the final block's three-week count does not match its 16-day span. The current week and today's session are coherent and grounded in the logged activities, with no invented metrics and bodyMetrics correctly empty.

TODAY PLAN

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "Complete this indoor gym session with controlled technique and 90–120 seconds of rest between working sets, waiting for your heart rate to fall below about 110 bpm before the next set. Start with 5 minutes of easy bike or treadmill walking, then perform: elevated knee-height rack pulls or trap-bar pulls, 3 x 8 with a light load and a neutral spine; bodyweight split squats, 2 x 8 per side; glute bridges, 3 x 12; lat pulldowns, 3 x 10 at a controlled load; Pallof press, 3 x 10 per side; and planks, 3 x 30 seconds. Finish with your 8-minute hip/spine mobility circuit. Stop any hinge set immediately if you feel back discomfort, and keep the rack-pull height at knee level rather than progressing toward floor pulls. This session builds the posterior-chain, single-leg, anti-rotation, and trunk endurance you need for a more sustainable cycling position, lower-back resilience on long climbs, and reduced pressure through your sit bones on future brevet rides.",
    "optional": false,
    "optionalRationale": "Skipping this session would leave a gap in the safe strength foundation that supports your hip mobility and lower-back durability for long-distance cycling. The controlled hinge and core work are particularly important for building the stable posture needed to progress toward 200 km brevets and Paris-Brest-Paris without recurring back fatigue."

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.3/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and 220 W FTP, and the gym session follows the plan's hinge-and-core direction with elevated pulls, split squats and Pallof work. The description is fairly specific, with RPE, rest guidance and a heart-rate cue drawn from the coach analysis, though the opening says 3 rounds while several exercises use different set counts, which creates some ambiguity. The rationale ties the session to the back, hinge and tomorrow's hike reasonably well but leans on a generic metabolic claim, and there is no fallback for equipment or pain. Season revision: The candidate names Atlas in the season goal and blocks, keeps block 1 starting on 2026-10-21, returns all eight keys with seven week sessions, and leaves tomorrow, nextWeek and nextBlock null as required. Its weaknesses are that the current block name, focus and rationale never mention Atlas, the Atlas race date falls mid-block inside a block that ends after it, and the final PBP taper block runs 23 days while labelled as three whole weeks. The block rationale also invents an early-October overload, and the season and week rationales contain meta wording about refreshing or replacing the plan. Past session TSS values and titles were rewritten without clear basis.

{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 2027-02-28 and Paris-Brest-Paris in August 2027, with a comfortable 200 km brevet in early April as an intermediate milestone. You will arrive strong, aerobically durable, and fatigue-resilient after a structured progression that respects your four-month consistency window and emphasises efficient cadence, fueling practice and multi-day recovery.",
    "rationale": "The refreshed season extends through the August 2027 Paris-Brest-Paris and tiles eight logical blocks from today to 2027-08-31. The current block keeps its 2026-10-21 start and continues building a broad aerobic base with low-load strength—essential foundation for ultra-distance cycling. Winter then blends cycling specificity with skiing and running to maintain volume without monotony, followed by a sustained-power build that peaks for Atlas Mountain Race. A short taper carries freshness into the race, after which recovery and brevet-specific work lead into the April 200 km. A long PBP build follows, culminating in a taper and race-readiness block in August. Each block duration fits whole weeks, tiles without gaps or overlaps, and manages your known four-month adherence horizon by resetting focus before motivation traditionally drops.",

anthropic/claude-sonnet-5

9.8/12.5

Anthropic: Claude Sonnet 5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
C	D	E	457.0 s	$0.5599	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00694	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and 220 W FTP all match the plan and no activity is wrongly marked completed. The session is a sensible hinge and core gym day with rest periods, a heart-rate recovery cue and a mobility follow-up, but it gives no load progression, RPE guidance or fallback if the back or hip flexors flare. The rationale is specific to the back, saddle and PBP goals, though the claim about sitting lower on the bike is speculative and the description does not draw on the athlete's logged lat pulldown loads. Season revision: The plan works Atlas into the season, the focus and rationale of block 1, and the later blocks, while keeping block 1 starting on 2026-10-21, the season tiling cleanly to 2027-08-22, and tomorrow, nextWeek and nextBlock null. Its weaknesses are that the output returns ten top-level keys including coachQuestion and modelsRemarks when the revision asked for exactly eight, and that it adds an unprompted coachQuestion about bike type and terrain. The design also runs structured training for roughly ten months without the reset the athlete said they need after about four months, and the block rationale partly narrates what changed from the prior plan. It also asserts Atlas details such as self-supported bikepacking that the athlete never supplied.

TODAY PLAN

10.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
29.0 s	$0.0678	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.9/2 · Design 2.4/3 · Rationale 1.6/2 · Grounding 1.7/2 · Detail 1.4/2

Judgment: The JSON is clean, the date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and 220 W FTP all match the plan and no activity is wrongly marked completed. The session is a sensible hinge and core gym day with rest periods, a heart-rate recovery cue and a mobility follow-up, but it gives no load progression, RPE guidance or fallback if the back or hip flexors flare. The rationale is specific to the back, saddle and PBP goals, though the claim about sitting lower on the bike is speculative and the description does not draw on the athlete's logged lat pulldown loads.

    "bikeWorkout": null,
```

```
    "description": "5 min dynamic warm-up: hip circles, leg swings, cat-cow, 90/90 hip rotations. Main
circuit, resting 90-120 seconds between sets so heart rate drops below 110 bpm before each lift: 1) Elevated
knee-height trap-bar or rack pulls, 3x8, light-to-moderate load, strict flat-back hip hinge, push hips back
rather than bending the spine. 2) Bodyweight split squats, 2x10 per leg, slow controlled tempo, knee
tracking over toes. 3) Seated cable row or lat pulldown, 3x10, moderate load, full scapular retraction. 4)
Pallof press, 3x10 per side, slow anti-rotation hold. 5) Side plank, 3x30 seconds per side. Finish with 5
minutes of static hip-flexor and glute stretching. Follow with your unrecorded 8-minute evening hip/spine
mobility circuit as usual.",
    "optional": false,
    "optionalRationale": "This session rebuilds a pain-free hip hinge and the postural/core strength that
lets you sit lower on the bike without loading your sit bones or aggravating your back on long climbs —
exactly the core-flexibility and back-durability goal behind your PBP buildup. Skipping it stalls the
gradual hinge-loading progression (elevated rack pulls) you need before heavier posterior-chain work later
in the block, and leaves the anti-rotation core strength from Pallof presses and side planks undertrained,
which is the stability that currently causes your climbing back ache and saddle discomfort on very long
rides."
  }
}
```

SEASON REVISION

9.1/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
428.0 s	**$0.4922**	**yes (2 attempts)**	**yes**	**200**	**stop**

Contract 0.9/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.7/2

Judgment: The plan works Atlas into the season, the focus and rationale of block 1, and the later blocks, while keeping block 1 starting on 2026-10-21, the season tiling cleanly to 2027-08-22, and tomorrow, nextWeek and nextBlock null. Its weaknesses are that the output returns ten top-level keys including coachQuestion and modelsRemarks when the revision asked for exactly eight, and that it adds an unprompted coachQuestion about bike type and terrain. The design also runs structured training for roughly ten months without the reset the athlete said they need after about four months, and the block rationale partly narrates what changed from the prior plan. It also asserts Atlas details such as self-supported bikepacking that the athlete never supplied.

RETURNED JSON

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race (an ultra-distance, mixed-terrain, self-supported bikepacking
race) on 28 February 2027 with the climbing durability, sustained-effort capacity, and self-sufficiency it
demands; then recover and comfortably finish a 200 km brevet in April 2027 as the opening event of a
randonneur series; then complete Paris-Brest-Paris (1200 km) in August 2027.",
    "rationale": "The Atlas Mountain Race on 28 February 2027 is now the nearest and most demanding target,
only about 17 weeks away, so it reshapes the whole season: the current aerobic and strength foundation must
transition into climbing-specific, sustained-power, off-road-capable fitness before a short taper into the
race, rather than drifting toward the April brevet as the first priority. You have told me disciplined
training has never held for more than about four months, which is almost exactly the window between now and
the race, so the plan concentrates the highest-value adaptations (aerobic durability, cadence efficiency,
strength, then sustained climbing power and pacing) into that stretch rather than spreading them thin. After
the race, a dedicated recovery and rebuild period protects you from the fatigue an ultra-distance event
leaves behind before you take on the 200 km brevet, and the remaining months progress you through the
randonneur series toward the 1200 km demands of Paris-Brest-Paris in August, with a short taper before that
final event. Exact dates for the April brevet and for Paris-Brest-Paris 2027 were not given, so the block
boundaries around them are conservative estimates (brevet assumed mid-April, PBP assumed mid-to-late August)
and may need to shift slightly once you confirm them.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue,
while laying the groundwork for the climbing and sustained-effort demands of the Atlas Mountain Race",
    "rationale": "This block's name, dates, and seven-week structure stay as planned because the underlying
need has not changed: your recent training (a three-hour race, an unlogged activity, mixed strength and
pole-vaulting load, and a long hike) left you in genuine need of a conservative aerobic rebuild with strict
heart-rate and cadence control before any harder work. What has changed is the purpose this foundation now
serves: with the Atlas Mountain Race only about seventeen weeks away, this is the only block available to
establish the low-intensity durability, cadence efficiency, and basic strength that climbing-heavy,
sustained, off-road riding will demand, before the next block can safely load climbing-specific and
sustained-power work. The FTP baseline stays at 225 W since no fresh threshold evidence has appeared. Weeks
1-2 prioritize absorbing recent fatigue under a 140 bpm aerobic ceiling and 85+ rpm cadence target; Week 3
introduces a single controlled threshold stimulus; Week 4 deloads before volume climbs again; Weeks 5-6
rebuild volume and begin layering short climbing-style or gradient-simulating efforts relevant to Atlas
Mountain Race terrain; Week 7 consolidates before the Winter Build block takes over AMR-specific climbing
and endurance progression. Given the limited daylight and wet or snowy forecast through Trondheim this
period, most structured intensity stays indoors on the trainer, with hiking and easy running used as low-
risk aerobic cross-training.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "This week has delivered its aerobic purpose without much cadence-specific cycling: two
strength sessions landed as planned, a Wednesday indoor row plus easy run covered aerobic volume, Thursday's
trainer ride was missed with no make-up attempted, and Saturday's 2 h 05 min hike at 114 bpm substituted for
the planned 90-minute ride while staying well under the aerobic ceiling. Every completed effort stayed under
140 bpm, so fatigue is low heading into Sunday. Seen against the season's primary near-term goal, the Atlas
Mountain Race on 28 February 2027, this conservative, low-stress week is exactly what protects the base you
need before climbing-specific and sustained-power work begins in Week 3 and intensifies through the Winter
Build block. Missed minutes are not recovered, and the week closes with a short, easy run rather than a
make-up ride, because repeatable cadence efficiency and a controlled heart rate at low intensity matter more
right now than raw volume.",

HARD GATES	JUDGE COST	JUDGED
pass	$0.00653	anthropic/claude-haiku-5.5

Mentions Atlas **pass**	Block 1 changed or Atlas question asked **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.1/2 · Detail 1.5/2

Combined judgment: Today plan: The candidate returns only the required today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, null bikeWorkout and a TSS consistent with the plan. The gym session is well sequenced and uses the coach's earlier constraints: knee-height pulls instead of floor deadlifts, two split-squat sets, 90 to 120 seconds rest with heart rate below 110 bpm, and specific sets and reps. A weakness is that lat pulldown load of 40 to 45 kg sits below the 50 kg the athlete completed last session without explanation, and the optionalRationale is somewhat generic about back resilience rather than tied to the current block's load targets. Season revision: The season is clearly refreshed around the Atlas Mountain Race on 28 February 2027, block 1 starts on 2026-10-21, the blocks tile contiguously, and the Atlas-specific build, taper and post-race reset are sensibly ordered. However, the current block is barely changed: its name, focus, and week targets are essentially the old ones, with only the block rationale rewritten to mention Atlas, so the block revision is thin. The season misnames Paris-Brest-Paris as Paris-Brest-Proust in several places, a factual error against the supplied input, and the final block's weekCount of 6 does not match its 2027-07-26 to 2027-08-31 dates. The current week and today's session are coherent and well grounded in the logged activities, but today's session is nearly unchanged from the supplied one, and the coachQuestion about gravel bikes is a reasonable but unnecessary clarification given that Atlas is already built into the plan.

    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Indoor gym session focused on rebuilding your hip hinge and posterior-chain strength
without loading your back or quads too aggressively. Warm-up 8 min: 5 min easy row or bike, then leg swings,
90/90 hip rotations, cat-cow, and 10 bodyweight squats. Main work: elevated knee-height trap-bar or rack
pulls 3 x 8 at RPE 6–7 with a flat back and braced core, resting 90–120 sec and letting heart rate fall
below 110 bpm before each set; bodyweight split squats 2 x 8 per leg, controlled and pain-free; glute
bridges 3 x 12; lat pulldown 3 x 10 at 40–45 kg; Pallof press 3 x 10 per side; dead bug 3 x 8 per side.
Finish with 5 min of couch stretch, figure-4 glute stretch, 90/90 rotations, and cat-cow. Keep the split
squats at two bodyweight sets and stop any set if quad burn becomes limiting. Complete your daily 8-minute
hip/spine mobility circuit later in the day.",
    "optional": false,
    "optionalRationale": "This session builds the hip-hinge strength, unilateral leg control, and core
stability that protect your lower back on long climbs and support a more comfortable cycling posture.
Skipping it would slow the posterior-chain and trunk resilience you need for the 200 km brevet and the
longer PBP build."

SEASON REVISION

8.6/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
72.6 s	**$0.00577**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 1.1/2 · Design 2.0/3 · Rationale 1.6/2 · Grounding 1.1/2 · Detail 1.5/2

Judgment: The season is clearly refreshed around the Atlas Mountain Race on 28 February 2027, block 1 starts on 2026-10-21, the blocks tile contiguously, and the Atlas-specific build, taper and post-race reset are sensibly ordered. However, the current block is barely changed: its name, focus, and week targets are essentially the old ones, with only the block rationale rewritten to mention Atlas, so the block revision is thin. The season misnames Paris-Brest-Paris as Paris-Brest-Proust in several places, a factual error against the supplied input, and the final block's weekCount of 6 does not match its 2027-07-26 to 2027-08-31 dates. The current week and today's session are coherent and well grounded in the logged activities, but today's session is nearly unchanged from the supplied one, and the coachQuestion about gravel bikes is a reasonable but unnecessary clarification given that Atlas is already built into the plan.

  "season": {
    "goal": "Finish the Atlas Mountain Race on 28 February 2027 with durable, self-supported off-road
endurance, then complete a randonneur brevet series and Paris-Brest-Proust in August 2027.",
    "rationale": "The season is built as two roughly four-month macrocycles because disciplined training has
historically held for about four months at a time. The first runs from now to the Atlas Mountain Race on 28
February 2027: aerobic base and strength first, then winter endurance with skiing and easy running as cross-
training, then off-road-specific durability, load carrying and hike-a-bike, and a short taper into the race.
Morocco is the end of that cycle, not a waypoint. March is a genuine reset, and the second macrocycle
rebuilds from that platform toward the brevet series from April and Paris-Brest-Proust in August, where
volume, fuelling and night-riding practice replace off-road specificity. Splitting the year this way keeps
each build short enough to stay disciplined and gives you a real recovery point after Morocco instead of a
ten-month grind.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week delivered its aerobic purpose without the cadence-specific cycling: two strength
sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed Thursday trainer
ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned 90-minute
trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the week closes
with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and Sunday stays
deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-minute run
keeps running-specific durability alive at minimal cost, which matters more now that the Atlas Mountain Race
is the season's first target: you will spend hours on foot pushing and carrying the bike in Morocco, and
that resilience is built cheaply here.",

pass	$0.00654	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 1.8/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate enum values, 45 minutes, indoor flags, FTP of 220 W and TSS of 30, matching the current plan's Friday gym entry. The session draws well on the athlete's feedback, including the 12 kg goblet squats, elevated knee-height pulls, two split-squat sets, Pallof work and the 90 to 120 second rest with a heart-rate cue, but the prescription omits reps for most exercises even though the athlete explicitly asked for exact sets and reps. The rationale is grounded in the athlete's posture, sit-bone and back goals, though it lacks load-progression or stop-condition guidance. Season revision: The response names Atlas in the season goal, the new block 3 and the block 1 focus and rationale, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null, with the season blocks tiling cleanly to the season end. Its main design weakness is that the six-week Atlas build runs straight into the Atlas race on 28 February 2027 with no taper or recovery before the event, while the athlete's stated four-month training limit is not used to shape the later season, which runs on to August with only short breaks. The current week and today's session are coherent and respect the weather, the 140 bpm ceiling and the rules on past sessions, but the week itself never mentions Atlas and the optional flag on today's session is weakly justified.

Judgment: The response names Atlas in the season goal, the new block 3 and the block 1 focus and rationale, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null, with the season blocks tiling cleanly to the season end. Its main design weakness is that the six-week Atlas build runs straight into the Atlas race on 28 February 2027 with no taper or recovery before the event, while the athlete's stated four-month training limit is not used to shape the later season, which runs on to August with only short breaks. The current week and today's session are coherent and respect the weather, the 140 bpm ceiling and the rules on past sessions, but the week itself never mentions Atlas and the optional flag on today's session is weakly justified.

{
  "season": {
    "goal": "Successfully complete the Atlas Mountain Race on 28 February 2027, followed by a full
randonneur brevet series including a 200 km event in April 2027, and finish Paris-Brest-Paris in August
2027, with consistent aerobic endurance, efficient cadence, and sufficient strength for hilly long-distance
riding, structured to align with your observed 4-month maximum window of sustained disciplined training
progress.",
    "rationale": "This season is structured to prioritize your nearest key event first, the Atlas Mountain
Race, within your 4-month consistent training window, before progressing to the spring brevet series and
Paris-Brest-Paris. The initial aerobic base block builds low-fatigue durability, cadence efficiency, and
strength without overloading, followed by a winter cross-training block that preserves cycling fitness while
integrating skiing, then a build phase targeted directly at Atlas Mountain Race demands. Post-race, a short
recovery period precedes the brevet-specific build, followed by an extended build for Paris-Brest-Paris. All
progression is conservative to respect your observed limit on sustained consistent training, avoiding
stacked fatigue that would break training momentum.",

Z.ai: GLM 5

9.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	112.2 s	$0.0440	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00655	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.7/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid and matches the requested today object, with status planned, workout type, moderate intensity, 45 minutes, indoor flags and the 220 W estimate all consistent with the plan's Friday gym session. The exercise selection follows the week constraints by using elevated rack or trap-bar pulls instead of floor deadlifts and capping split squats at two sets, and it includes rest periods, a heart rate recovery cue and a hinge technique cue. Weaknesses include a generic warm-up, an overhead press added without much justification given the athlete's back history, and no explicit load progression or stop condition for the pulls. Season revision: The response names Atlas in the season goal, block names, block rationale and week rationale, keeps block 1 starting on 2026-10-21, and tiles the season contiguously through 2027-08-20 with PBP still in August. Block 1 is barely changed, though: its name, focus, dates and week list are identical to the supplied plan and only the rationale text was reworded, so the required genuine change is weak. The season design has a clear flaw: the Atlas Race Preparation block ends on the race date (2027-02-28) with no taper before the event. The Wednesday session was merged into a combined TSS of 95 for 47 minutes of easy work, which looks inflated. Future days in the week are outlines as required, but the response provides little concrete detail beyond today's run. Hard gates failed: block 1 is unchanged.

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Gym Strength B session focusing on safe hip-hinge progression and single-leg
stability:\n\nWarm-up (5-10 min): Light rowing or treadmill walk + dynamic stretches\n\nMain workout:\n1.
Elevated knee-height rack pulls or trap-bar pulls: 3 sets × 8-10 reps\n   - Start with empty bar or light
weight (20-30 kg)\n   - Focus on flat-back hip hinge mechanics, neutral spine throughout\n   - Rest 90-120
seconds between sets, let HR drop below 110 bpm\n\n2. Bodyweight split squats: 2 sets × 8-10 reps per leg\n
- Controlled descent, keep torso upright\n   - Rest 90 seconds between sets\n\n3. Seated cable rows: 3 sets
× 10-12 reps\n   - Moderate weight, full scapular retraction at end of each rep\n\n4. Dumbbell overhead
press: 3 sets × 8-10 reps\n   - Start light (6-8 kg per dumbbell)\n\n5. Side plank: 2 sets × 30 seconds per
side\n\nCool-down: Light stretching + 8-minute hip/spine mobility circuit\n\nKey focus: Take full rest
periods and prioritize perfect form on the elevated pulls to rebuild your hip hinge safely without straining
your lower back.",
    "optional": false,
    "optionalRationale": "This Gym Strength B session directly builds the posterior-chain strength and hip-
hinge mechanics you need to eliminate lower-back pain during long climbs and carpentry work. The elevated
rack pulls safely teach the hip hinge pattern without the injury risk of floor deadlifts, while split squats
develop the single-leg stability essential for efficient pedaling and running economy. Skipping this session
would delay your progression toward pain-free cycling posture and leave a significant gap in your balanced
strength foundation."

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority—
cadence above 85 rpm from the first minute of every ride—carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race in
February.",

reflection/beam-1.0-501b-a23b

9.7/12.5

Reflection: Beam 1.0 501B A23B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A	B	86.0 s	$0.0530	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00613	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate returns the correct today object with the right date, planned status, workout type, moderate intensity, 45 minutes, indoor flag false and FTP 220 W, matching the plan's Friday Gym Strength B. The exercise list is specific with sets, reps, rest and a heart-rate ceiling, and it respects the plan's elevated pull and split squat limits, though it adds incline push-ups or bench press and dead bugs that the plan did not specify and the dumbbell bench option is not confirmed as available. The rationale ties the hinge and core work to back health and saddle pressure, but it does not state the week's target load or the cost of skipping in the detail the plan asked for, and the description omits explicit load progression guidance for the pulls and split squats. Season revision: The season is rebuilt well around Atlas on 28 February 2027, with a post-Atlas recovery block, a brevet block, a PBP build and taper, and the blocks tile contiguously through 2027-08-15 with block 1 still starting 2026-10-21. The weakness is that the current block is barely changed: its name and focus are unchanged, its rationale never names Atlas, and every week target load, including the Week 2 and Week 3 loads, is carried over from the old plan. Today's run and the completed-session summaries are grounded in the supplied activities, but the optional flag on today's run is debatable given the week's stated aerobic purpose.

elorian/glimpse

9.7/12.5

Elorian: Glimpse

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	C	137.1 s	$0.1266	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00683	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.6/3 · Rationale 1.4/2 · Grounding 1.3/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate returns clean JSON with only the today object, and the date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 30 TSS, 220 W FTP and null bikeWorkout all match the plan. The exercise selection follows the block (elevated pulls replacing floor deadlifts, two split-squat sets, glute bridges, Pallof press, plank) and the rest and heart-rate-recovery cue reflects the coach feedback. Weaknesses: the pull load of about 40 to 50 kg is an unstated assumption, there is no RPE or rep-in-reserve guidance, and the rationale slightly overstates that floor deadlifts injured the back, which the athlete did not claim. Season revision: The response names Atlas in the season goal, block 3 and the week rationale, keeps block 1 starting on 2026-10-21, tiles the season blocks correctly, and leaves tomorrow, nextWeek and nextBlock null, with a valid eight-key contract. Block 1's weeks are copied unchanged from the supplied plan and only its rationale is reworded, so the requirement to genuinely change block 1 is weakly met. The season rationale promises short 5-7 week blocks with a deload every fourth week, yet blocks 4 to 6 run 5, 12 and 9 weeks with no deloads, and the plan runs about ten months of continuous disciplined training despite the athlete's stated four-month limit. The Wednesday past sessions were merged and retitled, and the Morocco reference and the 29 August season end are assumptions not found in the input. Hard gates failed: block 1 is unchanged.

    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B (45 min, moderate). Warm-up: 5 min easy bike or brisk walk plus cat-cow
and hip circles. Main work: (1) Elevated knee-height rack/trap-bar pulls — 3 sets × 8 reps at light load
(~40–50 kg), flat-back hip hinge, 90–120 s rest between sets until heart rate drops below 110 bpm; (2)
Bodyweight split squats — 2 sets × 8–10 reps per leg, slow controlled tempo; (3) Glute bridges — 3 sets ×
12; (4) Pallof press — 3 sets × 10 per side; (5) Plank — 3 × 30 s. Finish with your daily 8-minute hip/spine
mobility circuit (couch stretch, standing forward fold, 90/90 hip rotations, deep squat hold, supine figure-
4, cat-cow). Keep every lift controlled and stop a set if the lower back rounds or flares; the elevated
pulls deliberately replace floor deadlifts while your hinge rebuilds.",
    "optional": false,
    "optionalRationale": "This is the week's second strength stimulus and the session where the safe hip
hinge is rebuilt: elevated knee-height pulls load the posterior chain without the floor deadlift position
that has injured your back, building the hinge and core stability that keep your back pain-free on long
climbs and crouching and support a more stable, less sit-bone-loaded cycling posture. The two split-squat
sets maintain single-leg strength without re-spiking the quad burn from Tuesday's goblet squats, and the
glute bridge, Pallof press and plank work add hip stability and anti-rotation core strength. Together with
Tuesday's session this forms the strength base for your fat-loss goal (muscle retention) and the hinge
progression Week 2 builds on. Skipping today would leave the hinge pattern unpracticed for another week,
slow your back and hip durability, and remove part of the metabolic support for steady fat loss."
  }
}
```

SEASON REVISION

```
{
  "season": {
    "goal": "Finish the Atlas Mountain Race on 2026-02-28, then complete the 200 km randonneur brevet in
April, and finish Paris-Brest-Paris in August 2027, building durable aerobic endurance, efficient cadence
and supporting strength along the way.",
    "rationale": "The season now targets three events in sequence: the Atlas Mountain Race on 28 February
2027 as the first peak, the 200 km brevet in April as the next milestone, and Paris-Brest-Paris in August as
the finale. The shape stays aerobic-first because your recent training shows the base responds well to
controlled, low-fatigue work, while the three-hour race at 187 bpm average HR and the extra pole-vaulting
load show that uncontrolled intensity is the main risk to consistency. Because you have only been able to
sustain disciplined training for about four months, the plan is built in short 5-7 week blocks with a deload
every fourth week and moderate weekly loads, so consistency is protected over volume. The first block builds
the aerobic and strength foundation; the winter block adds cross-training durability with skiing and easy
running; the build block progresses sustained power, long riding and fueling into the Atlas race; a short
recovery-and-brevet block bridges to the April 200 km; the brevet-series block expands endurance through the
spring randonneur events; and the final block peaks long-duration endurance and tapers into PBP.
Assumptions: the 200 km brevet falls in early April and PBP in late August, so the season ends 2027-08-29.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block remains the aerobic and strength foundation for the Atlas Mountain Race on 28
February, the first target of the season. Week 1's realized load of roughly 587 TSS, including the three-
hour race, was far above the intended recovery, so Week 2 stays a conservative low-fatigue rebuild with
every aerobic session capped under 140 bpm and cadence above 85 rpm from the first minute. Your 'Feels good'
feedback for this week confirms the load is being absorbed, so Week 3 can introduce a single controlled
threshold stimulus while keeping volume moderate. Strength stays low-load and logged separately so leg load
is visible, and missed minutes are never made up. The 225 W FTP baseline is retained because no fresh
threshold test or sustained power evidence justifies a change, and the small projected gains in Weeks 5-7
reflect only consistent completed aerobic work. Keeping the progression deliberately slow also respects your
four-month discipline limit: the block is shaped to be repeatable rather than maximal.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh - the
first step of the build toward the Atlas Mountain Race on 28 February. The 30-minute run keeps running-
specific durability alive at minimal cost, and the week's remaining priority, cadence above 85 rpm from the
first minute of every ride, carries into next week, because repeatable efficiency at low intensity is what
carries you through long days in Morocco and, later, PBP.",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus, the first
step of the build toward the Atlas Mountain Race on 28 February. Thirty easy minutes maintains the running-
specific durability that supports your cycling base through the winter and costs almost nothing in fatigue
the day after a 2 h 05 min hike. It stays indoors because rain and strong gusts are forecast all day, and
the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "Skipping this run costs little: the week's aerobic base is already secured by the
hike, the rowing-run double and both strength sessions, and the 25 TSS here is a small durability add-on
rather than a training stimulus. If your legs feel heavy from Saturday's hike or the day gets busy, resting
instead keeps you fresh for Week 3's threshold session, which is the session that actually moves the Atlas
Mountain Race preparation forward.",

openai/gpt-5.3-codex

9.7/12.5

OpenAI: GPT-5.3-Codex

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A	C	55.9 s	$0.1310	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00668	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The candidate keeps today's planned moderate 45-minute gym session with the correct date, status, indoor flag, FTP and TSS, and sensibly follows the coach's swaps (knee-height rack pull instead of floor deadlift, two split-squat sets, goblet squat at 12 kg). The exercise list is specific with sets, reps, rest and a reps-in-reserve cue. Weaknesses: the rack pull is given only as light-moderate with no load assumption for an athlete whose pull loads are unknown, and the optional rationale is somewhat generic about appetite and posture benefits rather than tied to the current plan's load target. Season revision: The candidate names Atlas in the season goal, the season blocks and the block 1 rationale, keeps block 1 starting on 2026-10-21, and the season blocks tile contiguously through 2027-08-31 with the Atlas build, taper and PBP phases in a credible order. However, the current block's name, focus, dates and seven weeks are essentially the supplied text, so block 1 is barely changed to accommodate Atlas, and the current week and today's session never mention Atlas or any Atlas-specific preparation. The season end date of 2027-08-31 is an invented assumption, though it is flagged in the rationale, and the 4-month sustainability constraint is addressed only by generic deloads rather than a clear reset plan.

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "45-minute gym session to build back-safe strength, hip stability, and posture durability
for long-distance cycling while supporting fat loss through controlled total load. Warm up 8 minutes (easy
```

```
bike/treadmill + dynamic hip mobility), then: 1) Elevated knee-height rack pull or trap-bar pull 3x6 at
light-moderate load, 2 minutes rest, strict neutral spine; 2) Goblet squat 3x8 at 12 kg, 90-120 seconds
rest, stop each set with 2-3 reps in reserve; 3) Bodyweight split squat 2x8 per side, controlled tempo; 4)
Glute bridge 3x12; 5) Pallof press 3x10 per side; 6) Front plank 3x30 seconds. Keep breathing controlled and
let heart rate drop below ~110 bpm between heavier sets. Finish with your 8-minute hip/spine mobility
routine (couch stretch/low lunge, forward fold progression, 90/90 rotations, deep squat hold, figure-4
stretch, cat-cow). This session is the key strength stimulus of the week for lower-back resilience and
improved cycling position comfort.",
    "optional": false,
    "optionalRationale": "This session directly builds posterior-chain strength, trunk stiffness, and hip
control—the exact qualities you need in this Autumn Re-Entry block to reduce back pain and saddle-pressure
issues before volume grows. It also contributes meaningful load toward this week's target without the
appetite spikes from hard intervals. If you skip it, you lose this week's primary neuromuscular and
structural adaptation for durable long rides, and your progression toward pain-free brevet preparation is
slower."

OpenAI: GPT-5

9.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	B	D	117.3 s	$0.1586	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00620	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.3/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, the date, planned status, 45-minute moderate gym session, indoor flags and estimated TSS and FTP all match the current week plan. The session is well built for this athlete: elevated pulls with a fallback, bodyweight split squats matching the two-set cap, a core circuit, and clear HR-based rest guidance tied to the back and saddle goals. The rationale is specific to the hinge and saddle pressure but does not tie the session to the fat-loss goal or the weekly load target, and the description omits the goblet squat progression that the block calls for. Season revision: The response names Atlas in the season goal and in the block 4 name, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and gives a detailed, mostly coherent current week with a realistic easy run for today. However, the current block's name, focus and rationale never mention Atlas, so the current block is only lightly changed from the supplied version, and the season's Atlas preparation is pushed into later blocks. The season has a fidelity gap: block 4 is labelled two weeks but spans only about ten days, and the season rationale opens with meta-commentary about updated targets. Past-day session titles and descriptions were also rewritten, and the sessions used for today's optional flag are reasonable but not strongly justified.

TODAY PLAN

10.7/12.5

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B — Elevated Hinge + Split Squat + Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Purpose: build a safe hip hinge, posterior-chain endurance, single-leg control, and core stability so your back stays happy on long climbs and your saddle pressure improves. Keep rests long enough that HR drops below 110 bpm between sets.\n\nWarm-up (8–10 min)\n- 5 min easy row, bike, or treadmill walk
```

```
(very easy).\n- Dynamic prep: 2 rounds of 6 dowel hip-hinges (flat back), 10 glute bridges, 6/side hip airplanes or supported single-leg RDL reaches.\n- Movement prep for pulls: 2 light ramp-up sets of 5 from blocks/knee height.\n\n1) Elevated Rack or Trap-Bar Pulls (knee height) — 3 x 5 reps @ RPE 6 (comfortable, perfect form)\n- Tempo 2-1-2 (up-hold-down). Rest 90–120 s, let HR <110 bpm before each set.\n- Brace ribs down, push the floor away, keep the bar close; no back rounding. If trap bar is used, stand tall with neutral spine.\n- If no rack/trap bar available: DB RDL from blocks or mid-shin, 3 x 8 @ RPE 6.\n\n2) Split Squats (bodyweight) — 2 x 8/side @ slow control\n- Tempo 3-1-2, front heel planted, tall torso. Hold a support if balance wobbles. Rest 60–90 s between sides.\n\n3) Core Stability Circuit — 2 rounds (6–7 min total)\n- Side plank 30 s/side (knees down if needed).\n- Dead bug 8/side with slow exhales, low back gently pressed to floor.\n- Rest ~30–45 s between exercises; keep breathing relaxed.\n\nCool-down (3–5 min)\n- Easy walk and two gentle stretches: hip flexor lunge and cat-cow. Then do your separate 8-minute daily hip/spine mobility later today.",
    "optional": false,
    "optionalRationale": "This session reinforces a safe hip hinge and single-leg stability that protect your lower back and improve comfort on long rides and hikes. Skipping it delays rebuilding posterior-chain strength and core control, increasing the risk of back niggles and saddle discomfort when endurance volume grows."
  }
}

  "season": {
    "goal": "Build the aerobic durability, efficiency and strength to complete the Atlas Mountain Race on 2027-02-28, comfortably finish a 200 km brevet in early April 2027, and maintain momentum toward Paris-Brest-Paris in August 2027.",
    "rationale": "Your updated targets add the Atlas Mountain Race ahead of the April 200 km brevet. The season now prioritises sustainable consistency with frequent deloads and a dedicated taper into 2027-02-28, followed by a recovery and a short rebuild toward the April brevet. Because you typically maintain disciplined training for about four months, the plan uses shorter 3–5 week cycles, clear recovery weeks, and a full reset after Atlas so you can stay engaged and progressing. Winter includes skiing and easy running to support aerobic capacity without excessive concurrent load, while cycling keeps the specificity: efficient cadence, steady endurance, back-to-back long rides, climbing work, and fueling/logistics practice. A brief taper before Atlas preserves freshness; a controlled rebuild sets you up for the April 200 km without burnout.",

    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
```

```
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "This is a low-cost durability touch. If you skip it, you give up a small bit of
run-specific resilience, but you'll keep maximum freshness for next week's first controlled threshold ride—
acceptable if you feel residual fatigue from Saturday.",

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 2.2/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, status, workout type, moderate intensity, 45-minute duration, indoor flags and 220 W FTP, and the session is a sensible second gym day with sets, reps, rest and a stop condition for back pain. However, the current week plan calls for three steady goblet squat sets, and the candidate drops goblet squats entirely, which weakens fidelity to the block progression. The rationale is reasonable but generic and does not tie the session to the fat-loss goal or the week's load target, and the description gives little load progression guidance. Season revision: The response names Atlas in the season goal, several block names and rationales, and keeps block 1 starting on 2026-10-21 with a changed focus and week set, and the blocks tile contiguously through the new season end. Weaknesses include the final block being labelled four weeks while spanning only about three and a third weeks, an extended season end date that is only loosely supported, and thin detail for the Atlas-specific build blocks, which contain no sustained-power progression. Today's run is sensibly easy and indoors in the rain, with a clear fallback, but the week's future days are not outlined and the rationales read somewhat generically in places.

aion-labs/aion-3.5

AionLabs: Aion 3.5

9.7/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	D	D	502.8 s	$0.2809	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00663	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.7/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is clean, with the correct date, planned status, moderate workout type, 45 minutes, indoor flags, and the 220 W FTP. The session matches the planned Gym Strength B and follows the coach replies, including the 90 to 120 second rest, the sub-110 bpm recovery goal, and the lat pulldown progression from 40 to 50 kg. Weaknesses: the rack or trap-bar pull load is described only as light-to-moderate with no RPE or rep-in-reserve guidance, and there is no explicit stop condition for lower-back symptoms despite the athlete's back history. The rationale is specific and states what is lost by skipping, though it is somewhat long. Season revision: The response names Atlas throughout the season goal, block focus and rationale, keeps block 1 starting on 2026-10-21, tiles the five later blocks without gaps through 2027-04-04, and correctly leaves tomorrow, nextWeek, nextBlock and bodyMetrics empty or null. Its main weakness is design: the AMR Peak Build runs straight into the race on 28 February with no real pre-race taper, and block 1 is changed only in wording, with its weeks essentially unchanged from the supplied plan. The current week and today's session are coherent and grounded in the logged activities, though the past-session titles were altered and today is marked optional with a fairly thin justification.

    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B (45 min). Warm up 5–8 min easy bike or treadmill walk plus cat-cow and
hip openers. 1) Elevated knee-height rack or trap-bar pulls: 3x8 at a light-to-moderate load, pushing hips
```

```
back with a flat back — take the full 90–120 s rest between sets so your heart rate drops below 110 bpm
before each pull. 2) Bodyweight split squats: 2x10 per leg, slow and controlled, holding support if needed
for balance. 3) Lat pulldown: 3x10, starting at 40 kg and moving to 50 kg only if all reps feel crisp. 4)
Pallof press: 3x10 per side with a pause at full extension. 5) Plank: 3x30 s. Finish with your daily
unrecorded 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session is where you safely rebuild the hip-hinge pattern through the
elevated pulls — the foundation that will protect your easily-injured lower back, let you add load in later
weeks, and eventually support a more aerodynamic, pain-free position on long climbs toward the April 200 km
brevet and PBP 2027. The split squats, lat pulldowns, and core work add the second weekly strength stimulus
that drives fat loss and posture correction. Skipping it stalls the hinge progression at its most delicate
stage and removes one of only two gym sessions in your week, directly slowing the back durability and body-
composition progress this block is built around."
  }
}
```

SEASON REVISION

9.0/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
471.4 s	**$0.2262**	**yes (2 attempts)**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.7/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.3/2

Judgment: The response names Atlas throughout the season goal, block focus and rationale, keeps block 1 starting on 2026-10-21, tiles the five later blocks without gaps through 2027-04-04, and correctly leaves tomorrow, nextWeek, nextBlock and bodyMetrics empty or null. Its main weakness is design: the AMR Peak Build runs straight into the race on 28 February with no real pre-race taper, and block 1 is changed only in wording, with its weeks essentially unchanged from the supplied plan. The current week and today's session are coherent and grounded in the logged activities, though the past-session titles were altered and today is marked optional with a fairly thin justification.

RETURNED JSON

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race starting February 28, 2027 with durable ultra-endurance,
efficient sustained climbing, and self-sufficient multi-day pacing, then recover and finish a 200 km brevet
in early April 2027 as the first step toward Paris-Brest-Paris in August 2027.",
    "rationale": "The Atlas Mountain Race on February 28, 2027 is now your primary goal, and the roughly
four months from today to race day align exactly with the disciplined-training window you have historically
been able to sustain. The plan is therefore built as one focused four-month push with clear block
milestones, deliberate variety through skiing and running in the winter, and a scheduled deload in Week 4 to
give you a mental and physical break before the heavier build. The aerobic base you are establishing now is
the single most important quality for a self-supported multi-day event: it determines how much power you can
hold hour after hour without unraveling. The winter block uses your skiing to build climbing durability
while maintaining cycling specificity, the January-February block peaks you with back-to-back long days and
sustained climbing power, and a short taper delivers you fresh to the start line. After the race, a recovery
block transitions you toward the April 200 km brevet, which serves as both a concrete post-AMR goal and the
first qualification step toward Paris-Brest-Paris in August 2027.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence above 85 rpm, and low-load strength without
stacking fatigue, establishing the endurance foundation the Atlas Mountain Race demands.",
    "rationale": "This block builds the aerobic engine that determines whether you can ride for multiple
consecutive days in the Atlas Mountains in February. Every session is capped below 140 bpm because the
ability to hold a low-effort pace for 10-15 hours a day is the core requirement of ultra-endurance
bikepacking, not raw threshold power. Week 1 delivered roughly 587 TSS due to the unplanned Zwift race and
additional strength activity, so Week 2 stays conservative to absorb that load before Week 3 introduces a
single controlled threshold stimulus. The Week 4 deload gives you a scheduled mental and physical break at
the point where your historical training discipline typically begins to waver, and Weeks 5-7 then rebuild to
a peak aerobic-base load that sets up the winter climbing block. Cadence above 85 rpm from the first minute
of every ride is non-negotiable because efficient pedalling at low intensity is what preserves your legs
across a multi-day event. Strength work stays light and fully logged so it supports tendon and connective-
tissue durability without adding leg fatigue that would compromise the aerobic sessions.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose with every session respecting the 140 bpm
ceiling: two strength sessions, a Wednesday double of 15 minutes rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday that substituted for the planned 90-minute ride.
Fatigue is low and the week closes with a short controlled run rather than a make-up ride, because arriving
fresh at Week 3's first controlled threshold stimulus matters more than recovering missed minutes. The 30-
minute run keeps running-specific durability alive at minimal cost, and the cadence-above-85-rpm priority
carries into next week because repeatable efficiency at low intensity is the foundation for holding a steady
pace across multiple days in the Atlas Mountains in February.",

    "status": "planned",
    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter at
almost no fatigue cost the day after a 2 h 05 min hike. For the Atlas Mountain Race, your body's ability to
handle sustained low-effort work across long days is the core quality, and this run reinforces that
adaptation while keeping you fresh. It stays indoors because rain and strong gusts are forecast all day, and
the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "This session builds the running-specific aerobic durability that supports your
overall endurance base for the Atlas Mountain Race. While the AMR is a cycling event, your general capacity
to absorb low-intensity effort for hours contributes to the multi-day durability you will need. Skipping it
today costs very little: you already completed a solid aerobic week including a 2-hour hike yesterday, and
the primary adaptation this run maintains will be re-stimulated in next week's sessions. If you are tired or
short on time, resting today and arriving fresh for Week 3's threshold introduction is an acceptable
trade.",

9.6/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	A+	23.9 s	$0.00981	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00678	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON matches the required shape, the status is correctly planned since nothing is recorded for today, and the session stays a 45-minute moderate indoor gym workout with bikeWorkout null and FTP 220 W. The exercise selection fits the athlete's back and hip-hinge rehab goals and the Gym Strength B focus, with clear sets, reps, tempo, and rest guidance that respects the coach's heart-rate recovery cue. Weaknesses include the unexplained 40-50 kg rack-pull and 30-40 kg cable-row loads without a stated assumption or progression rule, no RPE or stop condition for back pain, and a rationale that calls the session non-negotiable without tying it to the week's specific load target. Season revision: The output names Atlas in the season, block 3 and rationale, keeps block 1 starting on 2026-10-21, returns null for tomorrow, nextWeek and nextBlock, and leaves bodyMetrics empty, so the mechanical checks pass. The block 1 change is minimal: the weeks are essentially unchanged and the focus only gains a heart-rate and cadence phrase, and the Atlas build is a six-week label with no weekly detail or explicit Atlas taper, since the block ends on race day. The season extends to August without scheduling the four-month reset the athlete said they need, and the rationales include meta-commentary about aligning or replacing the old plan. The candidate also silently changed stored past values, such as rowing TSS from 70 to 10 and the hike duration from 133 to 125 minutes, without basis.

  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027 with durable aerobic endurance and efficient climbing, then finish a 200 km brevet in April 2027 as the first step toward Paris-Brest-Paris in August 2027, while managing training consistency within a 4-month sustainable window.",
    "rationale": "Your updated goal adds the Atlas Mountain Race as the primary early-season target, followed by the 200 km brevet in April and Paris-Brest-Paris in August. The season must therefore peak for a demanding ultra-endurance mountain event in late February, maintain fitness through April’s brevet, and then rebuild for PBP. The 4-month consistency limit means the plan must prioritize sustainable progression, avoid excessive load stacking, and include deliberate deloads to prevent burnout. The aerobic base block remains the foundation, but the winter block now emphasizes mountain-specific endurance and climbing efficiency, while the spring block transitions to brevet-specific pacing and fueling. The taper for Atlas Mountain Race will be shorter and more focused on fatigue management than a traditional peak.",

anthropic/claude-haiku-5.5

9.6/12.5

Anthropic: Claude Haiku 5.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	71.8 s	$0.0129	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00686	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.6/2 · Design 1.8/3 · Rationale 0.3/2 · Grounding 1.7/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON contract, date, planned status, workout type, moderate intensity, 45 minutes, indoor flag, null bikeWorkout, 220 W FTP and 30 TSS all match the current plan. The description is concrete, with exercises, sets, reps, rest, heart-rate gating, stop conditions and an explicit equipment assumption, and it reflects the athlete's lower-back and hinge constraints. However, optionalRationale is left empty for a non-optional workout, so the required explanation of the session's adaptation purpose and the cost of skipping it is missing. Season revision: The season is restructured well: it names Atlas, keeps the 2026-10-21 start, tiles every block through 2027-08-31 with no gaps or overlaps, and adds a four-month-aware reset before the Atlas race and another before the spring build. Block 1 changes only in its name focus and rationale, with the weeks and targetLoad text left as supplied, so the Atlas preparation is not visible in the block's own week structure. The Wednesday session also merges a separate 32-minute run into the rowing entry, which blurs the recorded activity, and the Sunday run is marked optional without a strong reason to skip it.

google/gemini-3.7-flash

9.6/12.5

Google: Gemini 3.7 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	B	40.3 s	$0.0491	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00655	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.6/3 · Rationale 1.4/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate correctly returns only the today object with status planned, a moderate 45-minute gym workout, outdoor false, canBeOutdoor false, a null bikeWorkout and the 220 W FTP, all matching the current plan and the absence of any recorded activity for 2026-10-30. The strength circuit follows the coach replies (knee-height rack pulls, two bodyweight split squat sets, rest until HR drops below 110, hip-hinge cues), though the 8-minute mobility routine as written with six 90-second holds runs to about 9 minutes and the timing does not quite add up to 45 minutes. The rationale ties the session to lower-back protection and cycling posture for brevet riding, but the closing sentences lean slightly generic, and load progression and fallback options for missing equipment are thin. Season revision: The season is cleanly re-tiled from 2026-10-21 through 2027-08-22 with contiguous blocks that name Atlas, keep the April 200 km brevet and Paris-Brest-Paris, and block 1 starts on the required date with the correct JSON shape. However, block 1 itself is barely changed: its name, focus and most weeks are carried over, and Atlas is only alluded to as AMR in its rationale, so the current block does not visibly prepare for Atlas. The current week also silently merges the Wednesday rowing and run into one session and alters the Saturday hike duration, and today's rationale and optional text were rewritten rather than kept as supplied. Nothing in the week is invented, and bodyMetrics is correctly empty.

TODAY PLAN

10.8/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

    "canBeOutdoor": false,
```

```
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Head to the gym for Strength Session B focusing on safe posterior chain hinge mechanics, single-leg stability, upper-body horizontal pulling, and core anti-rotation, followed by your daily mobility circuit.\n\nWarm-up (5 min):\n- 3–5 min easy warm-up on the treadmill or Ski-ERG at a conversational pace\n- Dynamic prep: 10 bodyweight good mornings (hands on hips, soft knees), 10 bodyweight squats, 10 cat-cows\n\nMain Strength Circuit (30–32 min, rest 90–120 seconds between sets until HR drops below 110 bpm):\n1. Elevated Knee-Height Rack Pulls (or elevated Trap-Bar Pulls): 1 warm-up set with empty bar x 8 reps, then 3 sets x 8 reps with light, controlled weight (focus strictly on a neutral spine, pushing hips back, and engaging glutes/lats—do not pull from the floor).\n2. Bodyweight Split Squats: 2 sets x 8 reps per leg (slow 3-second descent, upright torso, keeping load off recovering quads).\n3. Dumbbell Single-Arm Row (supported on bench): 3 sets x 10 reps per side (moderate weight, flat back, pulling elbow toward hip).\n4. Half-Kneeling Cable or Band Pallof Press: 3 sets x 10 reps per side (hold each press for a 2-second pause at full extension to lock in core anti-rotation).\n5. Side Plank Hold: 3 sets x 20–30 seconds per side.\n\nCool-down Mobility Circuit (8 min, hold each stretch for 90 seconds):\n1. Couch stretch or low lunge (hips pushed forward, glute squeezed)\n2. Standing forward fold with soft knees, gradually letting spine hang\n3. 90/90 seated hip rotations on the floor\n4. Deep squat hold with heels down (hold a rack or post for support)\n5. Supine figure-4 glute stretch\n6. Cat-cow spinal waves with slow, coordinated breathing.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength, single-leg pelvic stability, and core anti-rotation necessary to protect your lower back and maintain a pain-free, aerodynamic cycling posture for ultra-distance brevet riding and Paris-Brest-Paris. Skipping it compromises your progressive adaptation to hip-hinging under load, leaving your lumbar spine vulnerable to fatigue and ache on long climbs and weekend endurance sessions."
  }

anthropic/claude-haiku-4.5

9.6/12.5

Anthropic: Claude Haiku 4.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	B	27.7 s	$0.0523	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00672	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.3/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and FTP-consistent values, and matches the Friday gym session outlined in the week plan. The exercise prescription is specific and safety-conscious, with elevated pulls, split squats, Pallof presses and planks, sets and reps, and the coach's 90 to 120 second rest and sub-110 bpm recovery cues carried over. Weaknesses: the 15 to 20 kg starting load is an assumption without a stated basis, there is no stop condition or pain fallback, and the goblet squat progression the week plan emphasized is absent without explanation. Season revision: The season clearly works Atlas in as the February 2027 target with a dedicated preparation block, and the blocks tile through the season end with block 1 correctly starting on 2026-10-21. However, the current block name, focus and rationale never name Atlas, and the season has no real taper before the race since the race date falls on the first day of the post-race block. The season and block rationales are written as commentary on the change (expands the season, remains unchanged) rather than the plan as it stands, and the week's Friday is called off even though a completed strength session is logged for it. Past rest-day status is set to completed rather than rest, and the Week 2 Wednesday session was merged and renamed, which rewrites a completed record.

    "bikeWorkout": null,
```

```
    "description": "Conservative gym strength session focusing on safe elevated hip-hinge mechanics and core
anti-rotation. Warm up with 5 minutes of light movement and mobility. Perform 3 sets of 8–10 knee-height
trap-bar or rack pulls (start light, ~15–20 kg, focusing on a flat back and controlled hip hinge), 2 sets of
8 bodyweight split squats per leg (controlled descent, 90–120 seconds rest between sets), 3 sets of 10
Pallof presses per side (anti-rotation core work), and 3 sets of 30-second planks. Rest 90–120 seconds
between all sets so your heart rate drops below 110 bpm before each lift. Finish with 2–3 minutes of gentle
stretching. Total elapsed time ~45 minutes. Follow with your unrecorded 8-minute evening hip and spine
mobility circuit (couch stretch, forward fold, 90/90 hip rotations, deep squat hold, figure-4 glute stretch,
cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the safe, pain-free hip-hinge mechanics and posterior-chain
resilience your lower back needs for long cycling and climbing. The elevated trap-bar or rack pulls protect
your spine while retraining your glutes and hamstrings to stabilize your pelvis, directly addressing the
sit-bone pressure and lower-back ache you experience on long rides. Skipping this session delays your
ability to adopt a more aerodynamic, forward-folded cycling posture without pain, and leaves your core
vulnerable to fatigue during the 200 km brevet series and Paris-Brest-Paris. The two bodyweight split-squat
sets keep your quads fresh while reinforcing single-leg stability for climbing and pedaling efficiency."

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027, then build toward Paris-Brest-Paris in
August 2027, with a 200 km brevet in April as a stepping stone. Maintain disciplined training for the full
6-month cycle by building aerobic durability, efficient cadence, climbing strength, and pacing discipline.",
    "rationale": "Your new goal expands the season to include the Atlas Mountain Race as the primary
February target, followed by Paris-Brest-Paris in August. The 200 km brevet in April becomes a mid-season
checkpoint rather than the final goal. This requires a longer, more structured progression: a solid aerobic
base through December, a winter build with climbing-specific work and threshold power, a sustained-power
phase through January and early February to prepare for the Atlas race, then a brief recovery and rebuild
for the April brevet, and finally a long endurance-specific block for Paris-Brest-Paris. Your note that
disciplined training has lasted a maximum of 4 months means we must build in strategic deloads, variety
through skiing and running, and clear milestone events to maintain motivation. The season runs from 21
October 2026 through 31 August 2027 to give you a full 10.5-month cycle with built-in recovery and
progression.",

    "rationale": "The block remains 7 weeks (21 October to 6 December) and emphasizes aerobic consistency,
cadence discipline, and low-load strength before introducing threshold work. Week 1 (19–25 October)
delivered approximately 587 TSS including an unplanned three-hour race and pole-vaulting session, well above
the intended recovery load, so Week 2 (26 October–1 November) is deliberately conservative: approximately
180–220 TSS with strict heart-rate and cadence control, no make-up sessions, and Friday off. Week 3
introduces one controlled threshold stimulus only if Week 2 shows stable aerobic execution. Week 4 is a
planned deload. Weeks 5–7 rebuild volume progressively toward 6–7.5 hours per week while maintaining cadence
above 85 rpm from the first minute of every ride and keeping strength work logged separately to avoid
stacking leg load. The 225 W FTP baseline is retained because no fresh threshold test or sustained power
evidence justifies a change.",

cadence-specific cycling that was originally planned. Tuesday and Friday strength sessions were completed as
moderate-effort work; Wednesday combined 15 minutes of rowing plus a 32-minute easy run; Thursday's planned
trainer ride was missed; Saturday's 2 h 05 min hike at 114 bpm average substituted for the planned 90-minute
trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low. Missed minutes are
not recovered, and today's 30-minute easy run keeps running-specific durability alive at minimal cost before
Week 3's first controlled threshold stimulus. The week's remaining priority—cadence above 85 rpm from the
first minute of every ride—carries into next week, because repeatable efficiency at low intensity is what
carries you through 200 km in April and 1200 km in August.",

meta/muse-spark-1.3

Meta: Muse Spark 1.3

9.6/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	B	40.2 s	$0.0715	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00638	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.5/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The response is valid JSON with the requested today object, correct date, planned status, workout/moderate type and 45-minute duration matching the week plan, and it stays out of the weekend and rest-day logic. The session sensibly reuses the prescribed hinge, split squat, pulldown, Pallof and mobility work while respecting the heart-rate and back-safety constraints from the coach notes, though it lightly restructures the planned Gym Strength B and introduces a dead-bug and an unsupported 8-minute mobility circuit reference. The rationale ties the session to the back and hip goals and fat loss, but it does not quantify the load target or explicitly note the lost aerobic stimulus, and the description lacks explicit load progression guidance for the pulldown and rack pull. Season revision: The response is valid JSON with the eight required keys, tiles the season cleanly from 2026-10-21 through 2027-08-22, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek, nextBlock and bodyMetrics correctly null or empty, and names Atlas in the season goal and block 1 rationale. However, block 1 is almost unchanged from the supplied version (same weeks, targetLoads and focus, with only a few FTP values and rationale text altered), and Atlas appears only as a passing phrase in the week and today rationales rather than as concrete preparation. The season also ignores the athlete's stated four-month ceiling for disciplined training, running continuously from October to August, and the Atlas block ends on race day with no real taper before it. Today's session and the week's outline are sensible and grounded in the supplied data, but the detail on Atlas-specific work is thin.

TODAY PLAN

10.7/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "You build the back-safe hinge and single-leg stability you need for a pain-free cycling
position and steady fat loss. Warm up 5 min easy on bike or rower, then do: 1) Elevated rack pull or trap-
bar pull from knee-height blocks 3x8 light, flat back, hips back, rest 120 sec until your HR is below 110
bpm, 2) Bodyweight split squat 2x8/leg, torso tall, rest 90-120 sec, 3) Lat pulldown 3x10 at 30-40-45 kg,
rest 90 sec, 4) Pallof press 2x10/side, 5) Dead-bug 2x8/side with slow breathing. Keep all sets easy-
moderate, stop a set if your lower back rounds or aches, and do not add floor deadlifts, good mornings or
heavy squats. Finish with your unrecorded 8-minute hip/spine circuit: couch stretch, standing forward fold
with soft knees, 90/90 hip rotations, deep squat hold, supine figure-4, cat-cow, ~90 sec each.",
    "optional": false,
    "optionalRationale": "This session builds the elevated hip-hinge strength, glute activation and anti-
rotation core stability that lets you ride lower without sit-bone overload and back ache on long climbs and
carries you toward your 15% fat and Paris-Brest-Paris durability goal. If you skip it you lose this week's
only safe hinge stimulus and your back and hips stay fragile for Saturday's hike and Sunday's ride."

mistralai/mistral-medium-3-5

9.6/12.5

Mistral: Mistral Medium 3.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
D	A+	B	23.2 s	$0.0743	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00638	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid with the exact today shape, the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flag and FTP 220 W, matching the current plan's Friday Gym Strength B. The session follows the plan's elevated rack pulls and two split-squat sets and gives rest and heart-rate guidance, but it lacks a 12 kg goblet squat or explicit load progression and the rest-between-sets cue is partly generic. The description is concise and grounded in the athlete's back and hip issues, though the rationale does not explicitly mention the Week 1 fat-loss and evening-hunger angle that the plan emphasises. Season revision: The response names Atlas in the season goal, the season rationale, the block 1 rationale and the new Atlas Mountain Race Preparation block, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null with the correct top-level keys. Block 1 is only weakly changed: its name, focus, dates and all seven week rows are identical to the supplied plan, and only the rationale was rewritten, so the Atlas-driven revision is thin in the detailed block. The season also runs about ten months of continuous plan past the athlete's stated four-month sustainable window with only a brief reference to deloads, and the final PBP taper block spans 51 days while labelled as seven weeks. Today's session is handled properly with an unchanged planned description and a coherent week, but the rowing session's TSS was raised to 70 without support from the input.

TODAY PLAN

the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": false,
    "optionalRationale": "Skipping this would forfeit the minimal but valuable running-specific durability
that complements your cycling base, and the cost in fatigue is negligible.",

inclusionai/ling-3.0-flash

9.5/12.5

inclusionAI: Ling 3.0 Flash

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	B	A+	160.9 s	$0.00394	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00661	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.3/2 · Design 1.8/3 · Rationale 1.2/2 · Grounding 1.3/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean and matches the requested today shape, with the correct date, planned status, moderate 45-minute indoor gym workout, 220 W FTP, and 30 TSS consistent with the plan. The session is well built: rack pulls, 12 kg goblet squats, two split-squat sets, bridges, Pallof presses and planks follow the week's progression and the athlete's exercise-specific feedback, with sensible rest periods and cues. Weaknesses are a lack of load progression rules, pain stop conditions or fallbacks, and a rationale that is solid but leans somewhat on generic benefit wording. Season revision: The season is genuinely re-planned around Atlas on 28 February 2027, with PBP and the April brevet kept, block 1 still starts on 2026-10-21, and the next week, next block and tomorrow are correctly null. Block 1 is only lightly changed: its weeks are carried over, and the block rationale opens by saying the name, focus and structure remain unchanged, which is meta-commentary about the revision. The week rationale claims a total of about 180-220 TSS while the listed sessions sum to roughly 260, and the season ends on 23 August 2027, which may cut off PBP. Today's session is kept as supplied, but it is labelled optional without a strong case, and the response adds coachQuestion and modelsRemarks beyond the eight requested top-level keys.

OpenAI: GPT-6 Luna

9.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	A	A+	59.9 s	$0.00670	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00634	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.5/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean, contains only the requested today object, and matches the planned 45-minute moderate indoor gym session dated 2026-10-30 with bikeWorkout null, FTP 220 and a sensible TSS. The exercise list is specific with sets, reps, rest and a stop rule for the hinge, and split squats are capped at two sets as the week plan requires. Weaknesses: loads for the lat pulldowns and rack pulls are left vague despite the athlete's logged 50 kg pulldown, and the description does not restate the daily mobility circuit, though the rationale is specific to the hinge and back goals. Season revision: The response names Atlas in the season goal, the block 3 focus and the rationale, keeps block 1 starting on 2026-10-21, tiles the season contiguously to 2027-04-04, and leaves tomorrow, nextWeek and nextBlock null with an empty bodyMetrics array, which is correct. Its main weakness is design: the Endurance build block ends on 2027-02-28, the Atlas race day itself, so there is no taper or recovery before Atlas, and the athlete's four-month ceiling is acknowledged in the rationale but never built into the season as a reset point. Paris-Brest-Paris appears only as a long-term note, and blocks 2 to 5 are thin, while the current block's later weeks (4 to 7) are essentially unchanged from the supplied plan despite the new goal. Week 2 and today's session are coherent and grounded in the activity data, but the Oct 28 run and row were merged into one session with a combined TSS that is not clearly separated from the recorded data.

```

```
    "bikeWorkout": null,
    "description": "Complete a controlled 45-minute gym session: 5 minutes of easy warm-up, then elevated knee-height rack pulls 2×8 with a very light load and a flat back; bodyweight split squats 2×8 per side; glute bridges 3×12; lat pulldowns 3×10 at a comfortable load; Pallof presses 3×10 per side; and planks 3×30 seconds. Rest 90–120 seconds between sets, letting your heart rate settle below 110 bpm before each set. Keep every repetition smooth and pain-free; stop the hinge if you cannot maintain your back position. This conservative strength work supports your hip and trunk resilience while your legs and back readapt.",
    "optional": false,
    "optionalRationale": "This session builds safe hip-hinge control and trunk stability for long climbs and sustained bike posture, supporting your Paris-Brest-Paris durability goal and this block’s focus on back-resilient strength. It also contributes purposeful strength work to the week’s 5.0–5.5-hour target. Skipping it would forfeit a low-risk opportunity to progress the hinge pattern and core endurance you need for long rides without relying on heavy lifting."
  }
}

Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.5/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.2/2

Judgment: The response names Atlas in the season goal, the block 3 focus and the rationale, keeps block 1 starting on 2026-10-21, tiles the season contiguously to 2027-04-04, and leaves tomorrow, nextWeek and nextBlock null with an empty bodyMetrics array, which is correct. Its main weakness is design: the Endurance build block ends on 2027-02-28, the Atlas race day itself, so there is no taper or recovery before Atlas, and the athlete's four-month ceiling is acknowledged in the rationale but never built into the season as a reset point. Paris-Brest-Paris appears only as a long-term note, and blocks 2 to 5 are thin, while the current block's later weeks (4 to 7) are essentially unchanged from the supplied plan despite the new goal. Week 2 and today's session are coherent and grounded in the activity data, but the Oct 28 run and row were merged into one session with a combined TSS that is not clearly separated from the recorded data.

{
  "season": {
    "goal": "Prepare for the Atlas Mountain Race on 2027-02-28, then the first 200 km randonneur brevet in April 2027, while building a durable foundation for Paris-Brest-Paris in August 2027.",
    "rationale": "The season through 2027-04-04 builds toward the Atlas Mountain Race and the first April brevet; Paris-Brest-Paris remains the longer-term direction beyond this season. Your history of sustaining disciplined training for four months or less makes repeatable training, regular recovery, and conservative load progression central to the plan. Recent controlled aerobic work and your report that you feel good support a gradual build, while the earlier three-hour race and extra leg load reinforce the need to avoid stacking hard efforts. The plan develops cycling durability and cadence first, maintains fitness through winter cross-training, then adds race-specific endurance and fueling practice before a taper.",

deepseek/deepseek-v3.2-exp

9.5/12.5

DeepSeek: DeepSeek V3.2 Exp

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	B	A+	165.9 s	$0.00867	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00668	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.7/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.2/2

Combined judgment: Today plan: The response is clean valid JSON with the requested today object, correct date, planned status, 45-minute moderate gym workout, indoor and no bikeWorkout flags, and an FTP of 220 W consistent with the plan. The exercise list (elevated rack pulls, split squats at 2 sets, single-arm row, Pallof press, glute bridge) fits the block's hinge and core focus and the coach's Friday notes, with rest and heart-rate cues. Weaknesses are the lack of load progression or RPE guidance, no fallback for missing equipment or pain, and the rationale leans on generic phrases like aerodynamic position rather than specific current-week targets. Season revision: The response names Atlas throughout, keeps block 1 starting on 2026-10-21, returns exactly seven week sessions with a matching today object, and leaves tomorrow, nextWeek and nextBlock null as required. The main design flaw is that the Atlas taper is placed after the race: block 2 ends on 2027-02-27 with no pre-race taper, and the block labelled Taper and Execution starts on race day 2027-02-28, so the race is not properly prepared for. Block 1 is also barely changed beyond its rationale and some load wording, and the rationale text includes meta-commentary such as the block structure is adjusted and the week successfully delivered, while the athlete's four-month training ceiling is only mentioned rather than built into a reset.

minimax/minimax-m2.5

MiniMax: MiniMax M2.5

9.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	273.8 s	$0.0255	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00646	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.5/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate returns a clean today object that matches the planned Friday gym session on 2026-10-30 in date, status, type, intensity, duration, TSS, FTP and indoor flags, with a sensible progression of hinge, unilateral leg, row, anti-extension and side-plank work that respects the earlier back and quad feedback. Its weaknesses are that the prescription is somewhat generic for an athlete who asked for very specific strength targets, the load for the rack pulls is only loosely defined, and the claim that split-squat imbalances drive sit-bone discomfort is speculative rather than grounded in the input. The rationale is specific and states the concrete cost of skipping, though it leans on some broad claims about posterior-chain resilience. Season revision: The response keeps the valid eight-key contract, starts block 1 on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and names Atlas in the season goal, season rationale and block rationale. The season blocks tile correctly through 2027-08-19. However, the season misplaces the race: the Atlas-Specific block ends on 2027-02-21 and the Post-Atlas Recovery block starts 2027-02-22, so the 28 February Atlas race falls inside the recovery block. Block 1 weeks, the week sessions and today's session are essentially unchanged from the supplied plan, with only the rationale text reworded, so the block shows little Atlas-specific preparation. The later blocks are name-and-focus stubs with no concrete targets beyond the first block's weeks. Hard gates failed: block 1 is unchanged.

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B — 45 min. Warm-up: 5 min easy bike or row at conversational pace, then
dynamic hip and spine mobility (leg swings, hip circles, cat-cow). Main session: (1) Elevated knee-height
rack pulls or trap-bar pulls — 3 sets of 10–12 reps at a light load (start with just the bar or ~20 kg),
focusing on a flat-back hip hinge, neutral spine, and driving through the heels; rest a full 90–120 s
between sets so heart rate drops below 110 bpm. (2) Bodyweight Bulgarian split squats — 2 sets of 10/side,
holding onto a rack for balance if needed; rest 60–90 s. (3) Single-arm dumbbell row — 3 sets of 10/side at
a moderate weight (12–16 kg); rest 60–90 s. (4) Dead bug — 3 sets of 10/side, moving slowly with a full
exhale on the extension and keeping the lower back pressed into the floor; rest 45–60 s. (5) Side plank — 2
sets of 20–30 s/side. Finish with your daily 8-minute hip and spine mobility circuit (couch stretch,
standing forward fold, 90/90 hip rotations, deep squat hold, supine figure-4, cat-cow).",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and unilateral leg strength you
need to hold a more aerodynamic, pain-free cycling position on long rides and to climb out of the saddle
without lower-back fatigue. The elevated rack pulls safely retrain your hip hinge pattern after the
detraining break, protecting your back while rebuilding the strength required for centuries and the 1200 km
Paris-Brest-Paris in August 2027. The Bulgarian split squats address the left-right imbalances that
contribute to your sit-bone discomfort on long rides, and the anti-extension and lateral core work directly
stabilizes your spine under fatigue. Skipping it would leave your hip hinge untrained for another week,
delay the safe progression to heavier pulling work, and compromise the core stability that keeps your back
ache-free on long climbs — directly undermining your second goal of a pain-free cycling posture and your
third goal of long rides at a decent pace."
  }

openai/gpt-5.1

9.5/12.5

OpenAI: GPT-5.1

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	27.7 s	$0.0767	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00658	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 1.2/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The response is clean JSON with only the requested today object, and it correctly keeps today as a planned indoor 45-minute moderate gym workout with the planned TSS, FTP and indoor flags. The session follows the block's hinge progression, with knee-height pulls, two bodyweight split-squat sets and a core circuit, and its heart-rate and rest cues reflect the athlete's feedback. Weaknesses: the warm-up includes bodyweight good mornings even though the athlete has said they cannot go straight to good mornings without injury, no starting loads are given for the pulls or lat pulldown, and the lat pulldown and dead bug are not clearly tied to the plan's stated exercises. Season revision: The response names Atlas in the season goal and rationale, keeps block 1 starting on 2026-10-21, and genuinely revises block 1 focus, rationale and weekly targets, with a valid eight-key contract and tomorrow, nextWeek and nextBlock correctly null. However, the season was barely re-planned: blocks 2 to 5 are essentially unchanged, the season still ends on 2027-04-04, Paris-Brest-Paris in August 2027 is absent from the timeline, and the Atlas race on 28 February 2027 sits at the end of block 3 with the brevet taper placed after it, which is chronologically incoherent. The current week and today's run are well grounded in the supplied activities and forecast, with sensible week-level load, though the Wednesday rowing and run were merged into one session and today's rationale is only loosely connected to the new Atlas goal.

```

```
    "bikeWorkout": null,
    "description": "Gym Strength B session focused on a safe hip hinge pattern, single-leg stability, and
core strength to support long rides and protect your back.\n\nWarm-up – 8–10 minutes\n- 5 minutes easy
cardio (bike, treadmill walk, or stair machine) keeping HR <120 bpm.\n- Dynamic mobility: 1 set each of 10
bodyweight good-mornings, 10 reverse lunges per leg, 10 hip circles per direction, 10 cat-cows.\n\nA.
Elevated Rack/Trap-Bar Pulls (Hip Hinge) – 3 x 8\n- Set bar or trap bar so the weights sit around knee
height.\n- Choose a light load that feels easy-moderate (no back strain).\n- 3 sets of 8 controlled reps.\n-
Focus: flat back, push hips back, bar stays close to legs, drive through heels to stand.\n- Rest 90–120
seconds between sets; let HR drop <110 bpm before each new set.\n\nB. Bodyweight Split Squats – 2 x 8–10 per
leg\n- Stand in a split stance, rear foot on the floor (not elevated).\n- Lower under control, keep front
knee tracking over mid-foot, torso tall.\n- 2 sets of 8–10 reps per leg at bodyweight only.\n- Rest ~60–90
seconds between sets.\n\nC. Lat Pulldown – 3 x 10\n- Use a weight that is controlled but challenging by reps
8–10.\n- 3 sets of 10 reps, 60–90 seconds rest.\n- Focus on squeezing shoulder blades down and back; do not
lean too far back.\n\nD. Core Circuit – 2 rounds\nPerform as a circuit with ~30–45 seconds rest between
exercises and 60 seconds between rounds.\n1) Pallof Press – 10 reps per side\n   - Light-moderate cable or
band; resist rotation, tall posture.\n2) Front Plank – 30 seconds\n   - Neutral spine, glutes lightly
engaged, avoid sagging.\n3) Dead Bug – 8–10 controlled reps per side\n   - Lower opposite arm/leg while
keeping low back lightly pressed into the floor.\n\nCool-down & Mobility – 5–8 minutes\n- Easy walk or very
light bike 2–3 minutes.\n- Then your 8-minute hip/spine mobility circuit: couch stretch/low lunge, standing
forward fold with soft knees, 90/90 hip rotations, deep squat hold, supine figure-4 glute stretch, and cat-
cow.\n\nKeep all sets technically crisp and stop immediately if you feel any sharp pain in your back or
hips. It is better to err on the side of lighter loads and perfect form than to chase weight.",
    "optional": false,
    "optionalRationale": "This session is a key piece of your Autumn Re-Entry block: it builds the hip-hinge
strength, single-leg stability, and core control that let you sit in a lower, more comfortable position on
the bike without back pain or overloaded sit bones. Skipping it would slow your progress toward a stronger,
more resilient back and hips, which are crucial for long climbs and multi-day rides like PBP and for
tolerating higher cycling and running volume later in the season."
  }
}
```

SEASON REVISION

8.1/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
18.7 s	**$0.0504**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.0/2 · Design 1.2/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

RETURNED JSON

```
{
  "season": {
    "goal": "Build sustainable long-distance cycling fitness for the Atlas Mountain Race on 28 February
2027, a full brevet series including a 200 km in April 2027, and Paris-Brest-Paris in August 2027, while
keeping the training structure realistic enough that you can maintain disciplined progress longer than your
usual 3–4 month window.",
    "rationale": "Your primary targets now extend beyond the April 200 km brevet to the Atlas Mountain Race
in late February 2027 and Paris-Brest-Paris in August 2027, with the brevet series in between. This demands
not only the aerobic base to complete a 200 km ride but also multi-day durability, off-road capable
strength, and a training structure you can sustain for more than the 3–4 months you have historically
managed. The season from 2026-10-21 to 2027-04-04 therefore serves as phase one of a longer ultra-cycling
journey: it prioritises consistent, low-fatigue aerobic development, efficient cadence on the bike, and
basic strength that will later support tougher terrain and back-to-back days. Skiing and running stay in as
supportive, low-impact tools to keep you mentally fresh and physically resilient through the winter without
overloading cycling. Volume and intensity are progressed conservatively so you arrive at the April 200 km
with a solid base and the motivation to continue building toward Atlas Mountain Race and Paris-Brest-Paris
rather than peaking early or burning out.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue so
you can sustain training consistency into 2027’s ultra and brevet goals.",
    "rationale": "This block establishes the aerobic and strength foundation for Atlas Mountain Race, your
brevet series, and Paris-Brest-Paris while deliberately keeping fatigue controlled so you can stay
consistent for more than your usual 3–4 months. The recent three-hour Zwift race at very high heart rate,
plus pole vaulting and strength work, showed you can accumulate a lot of load quickly, so the block now
emphasises strict aerobic control, cadence above 85 rpm on flat indoor rides, and clear separation of
strength from endurance. Week 1 absorbed the unexpected race load, Week 2 focused on low-fatigue aerobic
rebuild, and Week 3 now introduces only a single controlled threshold session alongside mostly easy riding
and one strength session. A deload in Week 4 preserves freshness and motivation, and Weeks 5–7 gradually
increase endurance volume and introduce modest tempo without compromising recovery. Keeping intensity
modest, volume progressive, and workouts clearly purposeful builds the durability and habits you need for
ultra-distance while avoiding the boom–bust pattern that has limited you in past training blocks.",

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control to recover from the
recent race load while keeping consistency before adding threshold work.",
    "rationale": "This week rebuilds steady aerobic work without accumulating fatigue, so you stay
consistent heading into a more structured Week 3. You have already logged two strength sessions, one rowing
session, one short easy run, and a 2 h hike, all with heart rate under 140 bpm, which fits the goal of
controlled, low-stress training after the very hard three-hour Zwift race. Thursday’s trainer ride remained
missed on purpose rather than being made up, protecting freshness. Today’s short easy run keeps running
durability alive at minimal cost and rounds out the week toward about 5–6 hours total. The weekly structure
supports your long-distance goals by consolidating base fitness without overreaching, an important step
toward breaking your past pattern of only sustaining disciplined training for a few months.",

9.5/12.5

OpenAI: GPT-5.1-Codex-Max

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	C	37.9 s	$0.1008	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00655	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate enum values, 45 minutes, indoor flag, 220 W FTP, 30 TSS and a null bikeWorkout, all matching the current plan for the gym day. The session is well chosen for the hinge and core goals, with knee-height pulls, split squats capped at two sets, bridges, pulldowns, Pallof presses and planks, and it reuses the coach's 90 to 120 second rest and below 110 bpm guidance. Weaknesses are that the pull load is left as light and unquantified, there is no RPE or rep-in-reserve guidance, and the rationale is somewhat generic about fat loss and back resilience rather than tying to the specific week's load target. Season revision: The season correctly names Atlas on 28 February 2027, places it in a dedicated peak and taper block ending on that date, keeps PBP in August 2027, and tiles all blocks contiguously with block 1 still starting on 2026-10-21. The current block is weakly revised: its name, focus, dates and seven weeks are essentially the supplied ones, with mainly the rationale rewritten, so the Atlas change is thin inside the block itself. The season rationale uses meta phrasing such as the season now spans, and the post-Atlas blocks are generic with little Atlas-specific preparation, though today's rationale does tie the run to Atlas and the spring brevet. The current week and today are coherent, dated correctly, and grounded in the logged sessions, but the 4-month sustainability limit is only addressed by claimed deloads rather than a concrete structure. Hard gates failed: block 1 is unchanged.

openai/gpt-5.4

OpenAI: GPT-5.4

9.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	C	37.9 s	$0.1209	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00612	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.0/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid with the requested today object, correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and a null bikeWorkout, matching the planned Friday gym session. The exercise prescription is specific with sets, reps, rest, RPE-style reserve, and a back-pain fallback, and it stays within the athlete's gym and back constraints. Weaknesses: the warm-up is a treadmill or spin option that adds time not clearly budgeted, the 45-minute total is not checked against the listed blocks, and the rationale is somewhat generic about cycling position without tying the lift count to this week's target load. The estimated FTP of 220 W and TSS of 30 are consistent with the plan. Season revision: The response names Atlas in the season goal, the new third block and the block rationale, keeps block 1 starting on 2026-10-21, and returns valid JSON with seven week sessions and null tomorrow, nextWeek and nextBlock. Its main weakness is that the season ends on 2027-04-04 and never schedules Paris-Brest-Paris in August 2027, so the requested long-term goal is only mentioned in prose. Block 1's weeks and focus are left essentially unchanged, so the change to the current block is limited to a rewritten rationale. The week and today sessions are grounded in the logged activities, but the candidate also changed a completed rowing TSS from 70 to 12 without clear basis and gives little Atlas-specific preparation in the current week. Hard gates failed: block 1 is unchanged.

TODAY PLAN

10.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
7.7 s	$0.0433	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.8/2 · Design 2.3/3 · Rationale 1.6/2 · Grounding 1.6/2 · Detail 1.7/2

Judgment: The JSON is valid with the requested today object, correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and a null bikeWorkout, matching the planned Friday gym session. The exercise prescription is specific with sets, reps, rest, RPE-style reserve, and a back-pain fallback, and it stays within the athlete's gym and back constraints. Weaknesses: the warm-up is a treadmill or spin option that adds time not clearly budgeted, the 45-minute total is not checked against the listed blocks, and the rationale is somewhat generic about cycling position without tying the lift count to this week's target load. The estimated FTP of 220 W and TSS of 30 are consistent with the plan.

```
{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B + Daily Hip/Spine Mobility",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "45-minute gym strength session focused on safe hip-hinge rebuilding, single-leg control, and trunk stability for long-distance cycling and back resilience. Keep the effort controlled and leave 2-3 reps in reserve on every set. Take 90-120 seconds rest between working sets and let your heart rate fall below about 110 bpm before starting the next set. Session structure: 5-minute warm-up on treadmill or easy spin, then dynamic mobility for hips and thoracic spine; elevated knee-height rack pull or trap-bar pull 3 x 6 at a light load with a flat back and smooth tempo; bodyweight split squat 2 x 8 per side; lat pulldown 3 x 10 at a controlled moderate load; glute bridge or hip thrust 3 x 12; Pallof press 3 x 10 per side; front plank 3 x 30 seconds. Finish with your 8-minute hip/spine mobility circuit: couch stretch or low lunge, standing forward fold, 90/90 hip rotations, deep squat hold, supine figure-4 glute stretch, and cat-cow. If any hinge variation provokes your lower back, keep the pull height high and reduce load immediately.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain strength, hip control, and core stiffness that let you hold a more comfortable cycling position for very long rides, while also supporting your fat-loss block through productive low-total-stress work. It is the key strength stimulus of this week for improving back durability and reducing the sit-bone and climbing discomfort that limit your long-distance cycling. If you skip it, you lose this week's best opportunity to improve safe hinge mechanics and trunk support, which slows the mobility-and-strength foundation you need before bike volume rises."
  }
}
```

SEASON REVISION

8.5/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH

{
  "season": {
    "goal": "Build durable long-distance cycling fitness for the Atlas Mountain Race on 2027-02-28 while laying the foundation for the spring brevet series, starting with a comfortable 200 km brevet in April 2027, and preserving enough consistency to continue toward Paris-Brest-Paris in August 2027.",
    "rationale": "Your season now needs to support a much longer endurance arc than a single April brevet. The current phase is best used to build repeatable aerobic consistency, efficient cadence, and basic strength with conservative progression, because that gives you the durability to handle ultra-distance training later without burning through motivation in the first months. Through winter, the plan can use indoor cycling as the most controllable specific tool, with skiing and easy running adding aerobic volume and resilience when conditions suit. From mid-January onward, training should become more event-specific with longer sustained endurance, careful threshold work, fueling practice, climbing efficiency, and back-to-back durability so you are prepared first for the Atlas Mountain Race, then able to recover and carry that fitness into the brevet series.",
    "startDate": "2026-10-21",

      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If you prefer a non-impact option, do 20-25 minutes of easy indoor rowing or walking at the same 115-
135 bpm ceiling."
    ],
    "rationale": "This is the right session today because it closes the week with a very low-cost aerobic
stimulus while keeping you fresh for the first controlled quality ride next week. The run adds basic
durability and connective-tissue resilience that support your long-distance cycling goals without creating
the kind of fatigue that would blunt tomorrow's readiness. Indoors is the sensible choice given the wet,
cold conditions and your ability to control effort precisely.",
    "optional": false,
    "optionalRationale": "This session builds the aerobic durability and musculoskeletal resilience that
help you keep training consistently through winter and stay comfortable late into ultra-distance rides and
brevet days. If you skip it, you lose a small but useful touch of frequency and durability at almost no
fatigue cost, which matters because consistency is one of your key long-term limiters.",

aion-labs/aion-3.0

AionLabs: Aion-3.0

9.5/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	D	274.2 s	$0.1827	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00665	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.5/3 · Rationale 1.3/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute gym workout with the right indoor flags, date and FTP, and its structure follows the week plan: knee-height rack pulls, two split-squat sets, lat work, bridges, Pallof presses and planks, with sets, reps, rest and a heart-rate recovery cue. Its weaknesses are that no loads or load-progression guidance are given for the pulls, pulldowns or Pallof press, and no RPE or fallback is offered for lower-back or quad discomfort, so execution detail is thinner than the athlete's request for very specific strength prescriptions. The rationale ties the session to lower-back protection and brevet readiness, but it does not reference the week's target load or the block focus. Season revision: The output is valid, keeps block 1 starting on 2026-10-21, tiles the season without gaps, names Atlas in the season, block and week rationales, and gives a concrete, well-executed plan for today. Its main weakness is that block 1 is barely changed: only the rationale was rewritten while the weeks and targetLoad text stay as before, and no Atlas-specific preparation such as off-road, hike-a-bike or long-climb work appears in the block weeks. The plan also does not address the athlete's four-month ceiling with a reset, instead stacking roughly ten months of blocks, and it adds unsupported details such as off-road demands and night riding that are not in the input. Hard gates failed: block 1 is unchanged.

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April and the Atlas Mountain Race in
February.",

Google: Gemini 3.1 Pro Preview

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	**B**	**D**	**132.9 s**	**$0.2642**	**yes**

HARD GATES	JUDGE COST	JUDGED
pass	**$0.00648**	**anthropic/claude-haiku-5.5**

Mentions Atlas **pass**	Block 1 changed **pass**	Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is clean and matches the requested today object, with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and FTP of 220 W. The session sensibly follows the block's hinge progression: rack or trap-bar pulls, two bodyweight split-squat sets, rows and planks, with a 110 bpm recovery cue that matches the athlete's feedback. Weaknesses: the description gives no load guidance or RPE for the pulls and rows, omits the goblet squats the week plan asks for, and only refers to the mobility circuit rather than listing it. The rationale also mentions loading the deadlift, which the plan had replaced. Season revision: The season is refreshed in place with Atlas on 28 February 2027 as the anchor, the blocks tile contiguously to the August season end, block 1 still starts on 2026-10-21, and the week and today objects are coherent with the supplied data. Block 1 is only lightly changed: Week 2 load and Week 7 focus are adjusted, while the block name and Weeks 3-6 keep the original generic cycling loads with no off-road or hike-a-bike preparation for Atlas. The season invents qualifiers and events the athlete never mentioned (a 300 km qualifier, 400 km and 600 km brevets), and today's rationale calls Week 3 next week even though it starts tomorrow. Today's session and the week's sessions are otherwise well grounded in the rain forecast, the 135 bpm and 140 bpm caps, and the completed sessions.

Judgment: The JSON is clean and matches the requested today object, with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and FTP of 220 W. The session sensibly follows the block's hinge progression: rack or trap-bar pulls, two bodyweight split-squat sets, rows and planks, with a 110 bpm recovery cue that matches the athlete's feedback. Weaknesses: the description gives no load guidance or RPE for the pulls and rows, omits the goblet squats the week plan asks for, and only refers to the mobility circuit rather than listing it. The rationale also mentions loading the deadlift, which the plan had replaced.

```
    "description": "Focus on safe hip-hinge mechanics and core stability. Warm up with 5-10 minutes of light cardio. Main circuit: 1. Elevated knee-height rack pulls or trap-bar pulls (3 sets of 8-10 reps, light to moderate weight). 2. Bodyweight split squats (2 sets of 8-10 reps per leg). 3. Seated cable rows or dumbbell rows (3 sets of 10 reps). 4. Plank (3 sets of 30-45 seconds). Take a full 90-120 seconds of rest between all sets, ensuring your heart rate drops below 110 bpm before starting the next set. Finish with your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session rebuilds your posterior chain and hip hinge mechanics safely, which is essential for eliminating lower-back pain on long climbs and improving your cycling posture. Skipping it delays the structural adaptations needed before we can safely load your deadlift."

SEASON REVISION

9.1/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
124.0 s	**$0.2221**	**no**	**yes**	**200**	**stop**

Contract 1.4/1.5 · Fidelity 1.5/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.3/2

Judgment: The season is refreshed in place with Atlas on 28 February 2027 as the anchor, the blocks tile contiguously to the August season end, block 1 still starts on 2026-10-21, and the week and today objects are coherent with the supplied data. Block 1 is only lightly changed: Week 2 load and Week 7 focus are adjusted, while the block name and Weeks 3-6 keep the original generic cycling loads with no off-road or hike-a-bike preparation for Atlas. The season invents qualifiers and events the athlete never mentioned (a 300 km qualifier, 400 km and 600 km brevets), and today's rationale calls Week 3 next week even though it starts tomorrow. Today's session and the week's sessions are otherwise well grounded in the rain forecast, the 135 bpm and 140 bpm caps, and the completed sessions.

  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, followed by a full brevet series leading to a successful finish at Paris-Brest-Paris in August 2027, using structured, varied blocks to maintain motivation and prevent burnout.",
    "rationale": "Targeting the Atlas Mountain Race in February 2027, followed by a brevet series leading to Paris-Brest-Paris in August, requires massive aerobic durability, climbing strength, and the ability to handle back-to-back long days. Because you have historically found it hard to maintain disciplined training for more than four months, this season is deliberately broken into distinct, highly focused blocks. Shifting the stimulus regularly—from base building to AMR-specific off-road prep, then a recovery phase, followed by road-specific brevet pacing—keeps the training fresh and prevents mental burnout. The current block builds the foundational aerobic efficiency and low-load strength needed for the hike-a-bike sections of AMR and the endless pedaling of PBP, without stacking early fatigue.",

OpenAI: GPT Chat Latest

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	A+	D	34.8 s	$0.3072	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00684	anthropic/claude-haiku-5.5

Mentions Atlas	pass	Block 1 changed	pass	Block 1 starts 2026-10-21	pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.6/2 · Design 2.1/3 · Rationale 1.5/2 · Grounding 1.3/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid and matches the requested today object with status planned, workout and moderate values, 45 minutes, indoor and non-bike flags consistent with a gym session, and TSS and FTP aligned with the plan. The session is a detailed, sensible gym strength B with sets, reps, rest and stop conditions, though it departs from the plan's specified exercises (elevated pulls, split squats at two sets, Pallof at 3x10 and no seated cable row or dead bug in the weekly plan) and the 3 sets of 8 pulls with 2 working sets labelling is internally inconsistent. The rationale is grounded in fat loss, back tolerance and the plan goal, but it leans on some generic claims and does not explicitly reference the athlete's evening hunger pattern beyond a brief fat-loss note. Season revision: The season is refreshed in place with Atlas named in the goal and in dedicated Atlas preparation, taper, event and recovery blocks, and the later blocks tile contiguously through the season end, with PBP and the April brevet preserved. Block 1 starts on 2026-10-21, names Atlas in its focus, and the week and today are coherent with it. Weaknesses: the cycling sections give no power targets despite the athlete asking for them, the season goal invents a self-supported requirement the athlete did not state, the final post-event block has only two weeks over nine days, and the season and block rationales are long and generic in places. Today's optional run is justified with a concrete cost and the outline weeks show a clear easy and hard shape.

    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Today's 45-minute gym session develops the posterior-chain strength, hip stability, and core endurance you need for comfortable long-distance cycling, while carefully rebuilding your tolerance for hip-hinge movements. Your Tuesday strength session went well, with manageable quadriceps burning during goblet squats, and Wednesday's run/row combination felt easy. You are ready for a second controlled strength session.\n\nIMPORTANT: Today's priority is movement quality, not lifting heavy weights. Keep approximately 3–4 repetitions in reserve on every working set. Stop any exercise that causes sharp pain or increasing lower-back discomfort.\n\n1. WARM-UP — 6 minutes\n- 4 minutes easy stationary cycling, gradually raising your heart rate toward 100–115 bpm.\n- 8 unloaded hip hinges, practicing pushing your hips backward while maintaining a neutral spine.\n- 8 slow bodyweight squats to a comfortable depth.\n- 6 alternating standing knee raises per side.\n\n2. ELEVATED RACK PULL OR TRAP-BAR PULL — 3 sets × 8 repetitions\n- Set the bar approximately at knee height using rack supports or blocks.\n- First set: very light familiarization weight, potentially just the unloaded bar.\n- Working sets: 2 × 8 at a conservative weight that allows completely controlled technique.\n- Keep the bar close to your legs, brace your abdomen, and extend through your hips without leaning backward at the top.\n- Lower the weight slowly over approximately 2–3 seconds.\n- Rest 120 seconds between sets.\n- Your lower back should feel stable throughout. If you cannot maintain a neutral spine or experience back discomfort, substitute 2 × 12 unloaded standing hip hinges instead.\n\n3. BODYWEIGHT SPLIT SQUAT — 2 sets × 8 repetitions per leg\n- Use a rack or stable support for balance.\n- Take a comfortable staggered stance and lower vertically through a pain-free range.\n- Keep your front knee tracking in line with your foot.\n- Use bodyweight only today.\n- Rest 90 seconds between sets.\n- Your quadriceps experienced manageable burning during Tuesday's squats. These two conservative sets provide a useful single-leg strength stimulus without unnecessarily increasing fatigue before Saturday's hike.\n\n4. SEATED CABLE ROW — 3 sets × 10 repetitions\n- Choose a moderate weight that leaves approximately 3 repetitions in reserve.\n- Keep your torso stable and avoid rocking backward to move the weight.\n- Pull toward your lower ribs while gently bringing your shoulder blades together.\n- Rest 90 seconds between sets.\n- This strengthens your upper back and improves your ability to maintain a comfortable cycling position over many hours.\n\n5. PALLOF PRESS — 2 sets × 10 repetitions per side\n- Use the same manageable resistance as Tuesday.\n- Stand tall with knees slightly bent and ribs stacked over your pelvis.\n- Press the handle forward without allowing your torso to rotate.\n- Hold briefly before returning.\n- Rest 45–60 seconds between sets.\n\n6. DEAD BUG — 2 sets × 6 repetitions per side\n- Lie on your back with your hips and knees bent approximately 90 degrees.\n- Brace your abdomen gently while maintaining a comfortable, stable lower-back position.\n- Slowly extend the opposite arm and leg without allowing your pelvis to tilt.\n- Return and alternate sides.\n- Rest 45–60 seconds between sets.\n- Prioritize controlled breathing and spinal stability rather than speed.\n\nRECOVERY BETWEEN SETS\nTake the full prescribed rest periods. Where practical, allow your heart rate to fall below approximately 110 bpm before beginning another demanding set. Do not rush to finish the session. If the exercises require more than 45 minutes, prioritize the rack pulls, split squats, cable rows, and Pallof presses rather than shortening your recovery periods.\n\nDAILY HIP AND SPINE MOBILITY — 8 minutes after training\nComplete your established mobility routine:\n- Couch stretch or low lunge with hips gently pushed forward.\n- Standing forward fold, initially keeping your knees soft.\n- 90/90 hip rotations.\n- Supported deep squat hold.\n- Supine figure-4 glute stretch.\n- Slow cat-cow spinal movements.\n\nMove gently between positions, distributing approximately 8 minutes across the six exercises. Avoid forcing your hamstrings or lumbar spine into uncomfortable ranges. This mobility routine is additional recovery work and is not counted in the 45-minute strength session.\n\nSESSION SUCCESS CRITERIA\nYou should finish feeling that your muscles have worked, but without significant exhaustion, worsening quadriceps soreness, or lower-back irritation. Your elevated pulls should feel technically controlled rather than heavy. Record the weights used and note any discomfort, particularly during the hip hinge.\n\nFAT-LOSS SUPPORT\nBecause you tend to become hungry after work, consider a protein-rich afternoon snack before heading to the gym. Eat a normal, satisfying dinner containing protein, vegetables, and an appropriate carbohydrate portion afterward. A small sustainable calorie deficit across the week matters more than restricting food aggressively after individual workouts.",
    "optional": false,
    "optionalRationale": "Today's strength session directly supports three priorities in your season plan: sustainable fat loss, improved cycling comfort, and long-term resilience for Paris-Brest-Paris in August 2027. The elevated rack pulls develop hip-extension strength and teach you to tolerate loaded bending without immediately exposing your vulnerable lower back to heavy deadlifts. Split squats improve single-leg strength and pelvic control, while cable rows and anti-rotation core exercises build the postural endurance needed to support your torso through prolonged climbs and consecutive days of cycling. This is particularly relevant because you currently experience lower-back fatigue on long climbs and during crouching activities. Combined with your daily mobility work, stronger trunk and hip musculature may also help you tolerate a more comfortable cycling position, although saddle discomfort will still require appropriate bike fit and contact-point management. Maintaining two appropriately spaced strength sessions each week provides a meaningful stimulus for rebuilding strength and preserving muscle during gradual fat loss toward your 15% body-fat goal. Skipping today's session would leave you with only one strength stimulus this week, reducing the consistency of your hip-hinge practice, posterior-chain development, and core conditioning. These adaptations take months to establish safely, so regular moderate sessions are more valuable than occasional demanding workouts. Today's approximately 30 TSS also contributes a modest amount of training stress to your introductory foundation week without compromising your planned two-hour aerobic hike tomorrow. The session is therefore purposeful rather than optional, while individual exercises should always be reduced or stopped if your back becomes uncomfortable."

SEASON REVISION

9.2/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
23.5 s	**$0.1903**	**no**	**yes**	**200**	**stop**

Contract 1.3/1.5 · Fidelity 1.6/2 · Design 2.1/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.1/2

Judgment: The season is refreshed in place with Atlas named in the goal and in dedicated Atlas preparation, taper, event and recovery blocks, and the later blocks tile contiguously through the season end, with PBP and the April brevet preserved. Block 1 starts on 2026-10-21, names Atlas in its focus, and the week and today are coherent with it. Weaknesses: the cycling sections give no power targets despite the athlete asking for them, the season goal invents a self-supported requirement the athlete did not state, the final post-event block has only two weeks over nine days, and the season and block rationales are long and generic in places. Today's optional run is justified with a concrete cost and the outline weeks show a clear easy and hard shape.

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race starting February 28, 2027, with sufficient endurance,
climbing durability, fatigue resistance, and self-supported riding capability. Recover appropriately
afterward, complete the spring 2027 randonneur brevet series beginning with the 200 km event in April, and
build toward Paris-Brest-Paris in August 2027. Develop a sustainable training routine that maintains
consistency beyond your previous maximum of approximately four months of disciplined training.",
    "rationale": "Your season has three connected objectives: the Atlas Mountain Race on February 28, the
spring brevet series, and Paris-Brest-Paris in August. The Atlas Mountain Race is the first major priority
and requires sustained endurance, repeated climbing, efficient pacing, and the ability to manage fatigue
over multiple days. Paris-Brest-Paris demands similar aerobic durability but places greater emphasis on
maintaining consistent progress over very long distances. Your history of struggling to maintain disciplined
training beyond four months makes sustainability a central performance objective. Training will therefore
use progressive overload, regular recovery weeks, flexible cross-training, and a limited number of demanding
sessions rather than continuous increases in volume. Your current FTP of 225 W provides a practical baseline
for cycling intensity. Recent controlled riding, hiking, and strength sessions demonstrate useful aerobic
fitness, while the October Zwift race highlights the importance of preventing excessive high-intensity load.
The first phase builds consistency and aerobic efficiency. Winter training progressively develops climbing
endurance and sustained power before the Atlas Mountain Race. Recovery afterward creates the foundation for
the spring brevets, followed by a second progressive build toward Paris-Brest-Paris. This longer season
requires deliberate recovery after major events and periodic reductions in training load to protect
motivation, health, and long-term consistency. Exact event durations, brevet dates beyond April, and Paris-
Brest-Paris logistics remain unconfirmed, so their preparation is structured conservatively.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build sustainable aerobic consistency, cycling efficiency, low-fatigue muscular strength, and
the training habits needed for the Atlas Mountain Race and subsequent ultra-distance events.",
    "rationale": "Your first block establishes the foundation for a demanding endurance season extending
through August 2027. The immediate priority is not maximizing FTP or weekly training volume but developing a
repeatable training routine that you can maintain without the progressive fatigue and loss of consistency
you have experienced after approximately four months of disciplined training. Your recent easy cycling,
controlled hiking, and strength sessions provide a useful starting point. However, the October 20 Zwift race
produced substantial training stress, and your cycling cadence has sometimes fallen below the desired range.
Consequently, most cycling remains comfortably aerobic, with heart rate generally below 140 bpm and cadence
above 85 rpm on suitable terrain. Two recent strength sessions indicate that resistance training can
contribute meaningfully to your preparation, although one well-executed session per week is sufficient
during the initial rebuild. Strength should emphasize controlled movements, trunk stability, and gradual
progression rather than maximal effort. The block introduces a limited amount of sustained-power training
only after consistent aerobic execution is established. Longer weekend rides gradually develop the
durability needed for repeated climbing and long-distance cycling. Every fourth week emphasizes recovery,
helping you absorb training and maintain motivation. Cross-training remains available through hiking,
running, rowing, and eventually skiing, but cycling receives priority because it provides the most specific
adaptation for your upcoming events. Fueling practice begins during longer sessions rather than waiting
until the race-specific phase. FTP remains anchored at 225 W, with only small projected improvements because
recent evidence does not justify a larger increase. The block concludes with aerobic consolidation before
```

  "week": {
    "startDate": "2026-10-26",
    "focus": "Complete a conservative aerobic rebuild with controlled strength training, easy cross-
training, and sufficient freshness for the next cycling-specific training phase.",
    "rationale": "Your training this week has provided useful aerobic and strength work without repeating
the excessive intensity of the October 20 Zwift race. Tuesday and Friday included strength training, while
Wednesday combined easy rowing and running. Saturday's 125-minute hike added substantial low-intensity
endurance with an average heart rate of 114 bpm. These activities support the muscular resilience and
aerobic durability needed for the Atlas Mountain Race. However, cycling-specific training has been limited,
and developing efficient pedaling at a cadence above 85 rpm remains an important priority. The week's final
session is therefore deliberately short and easy. Its purpose is to retain running-specific conditioning
without accumulating fatigue before cycling frequency increases. Your recent feedback indicates that you
feel good, supporting continued progression, but the training history favors a measured approach rather than
an aggressive increase. The longer-term goal is to develop training consistency that lasts through the Atlas
Mountain Race, spring brevets, and Paris-Brest-Paris. Your week ends with a modest aerobic stimulus and no
additional demanding session.",

    "alternatives": [
      "If your legs still feel heavy from Saturday's hike, cut it to 20 minutes and keep heart rate under
125 bpm.",
      "If the weather clears and you prefer to be outside, run the same 30 minutes on flat paths and hold
the same 115-135 bpm ceiling."
    ],
    "rationale": "This closes a week whose aerobic ceiling was respected on every session, so the aim is to
keep the week's shape without adding load before Week 3's first controlled threshold stimulus. Thirty easy
minutes maintains the running-specific durability that supports your cycling base through the winter and
costs almost nothing in fatigue the day after a 2 h 05 min hike. It stays indoors because rain and strong
gusts are forecast all day, and the 115-135 bpm ceiling keeps it strictly aerobic.",
    "optional": true,
    "optionalRationale": "This short run supports the low-intensity aerobic conditioning and running-
specific tissue resilience that will help you maintain endurance fitness through winter, when skiing,
hiking, and running can complement your cycling. That flexibility matters for sustaining consistent
preparation through the Atlas Mountain Race and ultimately Paris-Brest-Paris. Skipping the session would
mean losing a small opportunity to maintain running economy and aerobic training frequency, but it would
have little effect on your cycling-specific fitness. You have already accumulated substantial aerobic
activity this week, including yesterday's two-hour hike, and cycling remains your primary sport. The small
fitness cost of skipping is acceptable if your legs feel heavy or you would benefit more from recovery
before next week's cycling sessions. If you feel fresh, complete the run at a genuinely easy effort without
extending its duration or increasing intensity.",

deepseek/deepseek-v4-pro

9.4/12.5

DeepSeek: DeepSeek V4 Pro 0423

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A+	207.1 s	$0.0117	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00648	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.6/3 · Rationale 0.8/2 · Grounding 1.6/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is clean, uses the correct date and planned status for today, and the session fits the Friday Gym Strength B slot with a moderate 45-minute prescription and explicit sets, reps, and 90 to 120 second rest that respects the athlete's heart-rate recovery cue and the two-set cap on split squats. The main weakness is that optionalRationale is left empty while optional is false, and the purpose statement is buried in the description as a Rationale sentence rather than naming the concrete loss from skipping, so the rationale component is weak. Detail is good on load guidance and technique cues, though it lacks explicit stop conditions for back pain and a fallback for the rack pull equipment. Season revision: The response names Atlas throughout the season, rewrites the season goal and rebuilds the post-block structure around Atlas, PBP and the brevet series, and keeps block 1 starting on 2026-10-21 with a changed focus and rationale. The block dates tile correctly through 2027-08-29 and today, tomorrow and nextWeek are handled as required. However, the design is weak: block 3 runs straight into Atlas on 28 February with no taper or race-readiness phase, the season spans about ten months of continuous structured blocks despite the athlete's stated four-month disciplined-training ceiling, and the later block weeks still carry the old winter-plan wording rather than Atlas-specific targets. The Wednesday session was also merged and retitled as a combined rowing and run day, which alters a completed record more than necessary.

Contract 1.4/1.5 · Fidelity 1.8/2 · Design 2.5/3 · Rationale 0.8/2 · Grounding 1.7/2 · Detail 1.5/2

Judgment: The JSON is clean, uses the correct date and planned status for today, and the session fits the Friday Gym Strength B slot with a moderate 45-minute prescription and explicit sets, reps, and 90 to 120 second rest that respects the athlete's heart-rate recovery cue and the two-set cap on split squats. The main weakness is that optionalRationale is left empty while optional is false, and the purpose statement is buried in the description as a Rationale sentence rather than naming the concrete loss from skipping, so the rationale component is weak. Detail is good on load guidance and technique cues, though it lacks explicit stop conditions for back pain and a fallback for the rack pull equipment.

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Warm-up: 5 min dynamic mobility (leg swings, cat-cow, hip circles, bodyweight squats).
Main work, with 90–120 s rest so HR drops below 110 bpm before each set: 1) Elevated knee-height rack or
trap-bar pulls – 3×10, light load (~30–40 kg) focusing on flat-back hip hinge; 2) Bodyweight split squats –
2×8 each leg, controlled tempo; 3) Lat pulldowns – 3×10 at moderate weight (start ~40 kg); 4) Pallof press –
3×10 per side, hold end-range 2–3 s; 5) Plank – 2×30 s; 6) Side plank – 2×30 s each side. Cool-down: 5 min
hip-flexor/low-back stretching. Finish with 8 min unrecorded hip/spine mobility circuit (couch stretch,
forward fold, 90/90, deep squat hold, figure-4, cat-cow). Rationale: Builds the posterior-chain and core-
stability foundation essential for a pain-free, aerodynamic cycling posture on long rides and climbs, while
protecting your lower back and quads.",

SEASON REVISION

9.1/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
172.4 s	**$0.00777**	**no**	**yes**	**200**	**stop**

Contract 1.5/1.5 · Fidelity 1.5/2 · Design 1.6/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.4/2

Judgment: The response names Atlas throughout the season, rewrites the season goal and rebuilds the post-block structure around Atlas, PBP and the brevet series, and keeps block 1 starting on 2026-10-21 with a changed focus and rationale. The block dates tile correctly through 2027-08-29 and today, tomorrow and nextWeek are handled as required. However, the design is weak: block 3 runs straight into Atlas on 28 February with no taper or race-readiness phase, the season spans about ten months of continuous structured blocks despite the athlete's stated four-month disciplined-training ceiling, and the later block weeks still carry the old winter-plan wording rather than Atlas-specific targets. The Wednesday session was also merged and retitled as a combined rowing and run day, which alters a completed record more than necessary.

```
{
  "season": {
    "goal": "Complete the Atlas Mountain Race on 28 February 2027 with durable climbing endurance, then
finish the brevet series culminating in Paris-Brest-Paris in August 2027—starting with a 200 km brevet in
April—while respecting a maximum 4-month disciplined training window.",
    "rationale": "The season is structured around three anchors: Atlas Mountain Race (28 Feb 2027), a
randonneur brevet series beginning with a 200 km in April, and Paris-Brest-Paris in August 2027. The athlete
can sustain disciplined training for roughly 4 months, so each phase has a sharp focus with periodic deloads
and transitions. The first block builds an aerobic and strength foundation; winter cross-training preserves
cycling specificity while developing general durability through skiing and running; a sustained-power build
sharpens climbing endurance for Atlas; post-race recovery and a brevet-specific phase prepare for the 200 km
qualifier; a progression through longer brevets builds the ultra-endurance needed for PBP; and a final taper
and race block delivers a healthy, well-fuelled performance in August.",

  },
  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control.",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 min rowing plus a 32-min easy run, a missed Thursday
trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned 90-min
trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the week closes
with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and Sunday stays
deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-min run keeps
running-specific durability alive at minimal cost, and the week's remaining priority—cadence above 85 rpm
from the first minute of every ride—carries into next week, because repeatable efficiency at low intensity
is what carries you through ultra-endurance events like the Atlas Mountain Race and the brevet series.",

9.3/12.5

Google: Gemini 2.5 Pro Preview 06-05

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	B	D	119.4 s	$0.1677	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00670	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.9/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the planned 45-minute moderate gym session on 2026-10-30 with the correct indoor flag, 220 W FTP and 30 TSS. The exercise selection is sensible and follows the coach's Gym Strength B direction, with explicit sets, reps, rest periods and a cue for the hinge, though the load guidance stays vague and there are no stop conditions or RPE targets. The rationale is somewhat generic: it cites back strength and posture but does not name the concrete cost of skipping toward the fat-loss or block goals. Season revision: The candidate names Atlas in the season goal, the block 2 name and the Atlas taper block, and block 1 still starts on 2026-10-21 with a valid eight-key contract and seven week sessions. Its main fidelity flaw is that the season endDate of 2027-08-31 does not match the last block, which ends 2027-08-20, leaving an unplanned gap. Block 1 is only lightly changed: its focus and rationale are reworded while its weeks and targetLoad text stay as supplied, and today's description is rewritten rather than kept with a completion note. The season also runs continuously from October to March without the athlete's stated four-month reset, which weakens the design. The weekly and daily rationales are specific and grounded in the athlete's constraints, but the outline days give little concrete detail.

Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.9/3 · Rationale 1.5/2 · Grounding 1.6/2 · Detail 1.2/2

Judgment: The candidate names Atlas in the season goal, the block 2 name and the Atlas taper block, and block 1 still starts on 2026-10-21 with a valid eight-key contract and seven week sessions. Its main fidelity flaw is that the season endDate of 2027-08-31 does not match the last block, which ends 2027-08-20, leaving an unplanned gap. Block 1 is only lightly changed: its focus and rationale are reworded while its weeks and targetLoad text stay as supplied, and today's description is rewritten rather than kept with a completion note. The season also runs continuously from October to March without the athlete's stated four-month reset, which weakens the design. The weekly and daily rationales are specific and grounded in the athlete's constraints, but the outline days give little concrete detail.

{
  "season": {
    "goal": "Your primary goal is the Atlas Mountain Race on February 28, 2027, followed by Paris-Brest-
Paris in August 2027. This plan is designed to build the deep ultra-endurance, durability, and consistency
required for these events, while also preparing you to comfortably complete the qualifying brevet series
starting in April. A key focus is sustainable progression, respecting your history of peaking after 4 months
of training.",
    "rationale": "This season is structured to build you towards your ambitious ultra-endurance goals of the
Atlas Mountain Race and Paris-Brest-Paris. Given your feedback on maintaining progress, the entire plan is
built around long-term sustainability. We will start with a foundational block to establish a deep aerobic
base, improve cycling efficiency, and build functional strength. The plan then progresses to event-specific
training, first focusing on the demands of the AMR (endurance, climbing, back-to-back days), followed by a
recovery period. The second half of the season will shift focus to the long-distance road endurance required
for the brevet series and PBP, using the brevets themselves as key training milestones. This long-term,
periodized approach is designed to build your fitness methodically and bring you to your peak for each major
event.",

moonshotai/kimi-k2.6

9.3/12.5

MoonshotAI: Kimi K2.6

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	D	D	437.8 s	$0.2274	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00628	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.5/2 · Grounding 1.3/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is valid with the requested today object, correct date, planned status, workout type, moderate intensity, 45 minutes and no bikeWorkout, matching the plan. The session gives concrete hinge and split-squat sets with rest and a stop-free structure, but it adds incline dumbbell presses and side planks that the plan never specified, and the 5 minute warm-up and 3 minute cool-down push the total beyond the 45 minute target in places. The rationale ties the session to back pain and saddle pressure, but it does not name the lost fat-loss or hunger-control benefit, and optional is false with an empty optionalRationale, which is acceptable. The description assumes the Friday template was not specified, which is a useful transparent assumption, but it also omits explicit load guidance for the elevated pulls and split squats. Season revision: The season tiles correctly from 2026-10-21 with block 1 kept at that start, tomorrow, nextWeek and nextBlock stay null, and Atlas, PBP and the April 200 km are all named in the season. The main design flow is that the season rationale claims disciplined periods stay under the four-month ceiling, yet blocks 1 to 4 run contiguously from October 21 to April 4 with no reset, which contradicts the athlete's stated limit. Block 1 keeps its original name and focus and only lightly reworks its weeks, so Atlas appears mainly in the rationale rather than in the block itself. The Wednesday and Thursday past sessions were also rewritten, merging rowing and running into one 47-minute workout and altering a missed session, which strains the instruction to leave completed history as recorded. Today's run is well detailed and grounded in the forecast and the 2 h 05 min hike, and the week totals are internally consistent.

    "bikeWorkout": null,
    "description": "Gym Strength B: the second half of your Week 1 re-entry lifting block. Begin with 5
minutes of easy cycling or rowing plus dynamic hip and ankle mobility. Then complete 3 sets of 8 reps of
elevated rack or trap-bar pulls from knee height, taking a full 90–120 seconds of rest between sets so your
heart rate falls below 110 bpm before each set; maintain a rigid neutral spine and drive through the heels
to retrain the hip hinge without stressing your lumbar region. Next, perform 2 controlled sets of 8
bodyweight Bulgarian split squats per side, resting 90 seconds between sets and keeping your torso tall to
stretch hip flexors while building single-leg stability. Because the detailed Friday template was not fully
specified beyond these hinge and squat patterns, assume this session also includes 2 sets of 10 incline
dumbbell presses and 2 sets of 30-second side planks per side to balance Tuesday’s pulling and anterior-core
emphasis, followed by a 3-minute easy cool-down. This keeps total elapsed time near 45 minutes. Finish with
your unrecorded 8-minute daily hip and spine mobility circuit. This moderate session directly rebuilds the
posterior-chain strength and hip flexibility required to lower your cycling position, reducing sit-bone
pressure and back ache on long climbs; skipping it would sacrifice the hinge patterning and single-leg
stability that protect your back as loaded bike volume increases.",

  "season": {
    "goal": "Complete Atlas Mountain Race on 28 February 2027, comfortably finish a 200 km randonneur brevet
in April 2027, and finish Paris-Brest-Paris in August 2027 with sustainable pacing, durable aerobic
endurance, and climbing strength.",
    "rationale": "Your season now targets three peaks: Atlas Mountain Race on 28 February 2027, a 200 km
randonneur brevet in April 2027, and Paris-Brest-Paris in August 2027. Because you can maintain disciplined
training progress for a maximum of about four months, the season is organized into focused blocks of roughly
eleven to fourteen weeks separated by shorter recovery and unstructured maintenance periods that reset your
mental and physical discipline capacity. The current block establishes aerobic durability and efficient
cadence. The winter build moves into threshold work and endurance riding that feeds Atlas, followed by a
dedicated peak and taper. After Atlas, a brief brevet-specific block converts residual fitness into 200 km
pacing and fueling. A five-week unstructured maintenance phase in late spring rebuilds motivation before an
eleven-week PBP base-and-build phase and a final four-week taper. We assume Paris-Brest-Paris falls around
late August 2027; the exact taper week can be shifted once the official date is published. This sequencing
keeps each continuous disciplined period under your four-month ceiling while building the aerobic
durability, climbing strength, and fueling habits you need for ultra-distance cycling.",

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This block must establish the aerobic durability and pedaling efficiency that preserves
power across the twelve- to twenty-four-hour efforts of Atlas Mountain Race and Paris-Brest-Paris. From this
point forward, fatigue is low because every aerobic session in Week 2 stayed under 140 bpm, and the
remaining five weeks progress volume conservatively: one controlled threshold stimulus in Week 3, a deload
in Week 4, then a gradual volume peak through Week 6 before consolidating. Cadence above 85 rpm from the
first minute of every ride is the non-negotiable priority, because efficient spin is what prevents knee
fatigue on long mountain climbs and endless brevet miles. Strength work remains light and full-body to
support bike handling without adding systemic load that would eat into your limited disciplined-training
capacity.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "You are closing this week with fatigue well controlled: Tuesday and Friday strength was
moderate and intermittent, Wednesday's rowing and run stayed strictly easy, Saturday's hike replaced the
planned trainer ride without adding intensity, and all of it stayed under the 140 bpm ceiling. Today's 30-
minute treadmill run simply keeps running-specific tissue durability alive at minimal cost before Week 3
introduces the block's first quality stimulus. That low-stress finish is exactly what you need so the
threshold session ahead delivers a true fitness signal rather than a fatigue response. The priority for the
remaining base phase remains cadence above 85 rpm from the first minute of every ride, because that
efficiency carries directly into the Atlas and PBP builds ahead.",

deepseek/deepseek-v4.1-flash-1017

9.2/12.5

DeepSeek: DeepSeek V4.1 Flash 1017

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	A	A+	80.8 s	$0.0100	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00651	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.4/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid, matches the requested today shape, uses the correct date and planned status, and keeps the planned 45-minute moderate gym session with correct flags and FTP. The session follows the week plan's hinge and split-squat progression and the athlete's safety limits, but it omits the heart rate targets the athlete asked for and the lat pulldown and planks lack load or progression guidance. The rationale is specific to back resilience and the spring brevets, though it never explains why this session matters this particular week beyond general statements, and the warm-up and stop conditions are present but thin. Season revision: The answer names Atlas in the goal and in the block 3 name, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and gives a detailed 50-minute indoor cadence session with power targets that sum correctly. Its main weakness is design: the Atlas build block ends on race day 2027-02-28 with no taper or reduced-volume week before the race, which contradicts the sane-taper expectation. Block 6 also declares 10 weeks across a span of about 65 days, and the season claims to respect the four-month limit through shorter blocks while only Block 1 contains a deload. Smaller issues include merging the past Wednesday rowing and run into one session, extra top-level keys beyond the eight requested, and a today rationale that still uses replacement wording.

google/gemini-3.1-flash-image-preview

9.2/12.5

Google: Nano Banana 2 (Gemini 3.1 Flash Image Preview)

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A	31.3 s	$0.0265	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00631	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 1.3/2 · Design 1.6/3 · Rationale 1.2/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout and moderate values, 45 minutes, indoor flags, and an estimated FTP of 220 W, matching the current plan's Friday gym session. The exercise list is sensible and includes the planned elevated hinge and split squats, with rest guidance tied to the coach's sub-110 bpm recovery target. However, it adds dumbbell bench press and dead bugs without loads, gives no load progression or RPE guidance from the last goblet squat weights, and has no stop conditions for the lower back. The rationale is specific to the back and posture goals but leans on the word critical and does not explain what the sessions structure adds beyond general strength. Season revision: Strengths: Atlas is named in the season goal, the AMR block name and the block rationale, block 1 still starts on 2026-10-21, the season blocks tile to 2027-08-31, and the week keeps seven sessions with tomorrow and nextWeek correctly null. Weaknesses: the AMR block ends on the race day itself (2027-02-28) with no taper or race-specific reduction, the Oct-Feb run of blocks 1 and 2 totals about 19 weeks, which exceeds the athlete's stated four-month ceiling without a reset, and the season rationale is meta-commentary about updating the plan. Block 1 itself is barely changed (only its rationale text), the completed rest day is labelled completed rather than rest, and the completed-session rewrites add little new detail. Hard gates failed: block 1 is unchanged.

TODAY PLAN

    "durationMinutes": 45,
    "outdoor": false,
```

```
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Execute this second gym session of the week with a focus on safe movement patterns. Warm
up with 5-10 minutes of light cardio (rowing or stair machine) and dynamic stretching. Perform 2 sets of 10-
12 reps of bodyweight split squats, focusing on balance and control to manage quad fatigue. For the main
hinge movement, perform 3 sets of 8-10 reps of elevated knee-height rack pulls or trap-bar deadlifts,
ensuring a flat back and powerful hip drive to safely rebuild posterior chain strength. Complete the session
with 3 sets of 10-12 reps of dumbbell bench press, 3 sets of 10-12 reps of single-arm dumbbell rows, and 3
sets of 10-12 reps of dead bugs for core stability. Take 90-120 seconds of rest between sets to allow your
heart rate to drop below 110 bpm. Finish with your daily 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session is critical for building the core stability and posterior chain
resilience needed to eliminate the back ache you experience on long climbs and to support a more
comfortable, sustainable cycling posture. Skipping it delays the adaptation of your lower back to strength
training, which is essential for your long-term goal of pain-free long-distance riding and prevents progress
toward your core strength and flexibility goals."

google/gemini-3.6-flash

Google: Gemini 3.6 Flash

9.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	A	B	62.8 s	$0.0689	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00639	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.6/3 · Rationale 1.2/2 · Grounding 1.6/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is clean, has only the requested today object, and matches the date, planned status, moderate 45-minute gym workout, non-outdoor flags, 30 TSS and 220 W estimates from the plan. The exercise selection follows the plan's Strength B intent, with knee-height pulls replacing floor deadlifts, capped split squats, lat pulldowns, Pallof presses and planks, and it reflects the athlete's back and hip concerns. Weaknesses include no load progression or RPE guidance, a lat pulldown range of 30 to 40 kg that ignores the 50 kg the athlete previously managed, no stop conditions or fallback for back pain, and a rationale that overpromises by saying the work will eliminate back pain and sit-bone pressure. Season revision: The response is valid, keeps block 1 starting on 2026-10-21, tiles the season through 2027-08-29 with no gaps or overlaps, names Atlas in the season and in block 3, and keeps tomorrow, nextWeek and nextBlock null with an empty bodyMetrics array. Block 1 is barely changed, though: its name, focus and rationale are the same as supplied, and only the Week 2 target load moved. The season has no taper or deliberate reset before the 28 February Atlas race, and the 4-month sustainability limit is not explicitly handled across a roughly 10-month plan. The block 3 focus contains a typo, and the block 1 week sessions and rationale say nothing about Atlas, so the current plan shows little Atlas preparation.

TODAY PLAN

10.4/12.5

    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Perform Gym Strength B at the gym with strict focus on lower-back safety and controlled
effort. Begin with light dynamic mobility, then execute 3 sets of 8–10 reps of elevated knee-height rack
pulls or trap-bar pulls using a flat-back hip hinge to build posterior chain strength without lower back
strain; perform 2 sets of 8–10 bodyweight split squats per side (capped at 2 sets to protect your quads); 3
sets of 10 lat pulldowns (30–40 kg); 3 sets of 10 Pallof presses per side; and 3 x 30-second plank holds.
Take a full 90–120 seconds of rest between sets so your heart rate drops below 110 bpm before starting each
set. Conclude with your 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This strength session builds the posterior chain strength, flat-back hip hinge
mechanics, and core anti-rotation stability needed to eliminate lower-back pain, sit-bone pressure, and
fatigue on long cycling climbs. Skipping this workout delays rebuilding glute and spine durability, leaving
your lower back vulnerable to strain when cycling distance and climbing volume increase."

Google: Gemini 2.5 Pro

9.2/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	B	C	106.4 s	$0.1229	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00678	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.5/2 · Design 1.5/3 · Rationale 1.2/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, contains only the requested today object, and matches the date, planned status, 45-minute moderate indoor gym session, FTP of 220 W, null bikeWorkout and TSS of 30 from the current week plan. The exercise selection is sensible and specific, with sets and reps for the hinge pull, split squats, row, press and core work, plus a 90 to 120 second rest and heart-rate recovery cue. Weaknesses: no load guidance or RPE beyond starting light, the goblet squat progression from the plan is dropped without comment, and the rationale leans on generic claims such as lean muscle accelerating fat loss rather than the athlete's specific quad-burn feedback. Season revision: The season is refreshed in place with contiguous blocks from 2026-10-21 through 2027-08-31, the block starts on 2026-10-21, tomorrow, nextWeek and nextBlock stay null, and the response mentions Atlas in the season goal and rationale. Block 1 changes are modest: the name is unchanged, the focus only gains burnout language, and the rationale is generic and never names Atlas or the 200 km April brevet. The season leaves the 4-month disciplined-training ceiling unaddressed, gives Atlas only about five weeks of specific preparation, and does not clearly place the April 200 km brevet. Week and today content is coherent with the supplied data and grounded in the activities, but its rationales are thin and Atlas appears only in today's optional rationale.

TODAY PLAN

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "This is your second strength session of the week, focusing on establishing a safe and effective hip-hinge pattern and building unilateral leg strength. After a 5-minute warm-up of light cardio and dynamic movements, perform the main circuit. Take 90-120 seconds of rest between all sets, allowing your heart rate to drop below 110 bpm.\n\n*   **A1: Elevated Rack/Trap-Bar Pulls:** 3 sets x 8-10 reps. Set the bar just below knee height. Start with a very light weight to perfect a flat-back hip hinge before adding load.\n*   **A2: Bodyweight Split Squats:** 2 sets x 10-12 reps per side. Focus on control and stability.\n*   **B1: Dumbbell Bench Press:** 3 sets x 10-12 reps.\n*   **B2: Single-Arm Dumbbell Row:** 3 sets x 10-12 reps per side.\n*   **C: Core Circuit:** 3 rounds of 10-12 Pallof Press reps per side and a 30-45 second plank.\n\nConclude with your 8-minute daily hip and spine mobility routine.",
    "rationale": "Today's Gym Strength B session introduces the elevated hip hinge (rack/trap-bar pull) to safely rebuild the posterior chain strength essential for a powerful, pain-free cycling posture. Paired with unilateral work like split squats and rows, this workout directly addresses your core stability and flexibility goals, forming the foundation for injury prevention and supporting your primary objective of fat loss through increased lean muscle mass.",
    "optional": false,
    "optionalRationale": "This session is critical for your goals of eliminating back pain and improving cycling posture. The elevated pulls begin the process of safely re-patterning your hip hinge, which is the root cause of your back issues. Skipping this workout would mean delaying the foundational strength work needed to support your back on long climbs and would miss a key opportunity to build the lean muscle that accelerates fat loss."
  }

Combined judgment: Today plan: The JSON is valid and matches the requested today shape, and the planned gym session on 2026-10-30 with moderate intensity, 45 minutes, 30 TSS, 220 W FTP, indoor flag and null bikeWorkout is faithful to the plan. The exercise selection is sensible and respects the coach's limits, such as two split-squat sets and knee-height pulls, and the athlete's request for exact exercises, sets and reps is met. Weaknesses: rest periods of 60 seconds for most exercises conflict with the coach's 90 to 120 second guidance for keeping heart rate low before sets, loads are left vague ('moderate load') with no progression or stop criteria, and the rationale does not connect much to the fat-loss goal or the upcoming 2 hour hike. Season revision: The response names Atlas in the season goal, the block rationale and the Winter Build and Brevet blocks, keeps block 1 starting on 2026-10-21, and leaves tomorrow, nextWeek and nextBlock null as required. However, the season end date stays at 2027-04-04 and no block covers Paris-Brest-Paris in August 2027, even though the goal text mentions it. The Atlas race falls at the end of block 3 with no post-race recovery or taper, and the four-month training ceiling is acknowledged in prose but not built into the block structure. Several rationales are meta-commentary (for example, the refreshed season and the recap of what you respected), and phrases such as hike-a-bike resilience and brick-style days are loosely grounded in the input.

  "season": {
    "goal": "Build the aerobic durability, technical efficiency, and resilience needed to finish the Atlas
Mountain Race on 2027-02-28, comfortably complete the April 200 km brevet, and stay on track for Paris-
Brest-Paris later in 2027.",
    "rationale": "The refreshed season links your February Atlas Mountain Race, the April 200 km brevet, and
the later Paris-Brest-Paris build while respecting your self-reported four-month consistency window by
alternating higher-load phases with purposeful deloads and varied cross-training so motivation stays high.
The opening aerobic-base block emphasises cadence discipline, easy strength, and consistent execution so the
next blocks can layer threshold work and winter cross-training without runaway fatigue. The winter build
integrates skiing/running to keep you mentally fresh while holding cycling specificity. The sustained-power
block straddles January-February to sharpen long-ride fueling, hike-a-bike resilience, and equipment
handling ahead of Atlas. A brevet-specific block then converts that fitness into back-to-back endurance
durability before a focused taper that protects freshness for the April 200 km ride.",

Mentions Atlas **pass**

Block 1 changed or Atlas question asked **pass**

Block 1 starts 2026-10-21 **pass**

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.4/2 · Design 1.3/3 · Rationale 1.4/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate matches the required date, planned status, gym workout type, 45-minute duration, moderate intensity, non-outdoor flags, 220 W FTP estimate and null bikeWorkout, and it follows the weekly plan's caps such as two split-squat sets. The exercise list is specific with sets, reps, rest and a heart-rate recovery cue, but the rack pull load is only described as light and controlled, with no load guidance or stop conditions. The rationale ties the session to lower-back durability, sit-bone pressure and carpentry, which is grounded, though it omits the goblet squat progression the plan and recent feedback referenced. Season revision: The season names Atlas in its goal and in the AMR-specific blocks, block 1 still starts on 2026-10-21, the blocks tile contiguously through 2027-08-29, and the current week has seven sessions with today's session matching. However, block 1 is barely changed: its focus and weeks 2 to 7 are essentially the old text, and the block rationale only rewords the prior one. The season ignores the athlete's stated four-month ceiling by running disciplined training continuously for about ten months with no planned reset, and the AMR peak block ends one week after the 28 February race with no explicit pre-race taper. The coachQuestion about mountain bikes and winter gear is not necessary and the completed-session descriptions partly restate analysis.

    "goal": "Successfully complete the Atlas Mountain Race in February 2027, comfortably finish a spring randonneur brevet series starting with a 200 km in April, and peak for Paris-Brest-Paris in August 2027.",
    "rationale": "Your season is structured around two major endurance milestones: the Atlas Mountain Race on February 28, 2027, and Paris-Brest-Paris in August 2027, interspersed with a spring randonneur brevet series. To accommodate your historical four-month limit for maintaining disciplined training progress, the season is divided into highly distinct, motivating phases. We begin with an indoor-focused aerobic and strength foundation, transition to winter cross-training and off-road specificity, peak for the rugged demands of the Atlas Mountain Race, and then shift to road-specific randonneuring volume. This progressive variation keeps training fresh, prevents mental burnout, and systematically builds the extreme durability required for self-supported ultra-endurance events.",

openai/gpt-5.6-luna

9.1/12.5

OpenAI: GPT-5.6 Luna

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	A+	37.0 s	$0.00608	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00630	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 0.9/2 · Design 1.2/3 · Rationale 1.5/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate returns only the requested today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, FTP of 220 W and a 30 TSS estimate that match the plan. The exercise list follows the week outline and the athlete's stated back constraints, with sets, reps, rest, a heart-rate gate below 110 bpm and a stop-if-back-pain rule. Weaknesses: the rack pulls and lat pulldowns say light or controlled load with no concrete load guidance, and the description does not give a load progression anchored to the athlete's previous lat pulldown work at 50 kg. Season revision: The output keeps the eight-key structure, block 1 starting on 2026-10-21, seven week sessions, a matching today session, empty bodyMetrics and null tomorrow, nextWeek and nextBlock, and it names Atlas in the season goal, block 3 and the block 1 rationale. Block 1 is effectively unchanged: its weeks and targets are copied from the supplied plan and only the rationale text differs, so the requirement for a genuinely changed block 1 is weakly met. The season ends on 2027-04-04 and omits any Paris-Brest-Paris build or August 2027 endpoint, and block 3 ends on the Atlas date with no taper before the race, which is a weak design response to the new goal. The four-month ceiling is not explicitly managed across the roughly six-month continuous run of blocks 1 to 3. Week and today content is coherent and grounded in the logged activities and the forecast, with sensible indoor placement for today.

TODAY PLAN

qwen/qwen3.5-plus-02-15

9.1/12.5

Qwen: Qwen3.5 Plus 2026-02-15

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
E	C	A	256.9 s	$0.0323	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00651	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.7/3 · Rationale 1.4/2 · Grounding 1.3/2 · Detail 1.3/2

Combined judgment: Today plan: The session matches the plan on date, status, type, intensity, 45 minutes, indoor flag, FTP of 220 W, TSS of 30, and a null bikeWorkout, and the exercises follow the week's specified elevated pulls and two split-squat sets. The description gives concrete sets, reps, rest periods, a heart-rate recovery cue, and a stop rule for quad burn, which fits the athlete's requested strength specificity. Weaknesses are that it adds a non-schema rationale field inside today, gives no load guidance or assumption for the pull and lat weights despite the athlete's history of 12 kg goblet squats and 50 kg lat pulldowns, and the optional rationale is fairly generic about skipping. Season revision: The output is valid, keeps the eight keys, leaves tomorrow, nextWeek and nextBlock null, starts block 1 on 2026-10-21, and tiles the later blocks through 2027-08-31 with Atlas named in the season goal and a new Atlas Mountain Race Build block. However, the current block is essentially unchanged apart from shifted week start dates, and its focus and rationale never name Atlas, so the Atlas adaptation is weak. The block week start dates are also misaligned with the current week, since week 2 starts 2026-10-28 while the current week starts 2026-10-26. Monday's rest session is marked completed rather than rest, and the season invents altitude and heat-adaptation goals the athlete did not supply. The 4-month limit is not explicitly reconciled with a continuous season running to August.

TODAY PLAN

qwen/qwen3.6-27b

Qwen: Qwen3.6 27B

9.1/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	165.1 s	$0.0371	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00640	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.8/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 0.9/2

Combined judgment: Today plan: The JSON is clean and the today object matches the planned Friday gym session on 2026-10-30 with status planned, 45 minutes, moderate intensity, indoor flags and FTP 220 W, and no activity is invented for today. The session is a reasonable posterior-chain and core workout that respects the lower-back history, but the prescription lacks rep counts and load guidance, and the athlete asked for very specific exercises, sets and reps. The core slot offers an either-or choice between Pallof presses and planks instead of committing to one exercise. The rationale is grounded in the back pain and saddle-posture goals, and the 90 to 120 second rest with a heart-rate cue is useful execution detail. Season revision: The response is valid JSON with the eight keys, seven week sessions, a matching today session, an empty bodyMetrics array, and block 1 correctly starting on 2026-10-21. Atlas appears in the season goal and rationale and the season now sequences the Atlas race before a transition block, which is a credible response to the new goal. Weaknesses: block 1 is barely changed (only its rationale moved), so the requirement for a genuinely changed block 1 is only weakly met, and no block name or focus names Atlas. The later season blocks have weekCount errors (the 2027-04-12 to 2027-06-06 block is about 8 weeks but lists 9, and the 2027-06-07 to 2027-08-28 block is about 12 weeks but lists 11), and the season rationale contains some change-narration ('now targets'). The current week and today's session are coherent and grounded in the supplied activities, with past sessions and FTP handled correctly.

TODAY PLAN

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

perplexity/sonar-reasoning-pro

9.1/12.5

Perplexity: Sonar Reasoning Pro

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	141.9 s	$0.0963	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00591	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.9/2 · Design 1.7/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is valid, uses the requested today object with the correct date, planned status, workout and moderate enum values, and outdoor false with canBeOutdoor false, matching the indoor gym venue and the Friday gym plan. The session lists concrete exercises, sets and a heart-rate ceiling consistent with the coach's earlier caps, but it omits explicit rep counts and loads for most movements and says the session progresses earlier strength work without naming the actual weights or the hinge progression, which weakens execution detail. The rationale is specific to the hip and back goals and sit-bone pressure but overstates the aerodynamic benefit and does not mention the fat-loss or hunger-control logic as concretely as it could. Season revision: Strong points: the output has all eight keys, seven sessions, block 1 still starts on 2026-10-21, Atlas is named in the season goal, season rationale and block focus, and today and tomorrow handling is correct. Weak points: the season end date stays at 2027-04-04 and the season never plans or names Paris-Brest-Paris in August 2027, so the revised season does not cover the second target. The block 1 weeks are largely the old ones with only wording changes, and the Atlas build is generic rather than a visible progression toward 28 February 2027. The merged Wednesday rowing and run session and the Thursday missed workout labelled as an easy workout are minor coherence issues.

    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "45-minute Gym Strength B session at the gym focusing on a safe elevated hip hinge and
core stability to protect your back and improve your cycling posture for long rides. Perform 3 sets of light
elevated rack or trap-bar pulls (bar at knee height) with a neutral, flat back, 2 sets of controlled
bodyweight split squats per leg, 3 sets of glute bridges, 3 sets of lat pulldowns, 3 sets of Pallof presses,
and 3x30-second planks. Keep the overall effort moderate: let your heart rate drop below ~110 bpm between
sets, avoid grinding reps, and stop a set early if your lower back or hips feel threatened. This session
progresses the strength you began earlier in the week while staying low enough in intensity to support fat
loss without triggering post-workout hunger spikes.",
    "optional": false,
    "optionalRationale": "This strength session is a key building block for your season: it develops the
posterior-chain strength and core stability that keep your back comfortable on long climbs, reduce sit-bone
pressure by allowing a slightly more aerodynamic position, and make future cycling, running, and hiking
volume safer. Skipping it would slow your progress toward a resilient back and hips, leaving you more
vulnerable to discomfort and injury during long rides and limiting how much endurance work you can safely
handle for Paris-Brest-Paris and your 5K/10K running goals."
  }
}

{
  "season": {
    "goal": "Build sustainable ultra-distance cycling fitness for the Atlas Mountain Race on 2027-02-28 and
a 200 km brevet in early April 2027, while laying foundations for Paris-Brest-Paris in August 2027.",
    "rationale": "This season uses the October-to-April window to build long-distance durability, efficient
cadence, and low-load strength for your first ultra events while respecting that you typically sustain
disciplined training best over about four months at a time. The opening aerobic base and strength foundation
block consolidates fitness after the three-hour Zwift race and heavy first week, keeping intensity low and
cadence focus high so you can train consistently without stacking fatigue. The winter build and cross-
training block maintains cycling specificity while adding skiing and easy running for extra low-intensity
volume, which improves durability without requiring only bike time. The endurance and sustained-power build
block in January and February progresses longer rides, controlled threshold work, and climbing efficiency so
you can handle repeated long days in the Atlas Mountain Race. The brevet-specific preparation block in March
then focuses on pacing, fueling, climbing cadence, and back-to-back load for the April 200 km, and the final
taper block reduces volume while preserving a strong aerobic base that you can extend toward Paris-Brest-
Paris later in 2027.",

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue,
so you can sustain training into the key months before the Atlas Mountain Race and April brevet.",
    "rationale": "This block starts by consolidating fitness after a high-load week that included a three-
hour Zwift race at very high heart rate, additional activity, strength and pole vaulting, an easy indoor
ride, and a long hike, so the early weeks focus on controlled aerobic work with strict heart-rate caps and
efficient cadence instead of more intensity. Strength sessions remain low-load and carefully logged so leg
fatigue is managed around your cycling and hiking, and missed aerobic minutes are not recovered, which keeps
weekly stress in a range you can sustain for several months. Once you show stable aerobic execution in Weeks
2 and 3, one controlled threshold stimulus enters to support FTP without compromising durability, followed
by a planned deload before rebuilding volume toward 6-7 hours per week. By the end of the block you have a
robust aerobic base, smoother cadence above 85 rpm on flat riding, and a strength foundation that supports
long, hilly days, setting you up for the winter build and later ultra-distance goals.",

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00632	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.6/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.1/2

Combined judgment: Today plan: The candidate matches the planned Friday gym session on date, type, moderate intensity, 45 minutes, indoor flag, TSS and FTP, and it follows the coach's hinge and split-squat modifications with HR cues that come from the recent feedback. The exercise list is sensible, with sets and reps for most movements, but the elevated pulls say only light load and the lat pulldown says use the same progression as last time, so the athlete gets no concrete load guidance. The rationale is tied to the back and saddle-pressure goals but is fairly generic, and the description has few technique cues, stop conditions or fallbacks for pain. Season revision: The candidate names Atlas in the season goal, the season blocks and the season rationale, keeps block 1 starting on 2026-10-21, and the season blocks tile correctly through 2027-04-04. Tomorrow, nextWeek and nextBlock are correctly null, and the week has seven sessions with today matching. However, the current block is effectively unchanged: its name, focus, dates and all seven week entries are carried over verbatim, with only the rationale rewritten, so the required genuinely changed block 1 is not delivered and Atlas preparation does not appear in any block 1 week. The race-specific block is also labelled taper and places the 28 February race mid-block, which weakens the season logic, and the week's shape and today's run are reasonable but thin on specific Atlas-oriented detail. Hard gates failed: block 1 is unchanged.

anthropic/claude-sonnet-4.5

9.1/12.5

Anthropic: Claude Sonnet 4.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	D	63.5 s	$0.1616	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00669	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 0.7/2 · Design 1.9/3 · Rationale 1.5/2 · Grounding 1.1/2 · Detail 1.5/2

Combined judgment: Today plan: The JSON contract, date, status, type, intensity, duration, indoor flags, FTP and TSS all match the plan entry for 2026-10-30, and the session stays within the coach's Week 1 gym constraints. The rationale is specific, linking the hinge work to lower-back pain, sit-bone pressure and the April brevet. Weaknesses: the circuit is internally inconsistent, with 3 rounds stated but split squats limited to 2 sets and no clear timing that fits the 32-minute block. The description also omits any clear load guidance for the pulls and bridges, though it does give useful stop conditions and heart-rate cues. Season revision: The candidate names Atlas throughout, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and builds a credible taper toward the Atlas race with a sensible current week and a detailed today session. However, the season ends on 2027-02-28 and drops Paris-Brest-Paris and the April-to-March brevet series, deferring PBP to a note that a separate season will be built, which the revision request did not ask for. The week's weekday labels are wrong (2026-10-26 is labelled Sunday when it is a Monday, and every following label is shifted by one day), past sessions carry estimatedFtpWatts values where they should be null, and bodyMetrics contains a null-filled entry where an empty array was correct. Hard gates failed: block 1 is unchanged.

    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
```

```
    "bikeWorkout": null,
    "description": "Execute your second gym session of the week, introducing elevated knee-height rack or
trap-bar pulls to safely rebuild your hip hinge pattern without lower-back strain, plus two controlled
bodyweight split-squat sets to protect your quads while building single-leg stability.\n\nWarm-up (8 min): 3
min easy treadmill walk or bike, then 2 rounds of: 8 bodyweight glute bridges, 6 cat-cow spinal waves, 5
deep bodyweight squats.\n\nWorking Circuit (32 min, 3 rounds with 90–120 sec rest between exercises):\n1.
Elevated rack or trap-bar pull from knee height: 3 sets × 8–10 reps at light load (focus on flat-back hip
hinge, letting heart rate drop below 110 bpm between sets)\n2. Loaded glute bridge (barbell or plate on
hips): 3 × 12 reps\n3. Bodyweight split squat (rear foot elevated on low bench): 2 × 8 reps per leg (skip
third set to protect recovering quads)\n4. Pallof press (cable or band, anti-rotation): 3 × 10 reps per
side\n5. Plank hold: 3 × 30 sec\n\nCool-down (5 min): Light stretching focusing on hip flexors and
hamstrings.\n\nFinish with your unrecorded 8-minute hip and spine mobility circuit at home this evening.
Take the full rest intervals so your heart rate drops below 110 bpm before each pulling and squatting set,
and stop the elevated pulls immediately if you feel any lower-back discomfort—your back safety is the
priority as we rebuild the hinge pattern.",
    "optional": false,
    "optionalRationale": "This session directly builds the posterior-chain strength and core stability that
will eliminate your lower-back pain on long climbs and prevent sit-bone blisters by allowing a more
aerodynamic cycling posture toward your April 200 km brevet and August Paris-Brest-Paris goals. Skipping it
leaves your hip hinge weak and your back vulnerable to injury during heavier lifting later in the block,
delaying the postural improvements you need for pain-free long rides. The elevated pull height and capped
split-squat volume protect your recovering lower back and quads while still challenging the glutes,
hamstrings, and core that anchor your cycling position."

Contract 1.0/1.5 · Fidelity 0.7/2 · Design 1.9/3 · Rationale 1.5/2 · Grounding 1.1/2 · Detail 1.5/2

Judgment: The candidate names Atlas throughout, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and builds a credible taper toward the Atlas race with a sensible current week and a detailed today session. However, the season ends on 2027-02-28 and drops Paris-Brest-Paris and the April-to-March brevet series, deferring PBP to a note that a separate season will be built, which the revision request did not ask for. The week's weekday labels are wrong (2026-10-26 is labelled Sunday when it is a Monday, and every following label is shifted by one day), past sessions carry estimatedFtpWatts values where they should be null, and bodyMetrics contains a null-filled entry where an empty array was correct.

{
  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, with durable aerobic fitness, efficient
pacing, climbing strength, and multi-day resilience.",
    "rationale": "The season now targets the Atlas Mountain Race on 28 February 2027 as the primary goal,
with the April 200 km brevet serving as a post-race consolidation event and Paris-Brest-Paris in August as
the long-term objective. The athlete has stated they can maintain disciplined training for a maximum of four
months, usually less, so the plan runs from 21 October 2026 to 28 February 2027 — exactly 18.5 weeks, or
approximately 4.25 months — to respect that constraint while building the fitness needed for a multi-day
mountain ultra-endurance race. The progression emphasizes aerobic durability, sustained climbing power,
fueling under fatigue, and back-to-back load rather than peak threshold fitness, because the Atlas Mountain
Race demands resilience over days rather than a single fast effort. The April brevet will follow as an
easier consolidation ride after the race, and a separate season will be built for Paris-Brest-Paris when
this one ends.",

  "block": {
    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "This seven-week block builds the aerobic foundation and movement durability needed for the
Atlas Mountain Race's multi-day climbing and endurance demands. The athlete's stated four-month training
tolerance means every week must deliver measurable progress without accumulating fatigue that forces a
break, so the block emphasizes controlled aerobic work capped below 140 bpm, cadence above 85 rpm from the
first minute, and low-load strength that supports climbing without interfering with riding. Week 1 delivered
approximately 587 TSS including an unplanned three-hour race, so Week 2 reduced load to 180-220 TSS with
strict heart-rate control. Week 3 introduces one controlled threshold stimulus, Week 4 deloads, and Weeks 5-
7 progress endurance volume and sustained power conservatively. The 225 W FTP baseline is retained because
no fresh threshold test or sustained power evidence justifies a change, and the block avoids the aggressive
progression that has previously caused the athlete to lose consistency.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through the Atlas Mountain Race's multi-day climbing.",

9.1/12.5

Google: Gemini 3.1 Pro Preview Custom Tools

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	D	70.3 s	$0.2109	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00637	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.4/2 · Design 1.7/3 · Rationale 1.3/2 · Grounding 1.6/2 · Detail 1.0/2

Combined judgment: Today plan: The candidate returns a clean today object with the correct date, planned status, gym-based indoor flags, 45 minutes, moderate intensity and the planned 30 TSS and 220 W FTP. The exercise selection follows the plan's Strength B progression with rack or trap-bar pulls, limited split squats, lat pulldowns, Pallof presses and planks, and it includes useful rest and heart-rate guidance. However, the user asked for very specific strength prescriptions with exercises, sets and reps, and the description gives no sets, reps or load progression for most movements, which weakens design and detail. The rationale links the session to back pain and saddle discomfort, but it does not address the specific hunger and fat-loss context that the plan emphasises. Season revision: The season is rebuilt around the Atlas Mountain Race on 28 February 2027 with a post-AMR reset, a spring brevet block and a PBP build, and the blocks tile contiguously from the season start to 2027-08-29. Block 1 still starts on 2026-10-21 and the JSON contract, seven-session week, null tomorrow, nextWeek and nextBlock, and empty bodyMetrics are all correct. Weaknesses: block 1 is largely unchanged apart from its rationale, the block rationale uses meta-commentary about what remains unchanged and what was adjusted, and the first block's weeks barely reflect Atlas preparation beyond wording. Today's session is a reasonable easy run with its completion context and the week keeps a sensible shape, but the Atlas-specific load progression is only sketched in the outline. Hard gates failed: block 1 is unchanged.

minimax/minimax-m2

MiniMax: MiniMax M2

9.0/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	165.2 s	$0.0153	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00707	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.2/1.5 · Fidelity 0.6/2 · Design 2.0/3 · Rationale 1.4/2 · Grounding 1.2/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is valid, the date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and null bikeWorkout all match the current plan for 2026-10-30. The rationale is specific to the athlete's lower-back and hip-hinge goals and the block structure, and the session uses the elevated pull and split-squat progressions the plan calls for. The main weakness is that the description omits sets and reps for the rack pulls, cable rows, Pallof presses and planks, even though the athlete explicitly asked for very specific strength prescriptions. Only the rest interval and the mobility follow-up are concretely stated, so execution detail and progression guidance are thin. Season revision: The plan names Atlas, keeps block 1 starting on 2026-10-21, changes the block, and the season blocks tile through 2027-08-23. However, the candidate fills tomorrow, nextWeek and nextBlock even though the supplied values were null and the request said to keep them as supplied, a clear fidelity failure. The season rationale promises a three-week taper that does not exist as a block, and the Thursday interval list sums to about 77 minutes against a stated 70 minutes. The claim of 20+ hour Atlas events and the 115-135 W power targets on an outline day are not grounded in the input.

  "season": {
    "goal": "Complete the Atlas Mountain Race on February 28, 2027, and build toward Paris-Brest-Paris in
August 2027, supported by the ability to comfortably finish a 200 km randonneur brevet in April 2027.",
    "rationale": "The athlete's goal has expanded from a single 200 km brevet to two major ultra-endurance
events: the Atlas Mountain Race in late February and Paris-Brest-Paris in August, with an intermediate 200
km brevet as preparation. These are significantly more demanding than initially planned, requiring specific
preparation for mountainous ultra-endurance terrain and extended sustained efforts. The season is
restructured into four blocks that respect the athlete's constraint of maintaining disciplined training for
a maximum of four months: a nine-week ultra-endurance base that peaks before the Atlas race, a focused race-
specific block that brings peak fitness to February 28, a three-week taper that also serves as recovery from
the Atlas effort, and an endurance block leading into PBP that rebuilds fitness from mid-March onward. This
blocks-forward approach ensures the athlete peaks twice within the season rather than once, while the
conservative progression in the current aerobic base block remains appropriate given the recent higher-than-
planned load from the Zwift race and pole vaulting activity.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week's structure is unchanged and appropriate: strength sessions on Tuesday and Friday
maintain movement quality without stacking aerobic load, Wednesday's double of rowing and running adds low-
fatigue cross-training, Thursday's missed trainer ride is not recovered to preserve freshness, Saturday's 2h
05min hike substituted for the planned endurance ride while staying within the 140 bpm ceiling, and Sunday's
30-minute easy run closes the week without adding meaningful fatigue before Week 3's first threshold
stimulus. Every aerobic effort stayed under the 140 bpm ceiling, so the athlete arrives at today's session
and the coming week with low accumulated fatigue. The week's remaining priority of cadence above 85 rpm from
the first minute of every ride carries forward, because repeatable efficiency at low intensity builds the
aerobic durability that carries you through 200 km brevets and eventually through the Atlas Mountain Race.",

nvidia/nemotron-3.5-super-vl

9.0/12.5

NVIDIA: Nemotron 3.5 Super VL

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	211.5 s	$0.0252	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00646	anthropic/claude-haiku-5.5

Mentions Atlas	pass	
Block 1 changed	FAIL	
Block 1 starts 2026-10-21	pass	

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.2/2 · Design 1.5/3 · Rationale 1.2/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON is clean, uses the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags and the 220 W FTP, and it matches the Friday gym session in the plan. The session has a sensible hinge-focused structure with rest and heart-rate guidance drawn from the coach feedback, but it is thin on prescription: the split squats, glute bridges, Pallof presses and planks lack reps or loads, and there is no load progression or stop condition, despite the athlete asking for very specific sets and reps. The rationale is specific to the lower back and saddle pressure, though it touches the fat-loss goal only lightly. Season revision: The response names Atlas in the season goal, season rationale, and block 3 focus, keeps block 1 starting on 2026-10-21, and keeps the top-level shape, seven week sessions, and null tomorrow, nextWeek, and nextBlock. Its weakness is design: the season has no dedicated Atlas taper or recovery before 28 February 2027, and block 4 is a brevet-prep block placed after the race. The season rationale also says blocks are seven weeks or fewer, which contradicts the 12-week PBP Endurance Build block. Block 1 is only lightly changed, mainly its rationale, while its weeks and focus are carried over largely as supplied, and the rationales read partly as commentary on what changed. Hard gates failed: block 1 is unchanged.

Meta: Muse Glimmer 30B

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	A	136.7 s	$0.0339	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00617	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean, dated 2026-10-30, planned with no invented completed activity, and matches the 45-minute moderate indoor gym workout, 220 W FTP and 30 TSS in the plan. The exercise selection follows the block (elevated trap-bar pulls, two bodyweight split squat sets, core work), with sets, reps and rest given. Weaknesses: the core circuit is tied to an assumed continuation of Strength A without that being in the input, the pull load is just light with no starting load or progression guidance, and there are no stop conditions or fallback for back or quad pain. The rationale is specific and grounded in the back, hiking and Zone 1-2 cycling goals. Season revision: The response names Atlas in the season goal, season rationale and block rationale, keeps block 1 starting on 2026-10-21, and returns a valid, complete contract with seven week sessions and correctly null tomorrow, nextWeek and nextBlock. However, the season was not really re-planned: the blocks, including the brevet preparation and taper, still end on 2027-04-04 and are not tied to the 28 February Atlas date, and Paris-Brest-Paris in August 2027 is absent from the season dates and blocks. Block 1 changed only in its rationale while its weeks and targets are unchanged, so the Atlas adjustment is thin and the design does not show a credible build to the race. Hard gates failed: block 1 is unchanged.

Contract 1.5/1.5 · Fidelity 1.8/2 · Design 2.3/3 · Rationale 1.8/2 · Grounding 1.7/2 · Detail 1.4/2

Judgment: The JSON is clean, dated 2026-10-30, planned with no invented completed activity, and matches the 45-minute moderate indoor gym workout, 220 W FTP and 30 TSS in the plan. The exercise selection follows the block (elevated trap-bar pulls, two bodyweight split squat sets, core work), with sets, reps and rest given. Weaknesses: the core circuit is tied to an assumed continuation of Strength A without that being in the input, the pull load is just light with no starting load or progression guidance, and there are no stop conditions or fallback for back or quad pain. The rationale is specific and grounded in the back, hiking and Zone 1-2 cycling goals.

    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "45-minute indoor gym session focused on safe hip hinge progression and core stability to protect your lower back for long rides and hikes. 5-minute dynamic warm-up. Elevated knee-height trap-bar rack pull 3 sets x 6 reps with a light load you can control with a flat back and neutral spine; rest 90–120 seconds between sets to let heart rate drop below 110 bpm. Bodyweight split squat 2 sets x 10 reps per leg with controlled tempo; rest 90 seconds. Core stability circuit – assuming continuation of your Strength A core work – Pallof press 3 sets x 10 reps per side and dead bug 3 sets x 8 reps per side, 60–90 sec rest. Finish with your daily 8-minute hip/spine mobility circuit unrecorded. Prioritize form over load.",
    "optional": false,
    "optionalRationale": "This session builds the posterior-chain resilience and flat-back hip hinge control that lets you stay upright on long climbs without loading your sit bones and spares your lower back on Saturday’s 2-hour hike and Sunday’s Zone 1–2 ride. It also reinforces core anti-rotation stability that improves cycling posture and reduces back ache, supporting the Autumn Re-Entry block’s fat-loss and back durability goals. Skipping it means you lose this week’s hinge progression, leave your back more vulnerable to fatigue on the weekend endurance work, and slow the neuromuscular foundation you need for the April 200 km brevet and Paris-Brest-Paris in August."

Contract 1.4/1.5 · Fidelity 0.9/2 · Design 1.1/3 · Rationale 1.4/2 · Grounding 1.6/2 · Detail 1.1/2

Judgment: The response names Atlas in the season goal, season rationale and block rationale, keeps block 1 starting on 2026-10-21, and returns a valid, complete contract with seven week sessions and correctly null tomorrow, nextWeek and nextBlock. However, the season was not really re-planned: the blocks, including the brevet preparation and taper, still end on 2027-04-04 and are not tied to the 28 February Atlas date, and Paris-Brest-Paris in August 2027 is absent from the season dates and blocks. Block 1 changed only in its rationale while its weeks and targets are unchanged, so the Atlas adjustment is thin and the design does not show a credible build to the race.

Qwen: Qwen3.6 Plus

9.0/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	B	287.1 s	$0.0422	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00597	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.5/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.2/2

Combined judgment: Today plan: The JSON contract is valid and the today object matches the planned 2026-10-30 Gym session with the correct moderate intensity, 45 minutes, indoor flag, and TSS of 30, though the title Gym Strength B is a slight rename of the planned Gym session. The exercise prescription is concrete and mostly grounded in the athlete's feedback (elevated rack pulls instead of floor deadlifts, split squats, lat pulldowns, Pallof, planks, rest until HR below 110), but it omits the goblet squat work that the plan's Week 1 structure calls for and adds rest-period and HR guidance that is reasonable but not fully sourced. The optionalRationale is specific to posterior chain and lower-back goals, while the claim about resting metabolic rate is a generic addition. Season revision: The response mentions Atlas in the season and keeps block 1 starting on 2026-10-21, and the season blocks tile contiguously from the start date through 2027-08-15 with the April brevet and PBP retained. However, block 1 is essentially the supplied block with only minor rationale edits, so it is not genuinely changed to accommodate the Atlas goal and its name and focus never mention Atlas. The season has no taper or deliberate peak before the 28 February Atlas race, and the Atlas block ends on the race date with no reduction. Today's session and the completed-week sessions are sound and grounded in the supplied data, but the week is largely unchanged and the current-week rationale never addresses Atlas. Hard gates failed: block 1 is unchanged.

    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is what carries you through 200 km in April.",

x-ai/grok-build-0.1

SpaceXAI: Grok Build 0.1

9.0/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	B	B	115.2 s	$0.0664	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00687	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 0.9/1.5 · Fidelity 1.0/2 · Design 1.4/3 · Rationale 1.3/2 · Grounding 1.5/2 · Detail 1.3/2

Combined judgment: Today plan: The JSON is valid and the today object matches the 2026-10-30 planned 45-minute indoor gym session, with correct FTP, TSS, indoor flag and null bikeWorkout. The exercise selection follows the block's conservative hinge progression, with 2 split-squat sets, rest until heart rate falls below 110 bpm, and a cap on load. The weakest parts are the vague load guidance (choose 20-40 kg with no progression or RPE target) and the rationale, which is specific about back and posture goals but does not tie the session to the week's target load. Season revision: The candidate names Atlas throughout the season, the block names and the rationale, keeps block 1 starting on 2026-10-21, leaves tomorrow, nextWeek and nextBlock null, and keeps the current week and today coherent with the supplied facts. Its main failure is that the refreshed season ends on 2027-04-04 and drops Paris-Brest-Paris in August 2027 entirely, so the season no longer covers the stated goal. It also does not address the athlete's four-month ceiling beyond a single sentence, since blocks 1 to 3 run continuously to race day, and block 1 is barely changed for Atlas. The output carries ten top-level keys rather than the eight the revision request lists, and the block rationale wrongly cites feedback after Week 2 that has not yet happened.

TODAY PLAN

    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "45-minute gym strength session. Warm up with 5 minutes of light cardio or dynamic
movements. Perform 3 sets of 8-10 reps elevated knee-height rack pulls or trap-bar pulls at a conservative
weight (choose 20-40 kg to maintain perfect flat-back form throughout), resting 90-120 seconds between sets
```

```
until heart rate drops below 110 bpm. Follow with 2 sets of 10-12 bodyweight split squats per leg. Include 3 sets of 12 glute bridges, 3 sets of 10-12 reps lat pulldowns or seated rows at moderate weight, and 3 sets of 30-second planks. Prioritize controlled form and lower-back protection on all hinges. Keep overall effort moderate.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge mechanics and posterior-chain endurance that directly support your core strength and flexibility goals, enabling a more aerodynamic cycling position without back pain or sit-bone blisters on long rides. It advances the Autumn Re-Entry block's focus on conservative strength to establish a multimodal foundation without injury risk while supporting steady fat loss through better muscle efficiency. Skipping it would mean losing the specific adaptation in controlled elevated pulls and split squats that prevents back strain and builds quad tolerance needed for consistent training, delaying progress toward pain-free long-distance cycling and the 2027 season goals."
  }
}

aion-labs/aion-3.5-mini

9.0/12.5

AionLabs: Aion 3.5 Mini

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	E	B	801.5 s	$0.0900	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00643	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.3/2 · Design 1.9/3 · Rationale 1.3/2 · Grounding 1.3/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate correctly keeps today as a planned moderate 45-minute indoor gym session matching the week plan, with correct date, enum values, and no extra root keys. The exercise selection follows the block plan (elevated pulls, two bodyweight split-squat sets, lat pulldowns, Pallof, side plank) with sets, reps, rest and HR guidance, though loads like 40 kg and 45 kg are assumed rather than grounded in the recorded lat pulldown history (50 kg top set) and the Pallof and plank details are thin. The rationale is specific to back pain and hinge progression, but it refers to last week's deadlift sidelining in a way that edges toward describing a prior plan change, and the outdoor and canBeOutdoor flags are sensible. Season revision: The season is refreshed around Atlas on 28 February 2027 with contiguous blocks that tile from 2026-10-21 to 2027-08-31, a sensible taper, and PBP retained, and tomorrow, nextWeek and nextBlock are correctly null. However, block 1 is barely changed: its name, focus, and all seven weeks are carried over verbatim, and only the rationale was reworded to mention Atlas, so the block is not genuinely revised for the new goal. The season rationale also opens with meta-commentary about re-planning, and the 200 km brevet in April sits awkwardly against a peak block that begins on 19 April. Today's session is well grounded in the supplied activities, weather and HR ceilings, and past-day statuses are consistent. Hard gates failed: block 1 is unchanged.

TODAY PLAN

9.3/12.5

    "title": "Gym Strength B: Safe Hinge & Core Stability",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
```

```
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Gym Strength B: Start with a 5-minute easy warm-up on a cardio machine (treadmill, bike,
or rower). Main lifts: 1) Elevated knee-height rack or trap-bar pulls: 3 sets of 8 reps at 40 kg (focus on a
flat-back hip hinge; rest 90–120 s until HR < 110 bpm). 2) Bodyweight split squats: 2 sets of 10 reps per
leg (rest 90 s). 3) Lat pulldown: 3 sets of 10 reps at 45 kg (rest 90 s). 4) Pallof press: 3 sets of 10 reps
per side (rest 60 s). 5) Side plank: 2 sets of 30 s per side (rest 60 s). Cool down with 5 minutes of easy
spinning and your 8-minute hip and spine mobility circuit.",
    "optional": false,
    "optionalRationale": "This session builds the safe hip-hinge mechanics and posterior-chain resilience
that directly address your lower-back pain on long climbs and your goal of a pain-free Paris-Brest-Paris. By
keeping the split squats strictly bodyweight and capped at two sets, we protect your quads while they
readapt to loading, ensuring you can absorb next week's volume increase without triggering the quad burn
that sidelined your deadlifts last week. Skipping today's elevated pulls delays the hinge strength you need
to safely progress toward heavier squats and compromises the 5.0–5.5 hour Week 1 target load."
  }
}
```

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a short, controlled run rather than a make-up ride. Missed minutes are not recovered, and
Sunday stays deliberately short so you arrive at Week 3's first controlled threshold stimulus fresh. The 30-
minute run keeps running-specific durability alive at minimal cost, and the week's remaining priority —
cadence above 85 rpm from the first minute of every ride — carries into next week, because repeatable
efficiency at low intensity is the foundation for the Atlas Mountain Race build.",

bytedance-seed/seed-1.6

8.9/12.5

ByteDance Seed: Seed 1.6

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	A	217.2 s	$0.0243	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00631	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.1/2 · Design 1.4/3 · Rationale 1.3/2 · Grounding 1.4/2 · Detail 1.3/2

Combined judgment: Today plan: The candidate keeps the correct date, planned status, workout type, moderate intensity, 45-minute duration, indoor flag and FTP of 220 W, and it returns only the required today object. The gym session follows the plan's Gym Strength B content (elevated rack pulls, two split-squat sets, Pallof, plank) with specific sets, reps and rest, but it adds a 15 kg bar and a 10 kg hip load that were not stated, and the glute bridge and Pallof loads are assumptions without a clear stated basis. The rationale ties the work to back protection and cycling posture, yet it does not mention the lost progress in terms of the block's hinge progression as clearly as it could, and the claim about previous coach guidance is slightly loose. The description is detailed with heart-rate stop targets, though the athlete asked for specific exercises and the candidate did not include a load progression or a fallback for pain. Season revision: The JSON has the required keys, seven week sessions with correct dates, a matching today session, empty bodyMetrics, and a block 1 starting on 2026-10-21 with Atlas named in the block focus and the season. However, the season is weak: block 3 runs to 2027-02-28, the Atlas race day, so there is no taper or reset before Atlas, the April 200 km brevet is dropped from the plan, and the season ends on 2027-08-15 before Paris-Brest-Paris in August. Block 1 changes are mostly rationale and focus wording, and today's description carries meta-commentary about the rain-related indoor choice, though the week and today sessions are otherwise concrete and grounded in the supplied load and heart-rate limits.

TODAY PLAN

9.7/12.5

TIME	COST	RETRY	VALID JSON	HTTP	FINISH
43.4 s	$0.00702	no	yes	200	stop

Contract 1.5/1.5 · Fidelity 1.7/2 · Design 2.0/3 · Rationale 1.5/2 · Grounding 1.4/2 · Detail 1.6/2

Judgment: The candidate keeps the correct date, planned status, workout type, moderate intensity, 45-minute duration, indoor flag and FTP of 220 W, and it returns only the required today object. The gym session follows the plan's Gym Strength B content (elevated rack pulls, two split-squat sets, Pallof, plank) with specific sets, reps and rest, but it adds a 15 kg bar and a 10 kg hip load that were not stated, and the glute bridge and Pallof loads are assumptions without a clear stated basis. The rationale ties the work to back protection and cycling posture, yet it does not mention the lost progress in terms of the block's hinge progression as clearly as it could, and the claim about previous coach guidance is slightly loose. The description is detailed with heart-rate stop targets, though the athlete asked for specific exercises and the candidate did not include a load progression or a fallback for pain.

    "intensity": "moderate",
    "durationMinutes": 45,
```

```
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
    "description": "Very specific 45-minute gym strength session with heart rate targets: 1. Warm-up (5 min: bodyweight squats 2x15, arm circles 2x30 sec forward/backward; heart rate target <100 bpm); 2. Elevated knee-height rack pulls (light 15 kg bar, 3x10 reps; rest 90-120 sec between sets, heart rate <110 bpm before next set); 3. Bodyweight split squats (2x8 reps per leg; rest 90 sec between sets, heart rate <110 bpm before next set); 4. Glute bridges (3x12 reps, 10 kg weight on hips; rest 60 sec between sets); 5. Pallof presses (3x10 reps per side, 12 kg resistance; rest 60 sec between sets); 6. Plank (3x30 sec; rest 45 sec between sets); 7. Cool-down (5 min: gentle stretching for quads, hamstrings, lower back; heart rate target <95 bpm). Complete your unrecorded 8-minute daily hip/spine mobility routine after the session. We assume your lower back is protected by the elevated pull height (no floor deadlifts) per previous coach guidance.",
    "optional": false,
    "optionalRationale": "This session builds safe hip hinge strength and core stability—key adaptations for the Autumn Re-Entry block's multimodal foundation and the week's target load of 5.0-5.5 hours. These adaptations directly reduce cycling sit bone pressure and back ache on long climbs, lower your risk of back injury during carpentry work, and support steady fat loss by keeping effort controlled (avoiding hunger-spiking high intensity). If you skip it, you lose critical progress in correcting your upright cycling posture, delay resolution of your lower back vulnerability, and miss the controlled strength stimulus that complements your low-intensity aerobic work for sustained fat loss."

deepseek/deepseek-chat-v3-0324

8.8/12.5

DeepSeek: DeepSeek V3 0324

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A	A+	87.6 s	$0.0115	yes

HARD GATES	JUDGE COST	JUDGED
FAIL	$0.00609	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed FAIL	Block 1 starts 2026-10-21 pass

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.2/2 · Design 1.5/3 · Rationale 1.1/2 · Grounding 1.4/2 · Detail 1.1/2

Combined judgment: Today plan: The JSON is clean, contains only the today object, and matches the planned Friday gym session on 2026-10-30 in date, status, type, 45 minutes, moderate intensity, indoor flag, 220 W FTP and 30 TSS. The exercise selection follows the plan (elevated hinge pulls, two split-squat sets, Pallof and planks) with explicit sets, reps and rest that reflect the athlete's heart-rate recovery cue. Weaknesses are the absence of a warm-up, no load progression or RPE guidance, no stop condition or pain fallback for the lower back, and a rationale that stays somewhat generic rather than tying the session to the fat-loss goal or the current week's target load. Season revision: The season was refreshed to name Atlas as a block and PBP as a later goal, the block 1 start of 2026-10-21 was kept, and the season blocks tile with no gaps. However, the current block 1 is essentially unchanged in name, focus, weeks and load targets, and its rationale never mentions Atlas, so the block-level revision is weak. The season ignores the athlete's stated four-month ceiling by running disciplined training continuously from October to June with no reset, and it has no Atlas-specific taper before 28 February. Today's session and current week were left almost as supplied, with the week rationale rewritten, and tomorrow and next week and block were correctly left null. Hard gates failed: block 1 is unchanged.

TODAY PLAN

Hard gates: block 1 is unchanged

Combined components (weaker of the two prompts): Contract 1.4/1.5 · Fidelity 1.1/2 · Design 1.4/3 · Rationale 1.1/2 · Grounding 1.3/2 · Detail 1.0/2

Combined judgment: Today plan: The JSON is valid with the requested today object, the correct date, planned status, workout type and moderate intensity, and matches the Friday Gym Strength B slot with the 45-minute duration. The exercise prescription is specific and follows the plan's goblet squat, elevated pull, split squat and core progression with rest and heart-rate guidance, though the 3 sets of Pallof and planks plus a 5-minute warm-up push the content beyond the planned 45 minutes without clear time accounting. The rationale ties the session to back pain, hip mobility and cycling posture, but it does not explain why skipping costs the athlete the specific Week 1 progression, and it omits the weather note that the session is indoors on a rainy day. Overall it is a solid, grounded session with some timing and load-progression gaps. Season revision: The candidate names Atlas in the season goal, the new blocks and the block rationale, keeps block 1 starting on 2026-10-21, and tiles the season contiguously through 2027-08-30. However, block 1 is essentially unchanged: its name, focus, weeks and targets are copied from the input, and only one sentence about Atlas was appended to the rationale, so the required genuinely changed block 1 is weak. The season does not honour the athlete's roughly four-month limit: blocks 2 to 4 run continuously for about ten months, despite the text claiming phased recovery, and the Atlas build is not reflected in the current block's weeks. Today's session and the week are carried over with little Atlas-specific purpose, and the bikepacking framing is an inference not stated by the athlete. Hard gates failed: block 1 is unchanged.

    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue",
    "rationale": "The block name, focus, dates, and seven-week structure remain unchanged, but Week 1 is now
aligned with the actual 19-25 October week and its much higher realized load. The higher load supports a
conservative adjustment to Week 2 rather than an immediate increase in duration or intensity. Aerobic work
remains capped below 140 bpm, cadence should begin above 85 rpm, strength must be logged separately and
either completed fully or deliberately reduced, and missed minutes should not be recovered. A single
controlled threshold stimulus can enter in Week 3 only if Week 2 demonstrates stable aerobic execution,
followed by the planned Week 4 deload. The 225 W FTP baseline is retained because no fresh threshold test or
sustained power evidence justifies a change. This foundational phase is critical for the Atlas Mountain
Race, and respecting your 4-month consistency limit means we build this base without burning out early.",

openai/gpt-5.1-codex-mini

8.8/12.5

OpenAI: GPT-5.1-Codex-Mini

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	C	B	196.9 s	$0.0708	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00623	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.3/1.5 · Fidelity 1.0/2 · Design 1.3/3 · Rationale 1.4/2 · Grounding 1.4/2 · Detail 1.2/2

Combined judgment: Today plan: The candidate returns only the required today object with the correct date, planned status, workout type, moderate intensity, 45 minutes, indoor flags, 30 TSS and 220 W FTP, and it correctly keeps the session as the planned Gym Strength B with bikeWorkout null. The session draws well on the coach feedback, with the 90 to 120 second rest and sub-110 bpm target, elevated pulls, and two bodyweight split-squat sets. Weaknesses are that the pulls have no load guidance or progression, the Pallof and core-hinge plank element is vague, and there are no stop conditions for back or quad pain. The rationale ties the session to posterior-chain and posture goals but gives only a brief statement of what is lost by skipping. Season revision: Atlas is named in the season goal, season rationale and block rationale, block 1 still starts on 2026-10-21, and tomorrow, nextWeek and nextBlock stay null, so the hard checks pass. The season is weak: the end date stays at 2027-04-04 and Paris-Brest-Paris in August 2027 is dropped from the timeline, and the Atlas race on 2027-02-28 is placed as the last day of block 3 with brevet preparation and taper running after it, which is the wrong chronology for a peak event. Block 1 changes mainly in its rationale while its weeks 3 to 7 are essentially unchanged, and past sessions carry estimatedFtpWatts of 0 instead of null.

Mistral Large

8.8/12.5

ABILITY	SPEED	COST GRADE	TOTAL TIME	TOTAL COST	BOTH VALID
F	A+	B	40.8 s	$0.0877	yes

HARD GATES	JUDGE COST	JUDGED
pass	$0.00684	anthropic/claude-haiku-5.5

Mentions Atlas pass	Block 1 changed pass	Block 1 starts 2026-10-21 pass

Combined components (weaker of the two prompts): Contract 1.0/1.5 · Fidelity 1.2/2 · Design 1.8/3 · Rationale 1.1/2 · Grounding 0.7/2 · Detail 1.4/2

Combined judgment: Today plan: The JSON is valid, contains only the today object, and correctly keeps the planned Friday gym session at moderate intensity, 45 minutes, 220 W FTP and an estimated TSS of 30, with the status left as planned since nothing has been recorded today. The exercise list is specific with sets, reps, rest and cues, and it draws on the athlete's lat pulldown progression and the coach's rest and heart-rate feedback. Weaknesses: the suggested rack pull load of about 50 percent of body weight is aggressive for an athlete with a recent back problem who has been told to stay conservative, and the description lacks explicit stop conditions or an RPE target. Season revision: The season now names the Atlas Mountain Race on 28 February 2027 as the primary objective, block 1 starts on 2026-10-21, and the season blocks tile correctly through 2027-08-31 with PBP preserved. However, block 1 is barely changed: its weeks and targetLoad text are essentially the supplied ones, and Atlas appears only in rationale text, with no Atlas-specific taper or recovery after the race. Today's session invents completion data (30 minutes done, 124 bpm average, conversational effort) that the input never supplied, which is a serious grounding failure. Several rationales also describe the revision itself (for example Week 2 is adjusted conservatively), and the contract carries extra top-level keys.

{
  "today": {
    "date": "2026-10-30",
    "status": "planned",
    "title": "Gym Strength B – Safe Hinge & Posterior-Chain Resilience",
    "type": "workout",
    "intensity": "moderate",
    "durationMinutes": 45,
    "outdoor": false,
    "canBeOutdoor": false,
    "estimatedTss": 30,
    "estimatedFtpWatts": 220,
    "bikeWorkout": null,
```

```
    "description": "This session builds your hip-hinge mechanics and posterior-chain resilience while protecting your lower back. After a 10-minute dynamic warm-up (bodyweight squats, cat-cow, hip openers, and banded shoulder dislocations), complete:\n\n1. Elevated Rack Pulls (or Trap-Bar Pulls) – 3 sets x 8 reps at a light-to-moderate load (start with ~50% of your body weight or the empty bar if new to the movement). Focus on a flat back, controlled eccentric, and full hip extension. Rest 90–120 sec between sets, letting your heart rate drop below 110 bpm.\n\n2. Bodyweight Split Squats – 2 sets x 8 reps per leg, emphasizing slow eccentric control and a tall torso. Rest 60 sec between sets.\n\n3. Lat Pulldowns – 3 sets x 10 reps at 50–60% of your 1-rep max (or ~40–50 kg based on your Week 1 progression). Keep your shoulders packed and avoid shrugging. Rest 60 sec.\n\n4. Pallof Press (Anti-Rotation) – 3 sets x 10 reps per side with a moderate band or cable resistance. Hold each rep for 2 sec at full extension. Rest 45 sec.\n\n5. Plank with Shoulder Taps – 3 sets x 20 sec, focusing on minimal hip rotation. Rest 30 sec.\n\nFinish with your 8-minute daily hip/spine mobility circuit: couch stretch (90 sec/side), standing forward fold (90 sec), 90/90 hip rotations (90 sec/side), deep squat hold (90 sec), supine figure-4 stretch (90 sec/side), and cat-cow (60 sec).",
    "optional": false,
    "optionalRationale": "Skipping this session would delay your hip-hinge and posterior-chain resilience, which are critical for eliminating back pain on long climbs and reducing saddle discomfort. The elevated rack/trap-bar pulls and split squats directly address your lower-back vulnerability and upright cycling posture, while the core anti-rotation work (Pallof press) stabilizes your torso for more aerodynamic, pain-free riding. Missing this session would leave your back and hips unprepared for the weekend’s 2-hour hike and the progressive loading in Week 2."
  }

    "name": "Aerobic Base and Strength Foundation",
    "focus": "Build aerobic durability, efficient cadence, and low-load strength without stacking fatigue,
while preparing for the controlled introduction of threshold work in Week 3.",
    "rationale": "The block remains seven weeks long, starting on 2026-10-21, with Week 1 now aligned to the
actual 19-25 October week and its higher realized load. The three-hour race, additional activity, strength
and pole-vaulting session, and long hike produced approximately 587 TSS, so Week 2 is adjusted
conservatively to avoid stacking fatigue. Aerobic work is capped below 140 bpm, cadence must begin above 85
rpm from the first minute of every ride, and strength sessions are logged separately. Week 3 introduces one
controlled threshold stimulus only if Week 2 demonstrates stable aerobic execution. The 225 W FTP baseline
is retained because no fresh threshold test or sustained power evidence justifies a change. The block
prepares you for the winter cross-training phase while ensuring you arrive at the Atlas Mountain Race with
durable aerobic fitness and efficient pedaling.",

  "week": {
    "startDate": "2026-10-26",
    "focus": "Low-fatigue aerobic rebuild with strict heart-rate and cadence control, closing with a short
easy run to maintain running durability at minimal cost.",
    "rationale": "The week has delivered its aerobic purpose without the cadence-specific cycling: Tuesday
and Friday strength sessions, a Wednesday double of 15 minutes of rowing plus a 32-minute easy run, a missed
Thursday trainer ride, and a 2 h 05 min hike on Saturday at 114 bpm average that substituted for the planned
90-minute trainer ride. Every aerobic effort stayed under the 140 bpm ceiling, so fatigue is low and the
week closes with a 30-minute run rather than a make-up ride. The run maintains running-specific durability
that supports your cycling base through the winter and costs almost nothing in fatigue the day after a 2 h
05 min hike. Missed minutes are not recovered, and the week's remaining priority — cadence above 85 rpm from
the first minute of every ride — carries into Week 3, because repeatable efficiency at low intensity is what
carries you through 200 km in April and the Atlas Mountain Race in February.",
